This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

CHAPTER XXIII.

LENGTH OF TEACHERS' SERVICE 1277

CHAPTER XXIV.—CITY SCHOOL SYSTEMS.

General review 1303
Summary, by States, of city school systems 1316
Statistics of population, school enrollment, and attendance in cities of over 8,000 inhabitants 1326
Statistics of supervising officers, teachers, property, etc., in public schools of cities of over 8,000 inhabitants 1343
Receipts of public schools of cities of over 8,000 inhabitants 1362
Expenditures of public schools of cities of over 8,000 inhabitants 1372
Statistics of evening schools in cities of 8,000 population and over 1382
School statistics of cities and villages containing between 4,000 and 8,000 inhabitants 1388
Public kindergartens in cities of over 4,000 inhabitants 1409

CHAPTER XXV.—UNIVERSITIES, COLLEGES, AND TECHNOLOGICAL SCHOOLS.

Number of institutions and courses of study 1417
Professors and instructors 1417
Sabbatical leave of absence for professors 1417
Retiring allowances for officers of universities, colleges, and technological schools 1418
Number of undergraduate and resident graduate students in universities, colleges, and schools of technology from 1889–90 to 1902–3 1422
Foreign students 1423
Subjects pursued by graduate students 1424
Degrees 1424
Property 1425
Purpose and cost of new buildings 1426
Income 1428
State taxation for higher education 1428
Benefactions 1429
Summaries of statistics 1430
Institutions conferring A. B., B. S., Ph. B., and B. L. degrees 1459
Technical courses of study offered by universities, colleges, and schools of technology 1467
Statistics of instructors and students in universities and colleges for men and for both sexes 1472
Students in the various courses of study 1490
Expenses, fellowships and scholarships, property, income, benefactions 1508
Statistics of colleges for women 1538
Statistics of schools of technology 1538

CHAPTER XXVII.—PROFESSIONAL EDUCATION.

General statistical survey 1587
Benefactions and other items from the reports 1590
The law course at Yale University 1592
Five years for A. B. and LL. B. degrees 1592
National conference of law examiners 1593
Recent laws for the establishment of boards of examiners in law 1594
Extracts from the reports of the Mosely Educational Commission 1597
Requirements for the practice of medicine 1612
Requirements for the practice of dentistry 1618
Statistical summaries 1625
Statistics of schools of theology 1632
Law 1640
Medicine 1646
Dentistry 1656
Pharmacy 1660
Veterinary medicine 1664

CHAPTER XXVIII.—STATISTICS OF NORMAL SCHOOLS.

General summary 1667
Universities and colleges reporting students in teachers' training courses 1690
Number of normal students pursuing certain subjects in public normal schools 1698
Statistics of public normal schools 1706
Statistics of private normal schools 1718

CHAPTER XXIX.—STATISTICS OF SECONDARY SCHOOLS.

General summary 1727
Statistics of public high schools 1782
Statistics of private high schools, endowed academies, seminaries, and other private secondary schools 1990

CHAPTER XXX.—MANUAL AND INDUSTRIAL TRAINING.

Number of schools and students 2057
Special and unclassified schools 2058
Cities in which manual training (other than drawing) was given in the public schools 2063
Statistical summaries 2067

AMHERST COLLEGE.

THE EXHIBIT.

The exhibit of Amherst College consisted of the following:

1. Photographs. These included the president and distinguished alumni, the grounds and buildings, laboratories, class rooms, and equipment.

2. Literature for distribution, including catalogues and copies of an illustrated pamphlet describing the college and its work, and giving a brief account of its history and usefulness.

* The common schools of the United States at the exposition are treated of in Chapter XIV of Volume I of this Report. Chapter XV includes the technical schools, art schools, and certain other institutions. The educational systems of foreign countries, as represented at the exposition, are considered in the chapter following the present one (Chapter XXII).

Digitized by Google

BOSTON UNIVERSITY.

BY DR. O. R. CHADWELL.

THE EXHIBIT.

The exhibit from Boston University School of Medicine consisted chiefly of specimens of preserved tissue from the department of pathology and of tracings and charts illustrating laboratory experiments in the department of physiology.

The pathological department sent 100 specimens of the human appendix vermiformis, illustrating the various stages of inflammation. These were mounted in heavy test tubes in a medium composed of Kaiserling's fluid No. 3, to which had been added gelatin to make a solid medium. This method was devised by Dr. W. H. Watters, of the department of pathology, and preserves the original colors of the tissue. There were also Petri dish preparations of other tissues mounted in the same medium.

The physiological laboratory, under the direction of Associate Prof. Arthur W. Weysse, sent tracings illustrating the electro-motive phenomena in muscle, tracings from the sphygmograph, cardiograph, stethograph, and chest pantograph, these tracings all being the results of routine work by the students. The exhibit also contained many photographs of the laboratories, lecture rooms, and dispensary clinical rooms, demonstrating the facilities for the instruction of medical students in a modern medical school.

BRYN MAWR COLLEGE.

THE EXHIBIT.

The exhibit was designed to illustrate the growth of the college during the nineteen years since its foundation in 1885, and to show the standard of the work done by the students.

The nature of the equipment was shown by a map of the grounds, comprising 53 acres, laid out by Messrs. Olmsted & Olmsted, of Brookline, Mass.; photographs, ground plans, architect's drawings, and descriptions of the two academic buildings—Taylor hall and Dalton hall—the six halls of residence, the gymnasium, and the new library building now in course of erection; photographs of laboratories and scientific apparatus designed by the scientific departments, lists of important sets of periodicals in the library, and an account of the special libraries.

The character of the academic work done by the students was shown by a collection of over 400 books, articles, and reviews published by present members of the faculty and present and former students, together with a complete set of the dissertations published by candidates for the degree of doctor of philosophy, and one of the Bryn Mawr College monographs (original research papers) published up to June, 1904; also two volumes of reports on labor and capital by members of the major class in economics, typewritten and bound. A card catalogue of about 3,000 cards, forming an index of articles and documents on subjects connected with economic anthropology, prepared by another class in economics, was exhibited. Examination papers set in different subjects in the May examinations, 1904, and answer books, chosen arbitrarily, were exhibited.

Digitized by Google

The geographical department exhibited maps and surveys of the neighborhood and drawings of fossils collected by the students.

The following statistics and charts were exhibited: Lists of former holders of fellowships, showing academic distinctions gained, and present and past occupations; complete statistics concerning the 600 alumnæ of the college; number of students in each year since the opening of the college; geographical distribution of the 1,745 students who have attended Bryn Mawr College; geographical distribution of present students; the scholarships available for graduates and undergraduates; subjects studied by the students; higher degrees obtained by students; organization and arrangement of the self-government association of students; results of physical training as shown by measurements of students from 1885 to 1904.

THE UNIVERSITY OF CHICAGO.

BY WALTER A. PAYNE.

THE EXHIBIT.

The University of Chicago exhibit was installed in a booth 28 by 28 feet, constructed in a style of architecture (English gothic) expressive of that used in the university buildings. The purpose of the university exhibit was in general to show the material equipment of the university in buildings and grounds, but more particularly to present special features in which excellence has characterized the work of certain departments.

The material equipment of the university in buildings and grounds was presented: First, by a model constructed on a scale of one-sixteenth of an inch to the foot. Second, by a series of enlarged photographs, artistically framed and displayed on the inner walls of the booth, showing interior and exterior features of the buildings.

The features to which special attention was given were:

First. The exhibit of the university press. Special interest attached to this exhibit, because the University of Chicago is the only American institution which maintains as an integral part of the university a department fully equipped for the publication and handling of books and periodicals. The exhibit included 300 books and pamphlets, in which the results of the researches of leading scholars of this and other institutions are presented to the public. In addition the university press publishes 13 periodicals, including The Botanical Gazette, The American Journal of Sociology, The Astrophysical Journal, The Journal of Geology, The Journal of Political Economy, Modern Philology, The American Journal of Semitic Languages and Literatures, The American Journal of Theology, and The School Review. Bound volumes of these were likewise exhibited. Mechanical excellence, as well as scholarship, is one of the characteristic features of these publications.

Second. The exhibit from Ryerson physical laboratory. This consisted of three parts:

(*a*) The interferometer, the invention of A. A. Michelson, which has revolutionized the science of exact measurement. It also gave, in Professor Michelson's hands, our first knowledge of the distribution of light in spectral lines.

(*b*) The echelon spectroscope, also the invention of A. A. Michelson, which has

Digitized by Google

opened up a new and extremely fertile field of investigation. Most of the important recent researches upon the nature of radiation have been made through the application of the principle of the echelon.

(*c*) The harmonic analyzer, the invention of A. A. Michelson and S. W. Stratton, the first thoroughly successful machine for the resolution of complex curves into their simple harmonic elements, or the synthesis of complex curves from their simple harmonic elements.

Third. The astronomical exhibit. This consisted of 56 glass positives suitably illuminated by concealed electric lights, and presenting some of the results of reseach work done by members of the faculty of this department in Yerkes Observatory at Williams Bay, Wisconsin. A number of transparencies effectively illustrated the instruments in use at the observatory and the buildings themselves. The features which could be exhibited by this institution only, were large-sized photographs of the sun taken with the spectro-heliograph in monochromatic light (calcium H and K), displaying the distribution of the calcium flocculi at different solar levels. Large photographs of the moon and of nebulæ, as well as large-scale spectra with vertical enlargement, all of superior excellence, were exhibited. The spectra of the fourth type have never elsewhere been attained in equal perfection. The two large transparencies of regions in the Milky Way, obtained with the unique Bruce photographic telescope, were of unsurpassed excellence. The entire exhibit was compactly arranged in a small dark room, and was well calculated to give the observer a clear idea of the progress made in modern astronomy.

CHRISTIAN BROTHERS COLLEGE, ST. LOUIS.

THE EXHIBIT.

The exhibit of this college was installed in answer to the circular issued by Mr. Howard J. Rogers, chief of the department of education and social economy. The faculty of the college had purposed making a joint exhibit with the other colleges under charge of the Christian Brothers in the United States, but this plan was not carried into effect.

The exhibits are the actual class work of the students enrolled in the science and arts departments of the college. They include synopses of lessons given in mathematics, literature, the modern languages, mechanical engineering, and drawing. There are 14 volumes of papers on the advanced topics of the regular courses in the higher mathematics, including some fundamental work in descriptive geometry. The standard problems on the higher curves are well developed and neatly illustrated. There are 6 volumes on the subject of physics, representing experimental studies and problems in micrometric and volumetric measurements, as also a fairly complete synopsis of the results of the students' work in static and dynamic electricity. There are 14 small volumes of notes on chemistry, representing the laboratory work of the students in the freshman year of the college course. No attempt was made to elaborate the regular class requirements by adding to the exhibit any special form of experimental work accomplished outside of the requirements imposed upon the students during the regular work of the course.

There were exhibited about 100 specimens of mechanical drawing, ranging from the simpler studies in geometric drawing to the more elaborate types of

Digitized by Google

architectural and professional work. Topographical studies of the grounds, and drawings of the buildings and surroundings of the college, appear among the more developed forms of student skill in this portion of the exhibit. Pen-and-ink sketches and free-hand drawings of objects from life and casts are found in this portion of the exhibit. Eight volumes of literary theme work, and notes on readings made by the students of the junior and senior years, with a few volumes on Christian doctrine and philosophy, represent the type of work required in the last two years of the course.

There are 8 volumes of papers divided about equally as regards the study of the modern languages, Spanish, French, and German. These volumes contain grammatical forms, translations of the standard classical works, and colloquial lessons representing the method pursued in the teaching and study of these specialties.

The exhibit is valuable as suggesting a course of study believed to be quite suited to the practical as well as to the theoretical adaptation of the modern collegiate programme to the uses of the professional specialist and the man of general usefulness.

The college has tried to show, not its best possibilities, but its actual results in the working of its system. It has aimed to unite the practical with a well-defined theoretical ideal, and in doing so has given due recognition to the principle which underlies its methods and its purposes.

COLUMBIA UNIVERSITY.

BY CLYDE FURST.

THE EXHIBIT.

The main exhibit of Columbia University occupied an area of some 1,200 square feet in the center of the education building, facing the main aisle and bounded by two other aisles. It was thus possible to have entrances on three sides of the inclosing pavilion, which was designed by the university architects in classic style with panels, columns, cornices, pediments, and bas-relief decorations. The exterior was finished in an ivory tint; the interior wall surface was covered with soft green burlap; the furniture was of antique oak.

The decorative scheme was continued by a plaster model of the Low library building, which occupied an elevated position in the center of the room; by a half life-size model of Mr. French's statue of alma mater, placed at the center of the rear wall; and by large photographs of the university buildings, singly and in groups, and perspective plans of proposed architectural developments hung over the cabinets and cases that lined the walls.

Within these cabinets, and upon four pedestals opposite each of the corners of the library model, were placed some 500 swinging frames, giving a general view of the university's varied activities by means of diagrams, and showing the growth, original residence, previous academic training, and later distribution of the student body; the number and character of the degrees granted; general university organization, administration, and cost of maintenance; the constitution of the different university faculties, schools, and departments; along with many figures, maps, and plans illustrating lecture room, seminar, laboratory, and museum equipment, apparatus, methods of procedure, and results. There were special collections of such material for the several university sum-

Digitized by Google

mer excursions, schools, and camps for practice work, and for the schools of observation and practice of teachers' college, the department of education.

Flat and upright cases about the walls displayed models, apparatus, and characteristic specimens from the university's museums. The department of physics exhibited specimens of radio-active minerals, and of apparatus for their study and application, with explanatory statements and diagrams. Other departments, such as those of chemistry, electricity, and mining, made special exhibits in other buildings. The Government exhibits in psychology and anthropology were in charge of representatives of the Columbia departments. Other cases in the university exhibit displayed specimen results of student work in astronomy, geology, engineering, and in fine and applied art, and in domestic art and science.

The resources of the university library were illustrated by selections from special collections, while the literary activities of the university were indicated by a collection of some 500 series, journals, and single works issued by the university press, by particular departments, or by individual officers of instruction. The written results of student investigation and research were also shown, and a special table was devoted to undergraduate publications.

The seriously intellectual character of the exhibit was balanced by the artistic features already mentioned, and by the addition of comfortable furnishings, and of a writing table for the use of guests. Souvenir pamphlets, describing and illustrating the university, were provided for distribution, and a custodian was present to give whatever further information might be desired concerning the exposition and the university.

CORNELL UNIVERSITY.

BY T. F. CRANE.

THE EXHIBIT.

Cornell University consists of a graduate department and eight separate colleges, namely, the college of arts and sciences, the college of law, the medical college, the New York State Veterinary College, the college of agriculture, the college of architecture, the college of civil engineering, and the Sibley College of Mechanical Engineering and Mechanic Arts. One of these colleges—the medical college—has also a separate establishment in the city of New York. The difficulty of an equitable representation in an exhibit was increased by the fact that the graduate department, the college of arts and sciences, and the college of law can not be represented adequately in any material manner, and the college of civil engineering and the Sibley College of Mechanical Engineering and Mechanic Arts could not be adequately represented in the space assigned to the exhibit of the university. The committee deemed it unwise to make a full exhibit of any one college at the expense of the others, or to illustrate fully any one part of the educational system of the university, and thus do injustice to the others, by laying emphasis in any one branch of study. The subsequent exhibit of the college of agriculture and of the Sibley College of Mechanical Engineering and Mechanic Arts in the exhibit of the land-grant colleges slightly diminished the above difficulty. The committee therefore determined to prepare a general exhibit of Cornell University, and to present as far as possible a pic-

Digitized by Google

ture of the various activities of the university by means of photographs, charts, and models. In pursuance of this purpose the varied interests of the university were carefully considered and space assigned to each college and department, and photographs were prepared to show, as far as possible, their equipment. To show the relation of the university to the city of Ithaca, as well as the university buildings, other photographs of Ithaca were included and a relief model of the campus in plaster was prepared. The photographs, as finally mounted and impaneled in place on the walls of the space assigned to Cornell University in the educational building, were grouped as follows:

General views of the campus	12
General views of Ithaca	8
Typical views of professors' houses	3
Typical views of fraternity houses	3
Views of buildings for athletic purposes	6
Views of athletic scenes	6
Views illustrating buildings, laboratories, equipment, etc., of—	
College of mechanical engineering	42
College of civil engineering	36
Medical college in New York	12
Medical college in Ithaca	12
Veterinary college, Ithaca	12
Agricultural college	18
College of architecture	12
College of law	6
Department of chemistry	18
Department of physics	12
Department of psychology	12
Modern languages	6
Ancient languages	6
Neurology and physiology	12

As an aid to judging the development of the university, charts and diagrams were prepared showing separate funds of the university, annual income and expenses of the university, number of students each year, number of students in different courses each year, number of students paying tuition and those exempted from tuition, number and kind of degrees conferred, and number of books in university library each year.

As a sample of the exhibits of the separate colleges, it may be said that the college of civil engineering was represented by a model of the canal and hydraulic laboratory, copies of the text-books used in the courses of instruction in the college, charts showing the development of entrance requirements and of the courses of instruction, charts showing the development in attendance and 36 photographs of class rooms, laboratories, etc. The college of architecture was specially represented by a number of large mounted drawings, made by students in the college. The Sibley College exhibit consisted of drawings and blueprints from the departments of marine engineering and machine design, copies of theses, reports by students, photographs of drawing rooms, laboratories, and lecture rooms. The photographs were mounted upon the walls in the exhibit space, while other exhibits were mostly in portfolios. In addition to these photographs, charts, etc., the exhibit consisted of the official publications of Cornell University from the beginning to 1903.

As a tribute to the founders and benefactors of the university, bas-reliefs of Ezra Cornell, Henry W. Sage, Andrew D. White, and Hiram Sibley were

Digitized by Google

modeled and cast in plaster, and framed in appropriately recessed panels on the outside of the booth.

No attendance was provided other than that of the janitor who was responsible for the condition of the booth. A register was provided in which visitors, chiefly alumni, should record their attendance, and substantial and comfortable seats were provided for the accommodation of visitors.

It is extremely difficult to give an exact statement of the expenses of the different parts of the exhibit, but the total amount expended for the general exhibit and for the land-grant colleges exhibit did not exceed $5,700.

FOREST PARK UNIVERSITY.

BY THE PRESIDENT.

THE EXHIBIT.

This exhibit occupied a position with the other women's colleges. Forest Park University is the only school exclusively for women west of the Alleghenies that occupied an entire booth.

A beautiful twisted-oak grille, ornamented by palms, formed the front of the booth. The rear of the booth held a carved black-walnut mantel, the work of the president, Mrs. Anna Sneed Cairns, and on each side were cabinets containing 24 boxes each of classified examination papers of the college and college preparatory courses, which were the regular work of the students, without erasure or making a second copy, nothing being prepared expressly for exhibition. There were also chemistry notebooks, 20 large herbaria, zoological notebooks, and many zoological specimens in alcohol.

The right wall of the booth was occupied by an oil painting of the president and by 42 photographs of the building, grounds, faculty, students, students' rooms, and class room. There were also diplomas in the classic and the Latin-Scientific college courses, diplomas of the college of music, of the school of elocution, and of the college preparatory department.

The south side of the booth was covered with sketches from nature and still life. There was a glass cabinet containing 44 specimens of China painting, such as vases, tankards, plaques, and plates, most artistically done by the art students, and 5 cases containing 125 microscopic slides.

The booth was in charge of a member of the faculty throughout the entire period. Several thousand catalogues were distributed. It was constantly adorned with flowers from the campus and gardens of the university, and was homelike and restful with rocking chairs, and was a constant center of interest throughout the World's Fair. Our register contains the names of those from every nation, especially the Japanese, who examined our work carefully, making notes of our methods.

HARVARD UNIVERSITY.

THE EXHIBIT.

[From The Harvard Graduates' Magazine.]

The space allotted to the entire Harvard exhibit is a rectangular area, measuring about 60 by 30 feet in the building for education and liberal arts. It occupies the prominent position of one of the four corners at the junction of the four main avenues in the center of the building. The three other corners were assigned to Germany, France, and Great Britain. The Harvard area is inclosed by a 4-foot wall from which slender columns extend up to a cornice 17 feet above the floor. It is tastefully painted in white, with gold lettering. At the corner is the main entrance surmounted with the Harvard seal. Within the area the walls are covered with red burlap, the showcases and bookcases being painted ebony-black.

Immediately to the right of the entrance, along the wall, one finds the works of the law school instructors, and on a table are the various university catalogues. Along the opposite wall are the works of Harvard historians and statesmen, the official publications, and the books of members of the faculty. Beyond these, Radcliffe College is represented. In the center of the floor a miniature observatory contains the astronomical exhibit, near which rises a model of the stadium. More than a third of the space is taken up by the medical school. After visiting this, one reaches the chemistry exhibit and, at the left of the entrance, the Blaschka glass flowers.

There are some 10 large photographs of the college yard and buildings.

The university as a whole is represented by the bookcases of official publications of the different departments, a bookcase of writings of historians and statesmen, graduates of the university, and by graphic charts showing growth in numbers of students, instructors, endowments, scholarships and other aids, income and expenditure. The grounds and buildings of the Cambridge departments of the university are shown by a large map.

The faculty of arts and sciences is represented by a bookcase filled with the publications of the members of that faculty, arranged by subjects, not by authors; biographical charts showing growth of the various schools and departments under the faculty in numbers of students, instructors, courses, etc., by copies of the pamphlets of the different schools and departments for free distribution.

The writings of the present faculty of arts and sciences embrace most of the subjects connected with university work, or education in general. In the departments of natural and physical science appear the names of Gray (whose works are included), Goodale, Sargent, Marks, Shaler, Davis, Ward, Trowbridge, Hall, Sabine, and Kennelly. In philosophy and psychology, Royce, Münsterberg, Palmer, and James. In the department of history, Hart, Channing, and Emerton. In music and art, Paine, Norton, and Moore. In education, Eliot, Briggs, and Hanus. In economics, Macvane, Taussig, and Ripley. In language, Toy, Lanman, Smith, Goodwin, Hill, Baker, Sumichrast, White, Wright, Wendell, Francke, Morgan, Lane, Wiener, Kittredge, Allen, Grandgent, Santayana, and others. In mathematics, Byerley, the Peirces, Osgood, and Bôcher. In ethics, Peabody, the Moores, and J. H. Ropes.

The Jefferson physical laboratory has a small historical exhibit, showing

Digitized by Google

photographs of some old machines given to the college by Benjamin Franklin and Count Rumford; also a facsimile of the first college lecture on electricity given by John Winthrop at Harvard in 1764, and a facsimile of a letter by Benjamin Franklin in which he anticipates the modern theory of electricity, and by a volume showing the results of investigation and research done at the laboratory during the past year.

The department of chemistry has a show case containing 200 new substances selected from the large number of preparations made during the research work of the laboratory in the last fifteen years. The six specimens of the Blaschka models of glass flowers, displayed in a separate case, and representing the botanical department, have as usual attracted many visitors. Another object of eager attention is the model of the stadium, made in wood and plaster from the engineer's and architect's drawings, and showing the structure as it will look when completed. The model measures 4 feet 10 inches by 6 feet 4 inches.

The law school is represented by a bookcase of books written by present and past instructors in the law school, and a few graphic charts showing the growth of the school. The Fogg art museum and the Germanic museum contribute photographs of some of their collections. The Arnold arboretum has a large plan and two smaller photographs of the grounds. The department of architecture displays a series of photographs of work done by students.

In the small observatory building, in the center of our space, the astronomical department has its exhibit, which consists mainly of illuminated glass photographs. These have been prepared and arranged, not merely to attract attention as a collection of beautiful pictures of the sky, but to show the various ways in which the large collection of plates covering the sky from pole to pole several times each year, and contained in the photographic library of the observatory, can be rendered useful, and to show also some of the many researches carried on and discoveries made by examinations and measurements of the photographs. The first use of this method of illustrating astronomical work was made by this observatory at the Paris Exposition of 1900. It has here been greatly extended and has been adopted at St. Louis by several other observatories.

An octagonal building, enclosed in a cylinder 14 feet in diameter, represents an observatory surmounted by a dome. The exhibit is divided into sections which cover five of the inner walls of the building. In each section a printed description, mounted on glass, framed and illuminated, gives the visitor the desired information regarding the photographs. Large pictures of the Cambridge Observatory, the Arequipa station, and the meteorological station on the summit of El Misti have been placed over the three doorways.

On the outside of the building printed descriptions of the observatory, its policy, and its exhibit have been placed. Here also is a description of the methods of exploration of the upper air by means of meteorographs attached to kites, as conducted at the Blue Hill Meteorological Observatory, and a box kite used in the work is suspended over the dome of the building containing this exhibit.

Opposite one of the entrances of this observatory exhibit there is a post on which are hung about 25 photographs and graphic charts of Radcliffe College.

The medical school has the only other exhaustive exhibit, of which Dr. F. B. Mallory gives the following description:

"The most prominent place was given to a large model of the five new Harvard Medical School buildings, showing them as they will appear when the ground is terraced and the fences are in position. This model measures 8 by 7 feet in length and breadth and is mounted on a stand 4 feet high placed in the

Digitized by Google

center of the medical school area and facing more or less directly the two entrances from the side avenues.

"Second in importance to the model was a large water-color drawing giving a plan of the grounds on which the new medical buildings are located, the ground plan of the several buildings, and the sites reserved for the various hospitals which it is hoped will in the course of time be grouped around the school.

"On the other side of the end wall is a diagrammatic representation of the various required and elective courses offered by the school; it shows in particular the concentration method of teaching adopted in the first year and a half.

"The rest of the exhibit is made up of displays obtained from the different departments in the school. Anatomy has furnished several of the newest enlarged papier-maché models of bones and abdominal viscera used for demonstration purposes when instruction is given before large classes.

"In shallow show cases on one side of the exhibition space are the oldest and newest models of the Minot microtomes and also a sample of the special tin case designed for the safer preservation of histological preparations. In several trays are serial sections of bug embryos, such as are furnished the students for study in the course in embryology. In an adjoining compartment is a large series of cultures from the department of comparative pathology of tubercle bacilli obtained from different sources and grown on various media.

"In a long show case on the other side of the inclosed space are the latest working models from the physiological department of all the apparatus which has been designed for student use in the course in physiology. Adjoining it, on a high stand, are three zoetropes illustrating the movements of the stomach and large and small intestines in the process of digestion. The zoetropes are lighted within by electric lights and are run by electric motor.

"Hygiene furnished a series of meter sticks painted in different colors and illustrating a simple method of putting before the student the percentage composition, in centimeters, of various articles of diet; otology, a specimen box containing the series of temporal bones furnished each student for the study of the relations of the various parts of the ear and of the mastoid cells; laryngology, a model of the apparatus used in teaching the student how to examine the larynx, and a series of photographs illustrating its use; and chemistry, a new model of a student's desk as equipped with electric light and electric heat.

"To the general public the model of the new medical school buildings, the plan of the grounds and buildings, and the zoetropes illustrating the movements of the stomach and intestines in digestion proved the greatest attractions."

HOLY CROSS COLLEGE.

BY REV. T. E. MURPHY, S. J.

THE EXHIBIT.

The exhibit of Holy Cross College, Worcester, Mass., covered 64 of the regulation size cabinet cards, filling two cabinets. Two large sketches, framed, one presenting a panoramic view of the college buildings and grounds, the other a view of the new dormitory now in course of erection, were suspended on the wall space above the cabinets. The shelves and show case below the

Digitized by Google

cabinets contained various college publications and sample copies of text-books published by various members of the Jesuit order. The display cards in the wing frames in the cabinets were alternately descriptive and illustrative.

The descriptive cards first in order presented, for the information of the student of education, a list of sources and authorities on the Jesuit system in Latin, French, German, and English from the original and most voluminous down to the latest commentaries and treatises on the subject in the English language. This series was followed by a list of all the colleges in the United States and Canada which are conducted under this system. Then came a full description of all the courses of study offered at Holy Cross, embracing philosophy, Latin, Greek, English, history, mathematics, science, and modern languages. The studies of each college year were also grouped, and the hours devoted to each study were indicated on daily and weekly time schedules. A classification of graduates by professions showed the present occupations of the alumni and the proportion of various careers.

The illustrations were mainly photographs and half tones, mounted directly on the cards, and presenting not only exterior and interior views of buildings, halls, and rooms, but also class groups, society groups, and some individual portraits. The growth of the institution since 1843 was shown by various views of buildings and grounds at different times. The work in science was illustrated by several views of the physics and chemistry laboratories, with students at work, and by photographs of groups of instruments available for use in the various departments of physics. The department of physical culture and athletics was illustrated by several views of the gymnasium, with students at practice, by various athletic groups, souvenir photographs of memorable games, a sketch of the new athletic field, baseball and football posters, and tabulated records of the athletic teams of recent years. The classification of alumni was illustrated by photographs of former students who have attained distinction in the Army or Navy or in the various learned professions. The college societies were illustrated by group pictures of debating teams, scenes from dramatic representations, portraits of editors of the college monthly publication, The Purple, and by a collection of seals, monograms, pennants, etc., used as letter heads. These views were supplemented by charts and diagrams, in colors, showing the growth of attendance and graduation by decades.

A small 8-page illustrated pamphlet was provided for visitors to the exhibit to take away with them as a souvenir. Some of the college bulletins, containing a description of the courses of study, specimen examination papers, a catalogue and classification of alumni, and sample copies of The Purple were also offered for free distribution.

THE UNIVERSITY OF ILLINOIS.

BY PROF. JAMES M. WHITE.

THE EXHIBIT.

The educational exhibit of the University of Illinois occupied a space 30 by 45 feet, or an area of 1,290 square feet, open upon an aisle on its long dimension. Against the back and the two side walls were glass-inclosed cases 7 feet high, and above these were many enlarged photographs in frames, showing the main buildings, views of the campus, etc., together with numerous pictures from the

Digitized by Google

department of art and design, and a set of finely colored plates of the food and game fishes of Illinois. Other cases, seats, and a desk occupied the central area of the space.

The exhibits were classified according to general subjects illustrative of the equipment and work of the colleges of the university from which they came. Prof. James M. White, of the department of architecture, acting by the authority of the university, collected, shipped, and arranged the exhibit. An attendant was on hand to supply published documents and information to visitors.

The exhibit of the college of literature and arts consisted of—

A. Charts representing the growth of the college and the enrollment and work of its various departments.

B. Charts showing the growth of the college as compared with the other colleges of the university.

C. Specimens of work done by students in the department of art and design.

D. Separate histories, in bound volumes, of the growth, the work, and the course of each department of the college.

E. Publications of the faculty.

F. Specimens of students' theses.

G. A carefully prepared index of the periodical literature of education, compiled by the department of education.

Books published by the faculty were, as far as possible, collected and placed on exhibition. Besides these there were also many pamphlets and periodical articles written by members of the faculty. The list was far from being complete, yet there were more than 100 books and bound pamphlets to represent the productive activity of the college faculty.

Specimens of students' theses represented the average work done by writers of undergraduate theses. Several graduate theses of marked merit were also included. These were all bound in half leather.

An index of periodical literature on educational subjects, requiring two or three years to get together, was prepared under the direction of the department of education. The references are by the Dewey system, and the list is thought to be exhaustive for the period it covers.

The exhibit of the college of science contained diagrams and photographs and a set of bound volumes of the contributions to science published by the members of the college faculty, but was otherwise almost wholly illustrative of the work of only one of its eight departments—that of chemistry; and in this it was confined to the results of two lines of investigation which have for some years been closely associated with the work of the department: First, a study of the chemical composition and heating value of the coals of the State, and, second, a sanitary survey of Illinois waters.

The exhibit illustrating the first line of investigation showed four pieces of apparatus developed in the department and designed especially for determining the number of heat units, the per cent of total carbon, the sulphur content, and the coking properties and percentage. The analytical results for 150 samples of Illinois coal were obtained by the aid of these instruments, and chartered in groups corresponding to the seven mine-inspection districts and also according to the geological seams.

Under the second division the sanitary work on the waters of the State was illustrated by four 10-gallon jars of water, each accompanied by a bottled collection showing, in proper proportion, the different mineral constituents held in solution. The four samples illustrated waters from springs, from shallow drift wells, from deep drift water, and from deep rock water.

A very notable feature of this exhibit was a set of charts illustrating the

Digitized by Google

self-purification of the Illinois River, covering considerable periods both before and after the opening of the Chicago drainage canal, and showing, besides the transformations resulting from aeration and oxidation, the tendency of large streams to retain their individuality after uniting, instead of becoming a uniform mixture.

The agricultural portion of the university exhibit was designed to show the comparative produce of Illinois soils expressed in terms of both crops and animal products. The yields shown were of corn, wheat, oats, beans, potatoes, apples, tomatoes, milk, butter, cheese, pork, mutton, and beef.

In addition to house plans, interior, and material for students' work, the household-science department showed the total food value of all these products in terms of proteids, carbohydrates, fats, and total nutrients. The energy content per acre was shown in terms of calories, and the cost per pound of each at the retail price. It also showed the equivalents in total nutrients and in total proteids of a quart of milk as compared with 15 common food materials. Another chart showed a day's ration for one person, according to accepted dietary standards, at a cost of 25 cents for the raw material.

The articles contributed by the college of engineering were arranged in an alcove, partly inclosed by cases for books and for folding frames, on which were placed photographs and diagrams mounted on large cards. A larger case contained the more bulky specimens of the work of students in the engineering shops. Above these cases were placed on the walls enlarged views and some original designs by architectural students.

A large series of good photographs, arranged for convenient examination, presented views of all buildings occupied by the college of engineering, especially of their interiors, showing class and drawing rooms, shops, and laboratories, incidentally illustrating much of the equipment of machines and apparatus. A series of large diagrams and tables afforded full information concerning the very remarkable increase in the number of students in attendance during recent years.

Since the engineering shops form a part of the department of mechanical engineering, the larger and more obvious portion of the entire exhibit was contributed by this department. The shopwork of students comprised a complete series for the course during the first two years in woodwork, forging, foundry work, in the use of machines, and in bench work, progressing from the most elementary to complex forms.

The department of civil engineering furnished an extended series of note and field books, copies of working designs for engineering structures, reports from cement laboratory, and several examples of theses by senior students. Especial care was taken fully to illustrate the course of study in the different branches of surveying, especially in its application to railway engineering and in the economical design and construction of steel bridges.

The exhibits in the department of applied mechanics chiefly consisted of numerous specimens of materials showing the result of experiments on steel, cast iron, wood under various stresses, concrete, and especially paving bricks, to which especial attention has been devoted. To these are added a series of problems in mechanics and another of notebooks on laboratory experiments.

From the department of architecture was sent a series of framed designs by students, mostly prepared as the final work before graduation, and giving evidence of the attainments of each student.

The department of physics contributed photographs of its laboratories and apparatus, sets of students' notebooks in general and advanced physics, and a

Digitized by Google

complete series of the problems devised for students' experiments, the result of many years of experience in this department.

The exhibit of the college of medicine consisted of a large series of normal and pathological specimens and dissections of various portions of the human body. These were mounted so as to show to the best advantage the special peculiarities in each case and so as to secure permanent preservation.

JOHNS HOPKINS UNIVERSITY.

HISTORY AND ORGANIZATION.

The Johns Hopkins University was founded by the munificence of a citizen of Baltimore, Johns Hopkins, who bequeathed the most of his large estate for the establishing of the university and the hospital with which the medical school of the university is closely connected.

The university was opened for the instruction of students in October, 1876. Daniel C. Gilman was the first president, and held the office till his resignation in 1901. He was succeeded by Ira Remsen, the present president. The faculty numbers 160 and the students in attendance are 740; of these, 556 are graduate students.

The buildings of the university are in the heart of Baltimore, and include well-equipped laboratories in physics, chemistry, biology, geology, and psychology, and other halls and buildings for the library, seminaries, class and assembly rooms, and offices. The buildings devoted to the study of medicine are situated on the grounds of the Johns Hopkins Hospital or adjoining. They include laboratories in anatomy, physiology, physiological chemistry, pathology and bacteriology, clinical medicine, and surgery in all their branches.

By the generosity of citizens of Baltimore the university has recently acquired the tract of land known as "Homewood," containing about 176 acres, on the confines of the city, for its future home and the site of its buildings. Plans for the development of this estate are now being made.

The university library contains 120,000 bound volumes and over 100,000 pamphlets and unbound works. The seminary, or departmental, library system has been followed, and the books are arranged (in addition to the general reference library) in ten separate departmental libraries connected with the several seminaries and laboratories. The Peabody Institute Library is near the university buildings and is an important auxiliary.

A distinctive feature of the university has been the attention given to advanced, or graduate, study, to the encouragement of research, the system of fellowships in connection therewith, and the training of teachers for the colleges and higher institutions of learning. Since the foundation 480 persons have been appointed fellows and 623 have taken the degree of doctor of philosophy (most of these latter were also fellows). Almost all these persons are now engaged as professors or teachers in the colleges of this country. Another distinctive feature has been the group system of collegiate or undergraduate instruction.

THE EXHIBIT.

The exhibit of the Johns Hopkins University at the World's Fair at St. Louis was not designed to display its work as a whole, but to illustrate a few of the activities in which the university has been engaged.

Digitized by Google

1. The encouragement of scientific publication. At the time of the foundation of the university there were few opportunities offered in America for the publication of works in pure science. The university, therefore, entered upon this field, both by giving support to the publications of its own members and by the establishment of serials in several departments of science. These serials were not limited to the work of the university, but have afforded a means of publication for a considerable portion of American scientific work for the past twenty-five years. Among these journals are: The American Journal of Mathematics; The American Chemical Journal; The American Journal of Philology; Studies from the Biological Laboratory; Studies in Historical and Political Science; Memoirs from the Biological Laboratory; Contributions to Assyriology; Modern Language Notes; The Journal of Experimental Medicine; Terrestrial Magnetism and Atmospheric Electricity; The Johns Hopkins Hospital Bulletin; The Johns Hopkins Hospital Reports, and the Johns Hopkins University Circulars.

A number of important separate publications have also been issued. Among these are: Rowland's Photographic Map of the Normal Solar Spectrum; the Physical Papers of Professor Rowland; the edition of the Atharva-Veda by Professor Bloomfield; the edition of the Sacred Books of the Old Testament, known as the Polychrome Bible, by Professor Haupt; the series of works on marine biology by Professor Brooks; the reports on Maryland Geology by Professor Clark, and numerous other books and monographs.

The series above named and a collection of the separate publications are exhibited by the university as showing not only its own work in this field, but as representative of the scientific and literary activities of the country for the last twenty-five years.

2. Another phase of the university's work designed to be illustrated is the relation of a university to its environment. From its foundation the relations of this university with the State and municipality have been close. The Maryland geological survey and the Maryland weather service have been under the direction of its professor of geology, and the long series of reports on Maryland geology have been issued here. The work of the Maryland Oyster Commission was also largely in the hands of the professor of biology.

This portion of the exhibit displays the studies of the physical conditions of Maryland, its geology, climatology, etc., with the work of the geological laboratory, and the theses of the graduates, etc.; also the studies of the American oyster, both scientifically and as one of the economic resources of Maryland. The series of geological reports and the series of memoirs and studies devoted to biology are here shown.

3. An example of a scientific investigation in its beginning, progress, and results. From its foundation the university has encouraged research, and has given facilities therefor to its professors and students. An example of a specific investigation is shown. This is the exhibit from the physical laboratory of the researches on the solar spectrum, carried on by Professor Rowland and his associates for many years. Here is shown by examples, from its beginning in this country, the history of the diffraction gratings, both before Professor Rowland's work and as carried forward by him. There are also exhibited Rowland's dividing engine, upon which are ruled the gratings of 6 inches diameter and 21½ feet radius, having 10,000 or 20,000 lines to the inch; the gratings themselves, and photographic map of the spectrum, in making which the gratings are used.

4. Medical research and instruction. The establishment of a medical school was contemplated at the beginning of the university. Its founder was also the founder of the Johns Hopkins Hospital, and he directed that the hospital

Digitized by Google

should form a part of the proposed school of medicine. Accordingly, from 1876 onward special attention was paid to the studies that lead up to the sciences of medicine and surgery, including not only chemistry and physics, but especially biological sciences, as well as pathology and bacteriology.

The medical school was opened for instruction in 1893. The following classes of students are received as candidates for the degree of doctor of medicine: Those who have satisfactorily completed the chemical-biological course which leads to the A. B. degree in this university; graduates of approved colleges, or scientific schools, who furnish evidence that they have acquaintance with Latin and reading knowledge of French and German, and have pursued sufficient courses in physics, chemistry, and biology.

Much attention has been given from the foundation, both in the Johns Hopkins Hospital and in the medical department, to researches in scientific and clinical medicine. The results of these have been published in the volumes of the Johns Hopkins Hospital Reports, the Johns Hopkins Hospital bulletins, the Journal of Experimental Medicine, all maintained by the university, and other scientific journals at home and abroad. Some of these researches are illustrated by the series of plates and drawings in the exhibit. These illustrations have been selected from a large number, and the exhibit has been prepared under the direction of Prof. Howard A. Kelly by Mr. Max Brödel. The long series of bulletins, reports, and journals in the exhibit also illustrate some of the results of the researches carried on in medicine.

UNIVERSITY OF MICHIGAN.

THE EXHIBIT.

The University of Michigan was represented at the Louisiana Purchase Exposition by a main exhibit, placed in the education building, and by a small exhibit of the physical-culture work of women in the physical science building.

In the education building a space 22 by 30 feet was assigned to the university, having frontage on two aisles. On this space a booth, designed by Mr. Albert Kahn, of Detroit, an alumnus of the university, was erected, being built of cypress and stained to resemble weathered oak. On the aisles it presented a central opening, flanked by two low panels filled with green burlap, above which on either side were two windowlike openings, in which were draped madras hangings of dark green and red. Above these and the doorway, extending entirely across the front, was a frieze composed of closely set tall spindles. On the main aisle the coat of arms of the university, supported by suitable scrollwork, surmounted the whole.

Within the booth the floor was stained a dark color and upon it were spread carefully selected oriental rugs of strong coloring. The walls were broken into small panels, filled with dark-green burlap.

The chief motive which actuated the committee having in charge the preparation of the exhibit was to provide a rest room, or social headquarters, for the alumni and students of the university and their friends. No effort was made to crowd the space with exhibits showing the various activities of the university, but the endeavor was made to provide a quiet, beautiful spot where, amid proper surroundings, the large photographs on the walls, showing beauti-

Digitized by Google

ful spots on the campus, the windings of the Huron River, the face of our beloved President, and the seal and coat of arms of the university should awaken pleasant memories of student days.

Upon the tables were spread albums full of photographs. One book was devoted to campus views and the interior of buildings; another was devoted to athletics; a third to fraternities and sororities, and a fourth to general student life as expressed in various societies and celebrations.

To these there was added, for those desirous of inquiring into university statistics, a set of charts showing in various ways the financial conditions of the institution; showing also the growth of attendance by sex and department, the giving of degrees, and the present geographical distribution of students.

There were placed upon exhibit several hundred volumes, containing the chief publications of members of the various faculties, also reprints of scientific articles, theses, and a series of handsomely bound books showing the work of the university bindery.

The engineering department was represented by numerous rolls of large scale blueprints, by an album of photographs specially prepared, and by a large and attractive sample board of student shopwork. To illustrate the equipment in marine engineering there were presented two models of vessels and a model of the large marine tank which is now in process of completion.

The alumni and old students of the university were urged to register in a book provided for that purpose, from which it is expected to make corrections in the alumni catalogue. To all who were interested a specially prepared booklet containing a general history and description of the university, profusely illustrated by cuts, was given. Ten thousand of these were distributed during the season, as well as 2,000 copies of the annual calendar.

It is not possible for the university to measure, in any accurate way, the influence which results from an exhibit at an exposition. The many words of commendation from visitors at the booth, and the pleasure manifested by alumni and friends of the university in availing themselves of the facilities provided for their use, lead to the belief that the money appropriated by the regents of the university, the labors of the committee in charge, and the assistance of alumni and friends in St. Louis were not in vain.

MOUNT HOLYOKE COLLEGE.

THE EXHIBIT.

The exhibit sent by Mount Holyoke College to the St. Louis Exposition, prepared under the direction of a committee of the faculty, was placed in the booth devoted to the exhibits of the colleges of Massachusetts. The exhibit consisted of the following items:

(1) An illuminated inscription commemorating the founding of the institution.

(2) A framed map of the grounds.

(3) Large framed photographs of Mary Lyon hall, Dwight memorial hall, the Plant house with Goodnow Park in the background, and the college choir.

(4) A collection of 150 mounted photographs, including views of the campus; exterior and interior views of the college buildings; photographs of the musical clubs, basket-ball team, and editorial boards; and pictures illustrating the outdoor sports, May-day festivities, and dramatic entertainments.

Digitized by Google

(5) Architects' plans of the physical, chemical, botanical, zoological, and psychological laboratories.

(6) A description of the courses of study, requirements for degrees, etc., printed on large cards, uniform in size with those used for the mounted photographs.

(7) Description of the literary and scientific clubs, uniform with the description of courses of study.

(8) Portfolios containing specimens of students' work, furnished by the departments of art, botany, and zoology.

(9) Student publications (The Mount Holyoke, Llamarada, and the Song Book).

(10) Publications by members of the faculty.

(11) An historical exhibit, consisting chiefly of a chart showing the growth of the institution from its founding, in 1836, to the present time; a copy of the first catalogue; a copy of the Life Story of Mary Lyon; a steel engraving from a portrait of Mary Lyon; a pencil drawing of the original building, and a photograph of this building enlarged, which served the institution as an administrative building and residence hall until it was burned, in 1896.

NEW YORK UNIVERSITY.

BY CHANCELLOR HENRY MITCHELL MACCRACKEN.

THE EXHIBIT AND THE WORK OF THE UNIVERSITY.

New York University makes prominent by her exhibit the following unique features of her work as a university:

First. The adaptation of her plant to the necessities of such a metropolis as New York. The value of land south of Two hundredth street, New York, is too great to permit any university to possess grounds, including land for athletics and for professors' houses, such as are commonly used by undergraduate colleges in every part of the United States. It is absolutely necessary for the medical faculty of a university to be near great hospitals. It is desirable that the school of law should not be at too great a distance from law offices and court-houses, in order to serve most thoroughly the plans and interests of law students.

In view of the above facts New York University has carefully distributed her work so as to occupy three sites forming a triangle, with the apex at University Heights and one angle of the base at Washington square, the other upon First avenue and East Twenty-sixth street. The exhibit at the World's Fair sets forth this triangular arrangement by an elaborate model of the undergraduate ground and buildings at the Heights, a model of the eleven-storied university building at Washington square, and of the medical laboratories upon First avenue near by the great Bellevue Hospital. An experiment that has continued ten years proves that the above distribution of instruction is not only a practicable, but a highly advantageous arrangement.

At the same time New York University maintains graduate instruction for the doctorate of philosophy by authorizing courses to be given at each or all of the three sites of the university as may best suit the convenience of professors and students. It is claimed that this has an advantage over the ordinary

Digitized by Google

[illegible] the professors to a single center of work. The [illegible] professors to lose lecture engagements at sites re[illegible] [illegible] keeps them in touch with the life and [illegible] of [illegible]. They can not become "Professors Dryasdust" if they [illegible] [illegible] in one another's company, brings about [illegible] conferences. In the manner graduate students feel a quickening energy [illegible] environments. Their devotion to science or letters or [illegible] [illegible] because in coming to their lectures they pass [illegible] reading crowd."

New York [illegible] further illustrates, by the exhibit of her undergraduate [illegible], her views in regard to a school of applied science. [illegible] [illegible] into the technological school a considerable pro[illegible] of courses needed for general culture. While it is admitted that a student [illegible] a wide field in a single technological field, yet the work there may be pursued by him in later years which will be wholly given up to technology, while the cultural studies, if not taken in early life, are likely never to be begun.

This fact then is emphasized: In every case the technological student at [illegible] while pursuing his four years of professional study, becomes also a college student. As such he partakes of the college atmosphere and of college privileges. He is a close neighbor to college students who pursue pure science through all their four years, and to those who are pursuing letters or philosophy or history. Experience proves that here, under this system, students of applied science take on, in no small measure, the consciousness of college men who are seeking after liberal culture, even though their chief efforts are directed to the acquirement of professional knowledge.

While, therefore, New York University has planned to maintain all her other professional schools downtown and separate from the undergraduate college, she has taken pains to place the technological school upon the same grounds with the college of arts. Outside of the courses of study, much is offered by a college community that makes for complete education. The many voluntary associations of students for literary, athletic, musical, and social purposes, which flourish here as nowhere else, are valuable not merely for the aims which they profess, but because they train young men to organize, to cooperate with their fellows, to observe and estimate the capabilities of others. In order to enjoy the advantages of such associations, with all their traditions in fullest measure, the school of applied science must be associated with a university.

Second. The exhibit of New York University shows her to be a pioneer in the establishment of a faculty of pedagogy. The pedagogical exhibit shows this faculty to be placed equal in rank to the faculties of the other professional schools. Further, this faculty is authorized to present those who have successfully completed the required work as candidates for the degrees of master and doctor of pedagogy. The maintenance of these degrees is based upon the proposition that there is instruction that should be given the professional teacher that ought not to be required of the candidate for the general degrees of master of arts or doctor of philosophy. Among the courses demanded for such degree which the university does not accept for any other degree are the following: Principles of education, school administration and supervision, contemporary educational literature, research in educational problems, general method, methods in geography, etc., methods in teaching English, methods in spelling, reading, and writing, the physical nature of the child, and educational psychology.

This fact is emphasized: While the master or doctor of pedagogy must first have the college bachelor's degree, and, second, must have pursued studies of

Digitized by Google

graduate character which would be credited in any university for the degrees of master of arts or doctor of philosophy, he must also have successfully pursued studies that are purely professional, which no one would be asked to pursue except with the view of qualifying himself to teach.

Third. The exhibit of New York University shows that this university is unique in its maintenance of a school of commerce, accounts, and finance.

It was founded in the belief that business education, adequately to meet existing and future conditions of civilization, must be placed upon a scientific basis; that traditional methods, office routine, and procedure of control must be traced to their underlying principles; that native genius for trade and finance must be reinforced by a well-grounded knowledge of economics, accountancy, and commercial law; that not only administrators of affairs, but, in due proportion, their assistants, ought each to understand the philosophy as well as the art of his calling and be able to intelligently adapt himself and his work to the exigencies of the commercial and financial world.

In view of the fact that the requirements of the public accountant differ from those of the banker and general business man, this school provides two separate courses of instruction—the course in accounting and the course in commerce and finance. Students have the option of electing either course. Each course covers a period of three years, and regular students, upon graduation from either, receive the degree of bachelor of commercial science.

Fourth. New York University shows a unique feature in her administration in that her corporation has called into existence a women's advisory committee, founded in 1890 and maintained with great success from that time. It refers to this committee the forming of plans and the making of recommendations for the advancement of the university's work for women. All such plans or recommendations, as in the case of those of other committees, are to be reported to and approved by the university corporation. This committee is expected to take an active interest in the various schools of the university which admit women. These are five in number, comprising the graduate school, the school of pedagogy, the school of law, the collegiate division, and the summer school. The women's law class, which is in no sense a part of the university law school, but is technically an extension course in business law endowed for the benefit of women only, is also under the supervision of this committee. This work of New York University is unique in character, and has justified its existence and its liberal endowment by the results accomplished through many years.

ST. LOUIS UNIVERSITY.

THE EXHIBIT.

Jesuit education in the States of the Middle West was represented by a large and varied exhibit in the palace of education. The display was that of St. Louis University and its allied colleges, a total of seven institutions, making up the Missouri Province of the Society of Jesus. The Jesuits settled in Missouri in 1823, and in 1829 established what is now St. Louis University. From it as a center, members of the order went forth to found St. Ignatius College, Chicago, Ill.; St. Xavier College, Cincinnati, Ohio; St. Mary's College, St. Marys, Kans.; Marquette College, Milwaukee, Wis.; Detroit College, Detroit, Mich.; and Creighton University, Omaha, Nebr. Of these institutions, St. Louis University has postgraduate science and divinity schools, and a medical school, while Creighton University has a medical and a law department. The total

Digitized by Google

Digitized by Google

of ophthalmology, who displayed a complete set of diseased eyeballs. This was a rare pathological collection. Another noteworthy collection was that of bacterial cultures of all kinds. A fine collection of crystals was shown, gathered and arranged by the professor of micro-chemistry, Dr. Gustavus D. Hinrichs, who also exhibited the Paris and Vienna editions of his published works.

Perhaps the most interesting feature of the exhibit was the gallery of famous men who had been Jesuit students. In the center was Descartes, surrounded by Galileo, Muratori, Buffon, Boscovich, and Secchi. Among the authors were Tasso, Calderon, Molière, Corneille, Racine, and Le Sage. Bossuet, Fénelon, and Bourdaloue represented the orators. Of popes there were Pius VI, Benedict XIV, and Leo XIII; while Tilly, Condé, Wallenstein, and Turenne were distinguished names among warriors. Near them were the pictures of Francis de Sales, Richelieu, Kemble the tragedian, and La Salle the explorer. Characters in American history were Charles Carroll of Carrollton; Lafayette; Baron Steuben; Rt. Rev. John Carroll, the first American bishop, and Attorney-General Augustus H. Garland.

The most prominent feature of the historical exhibit was two large maps, which showed at a glance the educational and missionary work of the Jesuits from 1566 to 1904 in North America in general and throughout the Louisiana purchase territory in particular. The educational chart revealed the fact that the Jesuits control 37 institutions of higher learning in the United States, 5 in Canada, 4 in Mexico, 2 in Cuba, and 1 each in Jamaica and British Honduras. The religious chart showed wherever a church had been built, a mission established, or a school erected, and represented in a composite way the religious activity of three and a half centuries. It likewise showed that 22 Jesuits were martyred by the Indians from 1566 to 1730, and sketched the outlines of the journeys of Marquette in his historic descent of the Mississippi and the expeditions of De Smet through the wilds of the Northwest. These maps, remarkable for detail as well as for comprehension, were drawn under the direction of the professor of history in St. Louis University.

The archives and museum of St. Louis University displayed several cabinets filled with rare relics, documents, and maps, which cover many events of the early times in America; such was "A New Map of America, made in Amsterdam in 1643," and the original copy of the order of retrocession of the Louisiana territory to France from Spain in 1803. Here, too, was the famous Indian cabinet of Father De Smet, with its priceless curiosities, mainly personal gifts from Indian chiefs; here, also, was the original copy of Father De Smet's map of the Columbia River region, the first ever made of that country. On the walls of the booth were three paintings in oil, commemorative of historic events, "Father De Smet among the Sioux," and his "Journey to the Columbia;" also, Lamprecht's classic painting, "Marquette descending the Mississippi." The United States Government took from this picture its cut for the 1-cent stamp issued during the Trans-Mississippi Exposition. Mention must be made of two large globes, one terrestrial, the other celestial, made in Amsterdam in 1640, by William Blaeuet, and which were the first of their kind brought to the West.

The exhibit as a whole was characteristic of Jesuit education, for it displayed much culture and refinement, and little technique and specialization. This fact gave it a singular interest to educators who compared exhibit with exhibit in the palace of education. Despite the modern tendency to electives and early specialization, the Jesuits have clung to the time-tried system of a liberal education, as the best means to train and refine the intellect and give it harmonious development. The experience of three hundred and fifty years has taught them, as they believe, that specialization, before the mind has been poised and rounded out by the discipline of the classics, cramps and grooves the

Digitized by Google

mind along the narrow rut of some particular phase of study and makes it unfit for the world view of a cultured man. Hence the Jesuit college curriculum strives to develop symmetrically all the faculties of man, so that he may touch life and thought on every side. With the Jesuit system, education is a means, not an end, and its product is not an efficient artisan with a collection of facts, but a scholarly gentleman with a trained intellect. If any new method will more effectively accomplish this end, the Jesuits declare they will be the first to drop the old for the new.

SIMMONS COLLEGE.

BY PRESIDENT HENRY LE FAVOUR.

ORGANIZATION AND WORK.

Simmons College is a technical college for women established under the will of John Simmons, a Boston merchant, who died in 1870. The endowment of the college is valued at the present time at about $2,000,000. The college was incorporated in 1899, and was opened for instruction in 1902. The permanent buildings are situated on The Fenway, Boston.

The college is unique in its purpose of furnishing for women a preparation for those forms of livelihood which require an intellectual training. It corresponds, therefore, to the technical institutes for men. It differs from the institutes which have already been established in that it provides not only the technical subjects of instruction, but also all the essential academic subjects of the usual college programme, which are of the greatest service in furnishing a foundation for the technical education. Its course of study occupies ordinarily four years, and of this time usually about one-third is devoted to technical studies and the remainder to academic subjects, both parts of the programme extending through all of the four years. Briefer programmes in some of the schools are also offered. The requirements for admission consist of graduation from an acceptable high school course, together with special proficiency in certain prescribed subjects which are the most necessary as a foundation for the college work.

Six departments, or schools, have already been organized, namely, (1) household economics, for the training of institutional superintendents, teachers of domestic science, and investigators in the problems connected with this department; (2) secretarial studies for the training of private secretaries; (3) science, for the preparation of teachers of general science; (4) library science, for the training of librarians; (5) social work, for the training of philanthropic or social workers; (6) horticulture, for practical commercial gardening.

SMITH COLLEGE.

BY PROF. JOHN T. STODDARD.

THE EXHIBIT.

The exhibit of Smith College at St. Louis consisted of—

1. A large map of the grounds.

2. Some 140 photographs, showing the college buildings and environment; interiors of assembly hall, with the student audience; of lecture rooms and

Digitized by Google

laboratories, with classes at work; many of the gymnasium, showing classes in physical training, and of the college dwelling houses; also portraits of Miss Sophia Smith, the founder, and of President Seelye.

3. Charts showing—

(*a*) The total number of students, the number of the entering and graduating classes each year since the opening of the college.

(*b*) The relative amounts of required and elective work offered at five-year periods since 1879.

(*c*) Comparative amounts of work offered, lecture and recitation periods, in the several departments of instruction.

(*d*) Comparative amounts of work taken by the students in the several departments.

4. Official circular, pamphlet of information, and alumnæ register.

VASSAR COLLEGE.

BY PRESIDENT JAMES M. TAYLOR.

THE EXHIBIT.

The character of the exhibit of Vassar College at the St. Louis fair was dictated by what we believe to be the chief desiderata in a distinctively collegiate exhibit. What is called for, in our opinion, is not so much the display of the work of the faculty or graduates as a clear setting forth of the equipment of the college; its courses of study and their relations to one another; a more extended statement, possibly, of the methods of several departments; lists of examination papers; and, for the general interest, such photographs, plans, and models as may give to the public an approximate conception of what the college is.

Beginning with this last feature of the exhibit, Vassar College placed on the walls of the space allotted to it 29 photographs, 11 by 14, showing its buildings, a number of interiors, laboratories, etc.; 4 photographs 22 by 28, and 4 28 by 32, showing the buildings and grounds; 1 water color of the new chapel, 26 by 40, and one photograph of the college in 1865, the year in which it was opened. In addition to these it displayed 6 photographs of the work of the equipment of the astronomical observatory. Two models were also exhibited, one of the grounds and buildings, 5 by 4, and a large one of the library building in the course of erection.

On the walls also was exhibited a large chart, 28 by 32, giving all the courses of study departmentally arranged.

By way of illustrating more fully several departments of the college volumes were sent setting forth in detail the methods of the work in biology, English, astronomy, economics, and physical training. Some of these volumes contained a record of the development of the department as well, and in the case of astronomy the publications of the observatory. The department of geology exhibited a series of sections of igneous rocks prepared by the students of the department. Examination papers were sent showing the tests in use in the various departments.

A scrapbook was added later containing large numbers of views taken by students in different parts of the grounds and giving impressions never obtainable from photographers.

WASHINGTON UNIVERSITY.

BY THE CHANCELLOR.

THE EXHIBIT.

The exhibit of Washington University at the World's Fair consisted of a plaster reproduction of the new grounds and buildings of the undergraduate department of the institution; an exhibit of wind-pressure gage by Prof. F. E. Nipher, of the physics department; an apparatus for the determination of free lime in hydraulic cement, by Prof. E. H. Keiser, of the chemical department; an exhibit of the medical and of the dental departments; and exhibits of the St. Louis School of Fine Arts and of the St. Louis Manual Training School, which are parts of the university.

The model of the new grounds and buildings was intended to illustrate the ideas which governed the choice of the style of architecture and the planning of the buildings for the future use of the university. The style of architecture is that called "Tudor Gothic," which, since it allows buildings to be of various shapes and provides light according to the needs of the various rooms, is fitted for use in educational buildings.

The new buildings of Washington University have considerable resemblance to those of Oxford and Cambridge. The material is, for the body of the buildings, a red granite found 60 miles south of the city of St. Louis. For the cut-stone work of the buildings, which appears around openings and on the corners, is used Bedford limestone of Indiana. The general plan of the buildings shows a series of quadrangles. In the center of the whole is the library. To the west of the buildings devoted to instruction appear two quadrangles of dormitories, one quadrangle for men and one quadrangle for women. At the western end of the grounds is a gymnasium and athletic field, in the latter of which there are seats of concrete for 10,000 spectators.

The buildings of the university are long, narrow, and low, the width averaging about 50 feet and the height being two stories. In this way the light everywhere in the buildings is excellent. They are intended somewhat as a protest against the fashion of erecting school buildings of many stories in positions where land is not very valuable. The buildings are all of fireproof construction. The heating and power plant is below the hill on which the buildings of the university are placed, and alongside a railroad track. All the buildings are heated, ventilated, and lighted from this central station, and they are all connected by underground passageways, in which the various pipes and wires are carried. The ventilation is entirely on the plenum system.

WELLESLEY COLLEGE.

THE EXHIBIT.

GROUNDS AND EQUIPMENT.

A large blueprint map suspended over the cases, giving an idea of the distribution of some 40 buildings over the more than 300 acres of grounds, and exhibiting the central heating and sewerage systems.

Digitized by Google

A collection of large photographs in one of the wall cabinets, giving views of buildings and interiors, and calling special attention to the diversity and beauty of the grounds.

INSTRUCTION.

A chart giving the list of departments, and showing by means of platted curves the course of electives since the present system was adopted, in 1896.

A collection of publications by members of the faculty, filling the shelves of one case, and representing nearly all the departments.

Illustrations of the methods of work in a few of the departments.

1. Economics, by a chart of Boston, prepared by students, showing the distribution of nationalities, saloons, churches, etc., and by a set of papers.

2. Geology, by a relief, showing the glacial action by which the site of College Hall was formed, and by trays of minerals arranged for study and identification by students in laboratory work.

3. Zoology, by students' drawings, specimen charts, and photographs, showing the exceptional facilities for the study of birds afforded by the lakes, streams, pools, and woods of Wellesley.

4. Psychology, by charts, giving the results of experimental studies in sound, smell, color, etc.

5. Art, by students' studies of particular schools and painters.

6. Astronomy and physics, by books filled with photographs and descriptive statements of experimental work in observatory and laboratory.

SPECIAL FEATURES OF LIFE AT WELLESLEY.

Illustrations of the social outdoor life, by means of photographs of fêtes and plays of May day, tree day, field day, ice carnival, float, Shakespeare play, junior play, senior garden party, platform dances, and concerts.

Charts and photographs, showing the outdoor work in physical culture, and the organization of the seventeen or more sports carried on independently of a gymnasium.

WESTERN COLLEGE.

THE EXHIBIT.

The Western College, Oxford, Ohio, aimed in its exhibit at St. Louis to present various features of the work and of the life in the college. This was done chiefly through photographs and literature. The aim of the Western College is the development of the all-round woman; not alone the intellectual side, but the spiritual, physical, social, and practical sides have each their apportioned time and place. As far as possible, the opportunities along these different lines were shown in the photographs. There were many views of the beautiful campus of 232 acres, showing the woodland and meadows, the orchard, the tiny lake, the golf links, and the athletic field, all of which offer the best opportunities for healthy out-of-door life. Other views gave some idea of the equipment for thorough college work. There was a view of the library, of the art rooms showing statuary and pictures, and of the literature room with wall photographs of literary masters and Shakespeare mottoes frescoed above them. More prosaic were the views of the laboratories, but to the expert eye their

Digitized by Google

equipment and arrangement showed them adapted to the various uses for which they were planned.

A view of the chapel, showing its beautiful new pipe organ, the groups of growing plants, and the portraits of former presidents and trustees, gave one an idea of the assembly hall.

To illustrate the dramatic and social side of college life, there were photographs of plays and of festivities. Views of tree day, the annual outdoor festival, were presented, showing scenes from As You Like It, Comus, and The Foresters.

Pictures of students' rooms gave evidence of taste and refinement, with the crude poster and signboard absent, while views of the work in domestic science and household economics showed something of the practical life of the college.

The literature consisted chiefly of the college catalogue and the students' publications. The catalogue revealed that for 200 students, coming from all parts of the country, there was a faculty of 26 instructors trained in the best institutions, and that the usual four years' college course was supplemented by excellent departments in music and art and domestic science.

WILLIAMS COLLEGE.

THE EXHIBIT.

The exhibit prepared by Williams College for the Louisiana Purchase Exposition at St. Louis in 1904 consisted of about 100 large photographs of the college buildings, exteriors and interiors, showing the facilities afforded by the various departments as well as the places of public assembly. To these were added some views of the environment of the college in its location among the Berkshire Hills.

A pamphlet was printed, giving a brief historical account of the founding and development of the college, illustrated by half-tone reproductions of many of the large photographs shown. Copies of this pamphlet were placed within reach of all who desired them.

UNIVERSITY OF WISCONSIN.

BY JOHN G. D. MACK.

THE EXHIBIT.

The preparation of the University of Wisconsin exhibit was commenced about October 1, 1903, when a committee from the faculty was appointed by President Van Hise for this purpose.

It was decided by the committee to prepare a series of exhibits under the following classes: (*a*) The material equipment of the university; (*b*) growth and development along various lines; (*c*) finances, and comparisons with other institutions; (*d*) work published by members of the faculty; (*e*) research work; (*f*) students' work; (*g*) student activities.

Digitized by Google

The general details of the above classes were as follows:

(*a*) Material equipment. This included, in so far as it could be shown, buildings, campus, laboratories, and libraries.

The appearance of the campus was shown by a model of the larger portion of it, on a scale of 1:500, the model being about 4 by 8 feet. This was supplemented by a series of enlarged photographs of buildings and views on the campus. The location of the campus relatively to Madison and to the lakes in the immediate vicinity was illustrated by maps prepared for this purpose.

As an illustration of one of a large number of laboratories a model of the steam engineering laboratory in the college of engineering was built. This model was about 4 by 8 feet, a scale of 1:12 being used. The machinery was entirely of metal, complete in all external details, and arranged so that the machinery could be driven by mechanical power, but this feature was not added on account of lack of time. This model and the one of the campus above described were built at the university between November 1, 1903, and March 1, 1904, by Mr. E. H. J. Lorenz, mechanician of the college of engineering, and his assistants.

The library facilities were shown by enlarged photographs of the exterior and interior of the State historical and university libraries and by descriptions of these libraries and others at the university to which access may be had, these descriptions being in books which were distributed at the booth.

(*b*) Growth and development. This was shown by two methods. A series of charts gave graphical and tabular information regarding growth by colleges and departments, location of the accredited schools, distribution of students who have taken higher degrees now teaching in institutions of higher learning, proportion of men and women students, growth of faculty, increase in number of buildings by decades, and other similar statistical information.

The second method noted was a book of 45 octavo pages prepared by Prof. Henry Burrowes Lathrop, associate professor of English literature in this university, entitled "A Study of Higher Education by the State." In addition to the subject-matter described by the title, this book contained a large amount of information on the library and other equipment of the university which it would be impossible to present in any other manner.

(*c*) Finances. The different sources and amount from each of the income of the university and its disbursement were shown by graphical charts. In addition to this charts were prepared showing comparisons of income of a number of American universities and comparative expenditures of different States on higher education, these and all of the other statistical charts and tables having been prepared under the direction of Prof. Thomas Sewall Adams, assistant professor of political economy.

(*d*) Publications of the faculty. An almost complete set of the publications of members of the faculty since 1893 was secured by the committee, this work being in charge of Prof. Frank Chapman Sharp, associate professor of philosophy, under whose direction the collection was classified and indexed. The collection was divided into two classes—publications by present members of the faculty and publications by former members.

(*e*) Research work. A considerable portion of the research work of members of the faculty is included in class *d*, above described. In addition to this there was shown a collection of apparatus which has been devised at the university for research and some of the products of this work.

(*f*) Students' work. The work of students in the university was shown by a representative collection of theses, shop-work specimens, and drawings.

(*g*) Student activities. The activities of student life outside of the regular work in the university were shown by a large collection of pictures of athletic

Digitized by Google

teams, enlarged photographs of games, bound copies of all student publications, including a complete collection of the annual "Badger." This latter gives information regarding the literary societies, fraternities, and other student organizations, and proved of particular interest to alumni visitors. A feature of the exhibit of importance to those who were making a study of State universities was a very complete set of catalogues and reports of the board of regents and of the president.

The exhibit above described was that of the university as a whole, although departments were exhibited in other places. In the collective exhibit of the land-grant colleges in the education building the departments of civil, mechanical, and electrical engineering, dairying, animal husbandry, and agricultural physics had exhibits. The dairy school had another large exhibit in the agricultural building, and the department of geology prepared an exhibit for the exhibit of the United States Geological Survey in the mining building. The sum of $4,000 was appropriated by the board of regents of the university for the university exhibit. In addition to this the Wisconsin world's fair commission, through the committee on educational exhibit, paid for the erection of the booth and a portion of the transportation expenses—about $350—which will make the total expense about $4,350.

THE WOMAN'S COLLEGE OF BALTIMORE.

THE EXHIBIT.

The exhibit of the Woman's College of Baltimore at the St. Louis Exposition is the outgrowth of the desire of the institution to participate in the commemoration of an important historic event.

This institution has previously taken part in five similar events, viz, the expositions at Chicago, Nashville, Atlanta, Buffalo, and Charleston. The St. Louis exhibit is far more select and costly than any of the preceding ones, and is proportionately more representative.

Special points were made of the exhibition of outlines of the courses of study offered, of representative student exercises and publications, of the more important publications of the alumnæ and faculty, of the facilities for physical training, of methods of administration, of plans of buildings and grounds, of exterior and interior views of buildings, of views of the grounds and environs, and of the students at their work and recreation.

The institution began its work in 1888. Without having received any single large benefaction, it has within the past sixteen years grown at such a pace that it now includes among its students representatives from all sections of the United States and several foreign countries. The last graduating class numbered 79, and the value of its plant has reached $1,250,000.

THE WOMAN'S COLLEGE OF FREDERICK, MD.

THE EXHIBIT.

The exhibit of the Woman's College of Frederick, Md., consists of a wall cabinet containing 16 swinging frames, on which are mounted photographs representing buildings, grounds, interiors of offices, recitation rooms, library,

Digitized by Google

laboratories, gymnasium, auditorium, and groups of students, teachers, etc.; also the work of the institution in various lines as far as can be shown pictorially. The contents of the exhibit are interesting as showing the general arrangement and equipment of the institution.

The chief interest of this exhibit attaches to its preparation, which was done entirely within the institution, under the direction of the teacher of science. The general selection of subjects, and the taking, developing, finishing, and mounting of the photographs were all done in this manner. A departure from usual methods was adopted in the mounting of photographs, the prints being first mounted on bevel-edged cards and then in turn on the large cards of the frames.

The lesson taught by the exhibit is chiefly what can be accomplished by a small college at comparatively small cost by relying upon its own resources.

The first similar exhibit was sent to the Pan-American Exposition at Buffalo. The one now at St. Louis is the third prepared, and is somewhat more elaborate in method and aim.

YALE UNIVERSITY.

THE EXHIBIT.

[From the Guide.]

As the visitor enters the Yale booth at the St. Louis Exposition the first thing which attracts his attention is the restoration of a large prehistoric animal, the pterodactyl, which occupies the main part of one of the broad wall spaces. This fossil pterodactyl, or *Pteranodon longiceps*, is a bird-like reptile which lived in the Cretaceous period, millions of years ago, and contemporaneous with the dinosaurs. In life the particular pterodactyl which is here reproduced had a wing stretch of over 14 feet. It is thought that the animal preyed upon small fishes in shallow inland seas. The fossil bones from which this restoration was made were found in western Kansas embedded in the chalk formation. As it stands completed this is the only mounted fossil pterodactyl of the kind in the world. It was prepared for exhibition in the Peabody Museum of Yale University under the direction of Dr. George F. Eaton.

In the middle of the Yale booth stands a complete reproduction of the buildings, gateways, etc., which make up the main college campus at Yale. This model was prepared by Mr. Francis T. Gilling, of Shokan, N. Y. The scale is 12 feet to 1 inch. Everything is exactly reproduced in this model except the large elm trees which form four parallel rows on the campus.

The main wall space opposite the pterodactyl contains several interesting features. At the base is a section of the old Yale fence as it existed during the last generation on the corner where Osborn hall now stands. The present fence, opposite Durfee hall, is an exact reproduction of this original.

Above the fence is a row of 50 engravings, representing the most distinguished graduates of Yale in the past. None of Yale's living graduates are included, as the task of selection would be embarrassing. The alumni chosen, with their college class and position, arranged in order of graduation, are the following:

Jonathan Dickinson, 1706. First president Princeton College.

Samuel Johnston, 1714. First president Kings, now Columbia, College.

Jonathan Edwards, 1720. Metaphysician and theologian.

Philip Livingston, 1737. Signer of the Declaration of Independence.

Digitized by Google

Samuel Hopkins, 1741. Theologian.

Timothy Dwight, 1744. Religious leader.

William Samuel Johnson, 1744. Chairman of committee which drafted the United States Constitution.

Lewis Morris, 1746. Signer of the Declaration of Independence.

Lyman Hall, 1747. Signer of the Declaration of Independence.

Samuel Seabury, 1748. First bishop of the Protestant Episcopal Church in the United States.

Manasseh Cutler, 1765. Botanist and western pioneer.

John Trumbull, 1767. A pioneer in American letters.

David Humphreys, 1771. Washington's aid-de-camp and one of the "Hartford Wits."

Nathan Hale, 1773. The Patriot Spy of the Revolution.

Joel Barlow, 1778. Poet and diplomat.

Oliver Wolcott, 1778. Washington's second Secretary of the Treasury.

Noah Webster, 1778. The lexicographer.

James Kent, 1781. Jurist, chancellor of New York State.

Jeremiah Mason, 1788. Leader of the New England bar.

Eli Whitney, 1792. Inventor of the cotton gin.

Benjamin Silliman, 1796. Scientist.

Lyman Beecher, 1797. Religious leader, father of Henry Ward Beecher.

Noah Porter, 1803. Metaphysician.

John C. Calhoun, 1804. Secretary of State and Vice-President of the United States.

Thomas H. Gallaudet, 1805. Pioneer in instruction of deaf-mutes.

Nathaniel W. Taylor, 1807. Religious leader.

Josiah Willard Gibbs, 1809. Mathematical physicist.

S. F. B. Morse, 1810. Inventor of the electric telegraph.

Joseph E. Worcester, 1811. Editor of Worcester's dictionary.

John M. Clayton, 1815. Secretary of State of the United States.

James G. Percival, 1815. Poet and geologist.

Leonard Bacon, 1820. Religious leader.

Theodore D. Woolsey, 1820. Authority on international law and president of Yale College.

Horace Bushnell, 1827. Preacher and theologian.

Nathaniel P. Willis, 1827. Poet.

F. A. P. Barnard, 1828. Scientist and president of Columbia College.

Henry Barnard, 1830. First United States Commissioner of Education.

Elias Loomis, 1830. Meteorologist.

James D. Dana, 1833. Geologist.

Alphonso Taft, 1833. Attorney-General of the United States.

Thomas A. Thacher, 1835. Professor of Latin at Yale from 1842–1886.

William M. Evarts, 1837. Leader of the American bar and Secretary of State.

Samuel J. Tilden, 1837. Governor of New York and Democratic candidate for the Presidency.

Morrison R. Waite, 1837. Chief Justice of the United States.

James Hadley, 1842. Philologist.

Theodore Winthrop, 1848. Author, first man to be killed in action on the Union side in the civil war.

Hubert A. Newton, 1850. Mathematician and astronomer.

Othniel C. Marsh, 1860. Paleontologist.

Photographs and statistical tables.—Above this group of engravings are two lines of large photographs representing the following departments of Yale University: The college, the Sheffield Scientific School, the school of the fine arts, the school of music, the forest school, the departments of theology, law, and medicine.

In the two corner spaces opposite the pterodactyl are revolving stands, the first of which contains samples of work done in the Yale school of the fine arts, which was the first art school to be established in connection with any university in the world. The second stand contains various statistical tables with reference to the graduates and students of Yale University. The total number of regular students for the current year, omitting summer school students and persons taking teachers' courses, is shown to be 2,963, while the officers of the university are 384 in number, and the total number of graduates from the foundation, about 22,000.

A series of about 21 volumes, published by the officers of the university in 1901, in commemoration of the two hundredth anniversary of the founding of the college, is another interesting exhibit.

Psychological laboratory exhibit.—On each side of the back entrance are charts from the psychological laboratory, which present the methods and results of investigations now in progress or recently completed.

The two charts dealing with eye movements show the first successful application of photography to the study of optical illusions. Three of these illusions are here shown to be figures in which the eye is drawn away from the chief lines by the added, distracting lines.

The chart dealing with writing movements shows the methods of taking up an educational problem in a psychological laboratory. The various parts of different letters and the various types of movement are analyzed and studied with reference to the amount and kind of effort involved in producing them.

Another chart exhibits Professor Scripture's method of dealing with the records made by phonographs and gramophones so as to work out the characteristic vibrations which enter into different articulations.

THE ARGENTINE REPUBLIC.

BY ERNESTO NELSON, OF THE ARGENTINE COMMISSION.

ORGANIZATION.

According to the constitution of the Republic, each State manages its school institutions independently, while the National Government has control over those at the federal capital and in sectional territories.

In the city of Buenos Ayres, the main seat of Argentine culture, primary instruction is conducted either in public schools maintained by the Government or in private institutions under the control and superintendence of the national board of education.

Education for children between 6 and 14 years of age is compulsory, and all children must have their names registered by the secretary of the school district in which they reside, whether they are to attend a public school or a private school. In order to be admitted to school every child is required to present a registration certificate, as well as a medical certificate of vaccination, to the principal of the school. The regular course of instruction begins on the first day of March each year, but children may be admitted at any time, provided that there is room for them in the class to which they rightfully belong.

Primary instruction comprises six grades, covering eight years of school life (two years in grade one and two years in grade three). To avoid the necessity of traveling long distances, there are many schools in the city of Buenos

[a] See footnote to preceding chapter.

Digitized by Google

Ayres where only the first four grades are taught. These are called infant and elementary schools, and number nearly 200. When a child completes his course in these schools, he is transferred to a "superior school," where the six grades are taught. Of these there are 44, two for each school district, one for boys and one for girls, coeducation being allowed only in the first three grades. After the superior schools come the secondary, namely, the national colleges, which prepare the way to the universities, and the normal schools for the training of teachers. Of these normal schools there are three in the city of Buenos Ayres and one in each State. There are two grades of diplomas in these schools, one issued at the end of four years to normal teachers, and the other at the end of six years to graduates, who are called "normal professors."

Besides these regular schools there are also classes for adults, which, as a rule, are open in the evening and are conducted in the primary school buildings, the teachers for the same being always graduates from normal schools. Such classes for adults are also constantly being established on men-of-war, in military barracks, prisons, factories, and in fact everywhere, whenever an attendance of at least 40 pupils over 15 years old may be secured.

No primary school can be kept open where the attendance is below 80 pupils, and each class must have a minimum of attendance as follows: Grades 1 and 2, 25 pupils each; grades 3 and 4, 15 pupils each.

The management and general administration of the public schools are in the hands of the national board of education, which was created in the capital of the Republic in 1881. It is composed of a president and four councilors, appointed by the President of the Republic, and also a secretary appointed by the board itself. The board is assisted by a body of practical and active inspectors selected from among the "normal professors," who have been teaching for years in the public schools. The inspectors are required to visit the schools periodically in order to observe the teachers' efforts, and must write out the results of their observations in a special register which is kept in every public school for such purposes.

The national board of education has complete control over the management of all public schools so far as it relates to superintendence and governmental organization. But in order to have also a local jurisdiction over the schools, district or local boards of education have been established. There are now in existence in the capital 22 such district boards, which correspond to the 22 precincts into which the city has been divided for the convenient administration of all civil and political affairs. The district boards of education superintend the schools that belong to their respective precincts, although they are obliged to consult the national board in all matters that affect the general management and progress of the public schools, especially in regard to the employment of teachers, for which purpose certain formalities must be complied with.

Medical inspection of the schools is under the direction of a body of school physicians, whose duties include the vaccination of the children, the examination of the sanitary conditions of the school buildings, the visiting of sick children in their homes, the taking of all precautions against contagious diseases, and the holding of regular scientific lectures and giving free medical advice to pupils as well as teachers.

A great number of public school buildings are owned by the Government. Their value is estimated at about $12,000,000. The buildings are erected from the permanent school funds of the national board of education, to which funds every month is being added a certain percentage derived from the sale of public lands, from the income of patent dues for public privileges, from taxes, etc.

Digitized by Google

The school buildings are generally named after great men of the Argentine Republic.

The class rooms are large, well lighted and ventilated, accommodating comfortably about 50 pupils. The playgrounds are very large, especially those adjoining the school buildings that have been constructed during the last few years. Some of them have even gardens or land tracts that can be used for school gardening and other suitable exercises.

Each school is managed by a principal and as many grade teachers as there are class rooms in operation. In addition to these there are special teachers who give lessons in French, music, drawing, manual training, and domestic science. In some of the largest schools there is also a secretary to help the principal in discharging his duties. All principals and regular class teachers are graduates of some of the normal schools of the country, or have taken a special examination before the board of education in case they are graduates of some foreign school, in order that they may obtain the necessary diploma. The teachers of music, drawing, foreign languages, and domestic science are generally graduates of special training schools. No teacher can ever be employed for public instruction unless he or she has submitted his or her diploma for competency, a health certificate, and a certificate of good moral character. In case of inefficiency any teacher may be removed or entirely relieved from duty.

There are three grades of salaries for teachers, and in order to reach a higher grade the special merits and accomplishments and the number of years of active and faithful service of the teacher must be taken into consideration, as well as the value of his diploma.

Every teacher remains in service during good behavior, provided that his state of health will allow him to do so. Twenty years of continuous service entitles every teacher to retire from school work with a pension equal to his salary, and in case of poor health the teacher is entitled to this pension privilege even before this regular service term has been reached, but in proportion to the length of service rendered.

In the public schools of Buenos Ayres two different time tables are in operation. The first one, called the "continuous," is to the effect that four consecutive hours are daily set for instruction, either the morning or the afternoon hours, according to the season, being selected for the purpose. This system is intended for grades 3, 4, 5, and 6. The other is the "alternate" system, so called because two groups of children can be taught alternately by the same teacher, making use of the same school material. Under this plan one group receives instruction in the morning, the other in the afternoon, each group for two hours and forty-five minutes. This system, however, is only in operation with the first two grades.

During school hours instruction in principles and facts is interspersed with practical work and physical exercises, with a recess of ten to fifteen minutes every hour. No recitation period is ever over an hour in length.

The present programmes are based upon the cyclic system of teaching. The children are therefore given in the first grades a general idea of all the fundamental knowledge that is to be extended and amplified in the higher grades, step by step, to suit the mental requirements and capacity of each child. The laws provide a minimum amount of compulsory instruction that must be imparted in every Argentine school, whether it be a public or private school. These programmes are subject to change, based upon the opinion of a committee composed of distinguished teachers, members of the technical inspection department, and members of the board of school physicians. The programmes are

Digitized by Google

drawn up in the most concise manner, leaving to every teacher ample opportunity for development of the topics according to the needs of the class.

A list of authorized text-books is made every three years by a committee of examination and adoption. These text-books are not free, but pupils can not be compelled to buy them. Up to the fourth grade the use of any other text-book than the reader is strictly prohibited. In the three last grades different books may be used for any particular course.

The regular pupils are examined twice a year by a body composed of the principal and two teachers, one of whom is always the pupils' regular class teacher; the average of results and of the daily marking determine the pupil's promotion into a higher grade or the partial if not total repetition of the course.

The teachers are required periodically to hold conferences for the purpose of exchanging ideas in regard to matters relating to their work. Twice each month the principal of each school calls his teachers together for a general discussion of the school management, while every month a meeting of teachers from two or more school districts is held, in which one of the teachers generally gives a practical object lesson or reads a paper on a pedagogical subject, followed by general discussion. These meetings are presided over by a district technical inspector.

Three times every year all the teachers of the capital are invited to a general conference, which is held in one of the big theaters or halls, and which is also attended by school authorities and the general public. In such conferences, which are opened by the general technical inspector, new propositions are received which may be suggested by some of the inspectors or principals regarding some educational work, administration, or some disciplinary question, all of which is duly taken into consideration and put to a vote by the president.

El Monitor, an organ of the national board of education, publishes afterwards the questions and final conclusions of the assemblage.

Teachers are required to attend such conferences, and a special law regulates the proceedings.

THE EXHIBIT.

It was decided at such a late date to send an educational exhibit from the Argentine Republic to the Louisiana Purchase Exposition that it was found impossible to represent more than the schools of Buenos Ayres, and the work was collected by the board of education in about fifteen days. It was the purpose of the board of education to show the existing conditions in the Argentine schools by exhibiting school fixtures, tools, materials, and devices used in the work. On account of the lack of space this plan had to be abandoned, and the exhibit was confined chiefly to a display of statistics, school administration, and pupils' work. The board of education issued circulars calling for the work, and it was collected under the direction of the principals of the schools which had signified their willingness to take part.

The exhibit occupied a space of about 700 square feet, and the expense of its installation was about $1,000. Besides the tools and materials, there were shown cinematographic pictures of physical exercises and school games, as well as phonographic records of school songs. The exhibit was arranged by subjects, in order to show the treatment of each subject in the school curriculum.

The principal features of the exhibit were:

1. The reports and proceedings of the popular educational associations, of which there are many in Buenos Ayres, and which are fostering the movement of making the schools social centers.

Digitized by Google

2. Letters written by the children of Buenos Ayres. These letters were translated into English, and the little visitors coming to the booth were invited to reply to them there.

If any one lesson was taught by the exhibit it may have been that the method of "developing" words in the teaching of reading is best adapted to languages in which polysyllabic words are common.

BELGIUM.

BY M. A. GENONCEAUX, CHIEF INSPECTOR OF PRIMARY EDUCATION, BELGIUM, AND MEMBER OF THE JURY OF AWARDS.

[A paper presented before the international jury of awards, group 1, primary education.]

Belgium occupies but a small space on the map of Europe. Nevertheless this small country presents many points of great interest. Belgians have established a high name in art and science; in all periods of history they have bravely and stoutly fought for their independence, and many centuries ago Julius Cæsar did homage to the military virtues of the Belgians of yore.

For seventy-five years Belgium has enjoyed a fruitful peace, loyally respected by its powerful neighbors, and its population has become the most dense of any nation of the globe, namely, one inhabitant per acre. This long era of peace has enabled our wise kings and our governments to work with enthusiasm and success for the continued improvement of the condition of the people—material, intellectual, and moral. Among the economic problems which have stirred the zeal of those who have presided over the country, one of the principal, if not the principal, has been that of the education of the young.

The child of to-day is the man of to-morrow; in ten years, in fifteen years, the pupils now seated on the benches of the primary school will have gone and have been absorbed in society, and they will have become a living force in the nation, some as heads of families, or as voters, hand workers or brain workers, soldiers, citizens. The elementary school, which will serve as the university for the greater number, is then the real pivot on which the education of the people turns. How, then, must this school treat the infant to fit him to take his place usefully in the world? That is the problem we have to solve, and it is one which is before every country.

An exhibition so universal as this which we see housed in this magnificent palace of education shows us the synthesis of the labors realized and the results obtained at the present moment by the civilized nations of the world. We are all of us agreed, is it not so? that the noble sight here given us to admire is of a nature which enlightens us mutually, and that this splendid exhibition of St. Louis marks a new step of progress in a study so important and so complex as that of the education of the young.

Like all the nations here represented we have a system of school organization, which I shall briefly endeavor to explain.

The Belgian constitution, that fundamental contract which can not be suspended by any law, proclaims the liberty of teaching, with prohibition of every antagonistic measure, except, of course, the repression of misdemeanors committed in the exercise of that liberty.

Public education is given at the expense of the State and is regulated by the law. For all that is connected with elementary teaching, with which I am

Digitized by Google

at present specially dealing, the law settles exactly the rights and obligations of all the established authorities (State, province, commune) which cooperate in its execution.

RIGHTS AND OBLIGATIONS OF THE COMMUNES.

All the elementary communal teaching (kindergarten, primary, and adult schools) is directed by the communes. Each commune is represented by a communal council of 7 members at least, and 31 at the most, elected for eight years and renewed by halves every four years. The commune is not under any obligation as regards the establishment and organization of infant and adult schools, but as a matter of fact these institutions are nearly everywhere, even in the small villages.

All our kindergartens are mixed and are taught only by female teachers. We have no mixed adult schools. Those for young men are generally taught by male teachers.

The primary school receives children of 6 to 14 years of age, and it is a legal obligation upon the commune to watch so that all the children who have the right to a free education (about 95 per cent of the child population) and who do not attend a private school may be taught, either in communal or in adopted schools. The latter are private schools which carry on the teaching on the same lines as the public schools and which accept State inspection.

The communes provide the buildings and furniture of the primary schools. They submit previously plans and estimates for the approval of government. The State and the province bear half the total charge, which is about $4,000 or $5,000, for a school with only one class and lodging for the teacher, just as one sees them in our smallest villages.

RULES AND CURRICULUM.

The communal council determines the rules and programme, or curriculum, of primary schools. In general they are satisfied to approve ne varietur the rules and model curriculum published and proposed to the communes by the Government.

TEACHERS.

The appointment, the suspension, the placing on half pay by order, and the revocation of the teachers belong to the communal council. But the teacher can not enter upon his duties until he has been qualified by oath by the governor of the province and after having taken the oath before the State superintendent. Admission by oath is always granted so long as the candidate fulfills all the conditions exacted by law and the council has proceeded to his nomination according to legal prescriptions, of which the following are the principal:

1. The question must appear in the agenda for the day of the assembly.
2. A councilor related in the second degree to a candidate may not take any part in the election.
3. The nomination is made upon a majority vote, after secret balloting.
4. The candidate must be Belgian, provided with the legal diploma of teacher, and be of good life and morals.

Punishments of teachers, other than suspension for a month without loss of pay, are not effective until they have been confirmed by the permanent deputation (an elected council placed at the head of each province). The teacher is always allowed to make his defense, and he can, in the same way as the communal council, appeal to the King, who decides as a sovereign. The King,

Digitized by Google

after having taken the advice of the permanent deputation, the teacher and the communal council being heard, can remove or suspend a communal teacher.

Thus it will be seen how the legislature has surrounded the profession with such guaranties that one may assert that our communal teachers enjoy absolute security in the stability of their position. Their nomination is valid up to the time they arrive at the age for retirement, and no one can arbitrarily deprive them of their position.

ADOPTED PRIVATE SCHOOLS.

The communes are authorized to adopt free schools for ten years at the most. The contract can be renewed. To become adopted, private schools must, as far as possible, fulfill the same conditions that are exacted from the communal schools. The State subsidizes directly private schools not adopted, so long as they fulfill the same conditions and submit themselves to official inspection.

SUPERINTENDENCE.

The instructions and the reports on the nominations of teachers, on disciplinary punishments, on the adoption of schools, on the construction or repair of buildings, and, generally, on all that concerns the service of education, are confided to the State inspectors (superintendents). These officials are selected from among the teaching staff of primary or normal schools, of ten years' service, who hold special diplomas, granted after a searching examination.

There are in Belgium 18 principal inspectors and 85 cantonal inspectors for a school population of about 800,000 children, and about 20,000 teachers of primary schools.

The cantonal superintendents visit the schools of their districts at least twice a year. After each visit they send to the principal inspector a succinct report, which is returned, after visa, for transmission to the authority directing the school. The principal superintendent visits the schools of his district once every two years.

TEACHERS' CONFERENCES.

Once every quarter the cantonal inspector meets in conference the members of the teaching staff within a radius of about 6 miles. There are special meetings for male and for female teachers, also special ones for mistresses of the kindergarten. The first meeting is specially devoted to school legislation. The three others have for their object the study and discussion of some question relative to the teaching of the young, or to psychology, previously dealt with in written papers by the teachers. Teachers selected by lot give to the children of the school where the conference is held two practical lessons, relating, as far as possible, to the theoretic question treated of in the papers of the masters. After the pupils are dismissed these lessons are criticised by the teachers present, under the direction of the inspector. The duration of each conference is about four hours. The report is drawn up by two of the teachers, selected by the president. The attendance at meetings is compulsory on communal teachers. In spite of the difficulties of communication in certain parts of the country the general average is about 90 per cent. Traveling expenses are paid to all the teachers who attend the meetings. At the most central school in each conference circle there is a library established and added to by the State for the use of the teachers. Correspondence between teachers and the superintendents or the librarian is franked through the post, as is also the sending or return of books.

Digitized by Google

DIPLOMA OF INSTRUCTORS—NORMAL SCHOOLS.

I have already said that no one can be appointed to the duties of communal teacher unless he is Belgian and holds the diploma obtained after his normal studies or at the close of an examination covering all the subjects of the four years' curriculum of the normal schools.

The State has established several normal schools for the training of male and female teachers. Pupils are not admitted till after a successful entrance examination, evidence of which they can not present before they have attained the age of 15 years.

The different courses are given by a number of professors, who are charged at the same time to instruct their pupils in the special methods of the branch they teach. A selected professor teaches psychology, pedagogy, and general application of method. The same professor has it in his charge to initiate his normal pupils gradually into the practice of teaching—

First, by model lessons given to children in presence of the normal students and afterwards thoroughly criticised.

Second, by superintending the lessons given daily by the normal students to pupils of the school of application. This is a complete primary school of eight grades, annexed to every normal school.

In our Belgian primary schools, in large towns and important localities, boys and girls are generally separated. In villages, where the population is insufficient to justify the separation of the sexes, the schools are mixed. Mixed and boys' schools are, with rare exceptions, taught by male teachers. Girls' schools are invariably taught by female teachers.

The teachers receive at first only the minimum salary fixed by law, but after each period of four years of good service, passed in the same commune, they have the right to an increase of salary. Generally those who have entered upon the teaching career continue to follow it, and it may be calculated that 60 per cent of those who commence will finish in the same commune. At the age of 55 to 60 years they are entitled to a retiring pension equal to about two-thirds of the highest salary they have received. In addition to his salary the teacher has the right to a suitable dwelling place, or lodging allowance in lieu thereof.

At the beginning of the last century our primary teaching was already organized, even in the smallest villages, but it was, of course, more or less defective.

The school was often a low-ceiled room, badly ventilated, badly lighted, possessing for furniture and scholastic appliances only flat tables and rickety forms. The master was generally engaged for the winter only, and usually elected from among the most intelligent of the humble class. The three R's formed the extreme limit of his teaching, which even in these was of the most rudimentary nature. He taught individually, and that alone is sufficient to explain, first, that the results obtained by the school were of low value; second, that want of discipline reigned through the class, and that order was maintained with difficulty, and only by the aid of the cane, the terrible ferule, or by other punishments the nature of which it is unnecessary to describe.

Like all civilized nations we have progressed, and even in the smallest villages the school catches the eye of the traveler. It is really now a neat building, situated on a healthy site; the schoolroom, well ventilated and lighted, is fitted with suitable furniture and scholastic appliances; varied collections, often formed by the teacher aided by pupils, help to give to the teaching an intuitive basis.

Digitized by Google

Generally a comfortable dwelling is connected with the school, which the teacher, with good taste, does his best to keep neat and orderly. The commune provides also a garden, which serves as an experimental field where the elements of agriculture taught in school are practically explained and demonstrated. The frequent visits to the garden are of great educational value, not only through the exercises given, but specially through cultivating the habit in children of being interested in the book of nature and engendering a love and respect for plants.

For some years we have tried planting the school grounds with different kinds of trees, evergreens, creepers, and flowers. These plants are placed under the protection of the pupils, and we are persuaded that while we are developing the æsthetic education of the young, we are also raising a feeling of respect for public property.

TEACHING MADE A LIFELONG OCCUPATION.

History has recorded, and our museums, galleries, and libraries show us, the work that the Titans of labor wrought in a rude age, and how they identified themselves with their masterpieces, and even gave up their lives in their struggles. In these times we find often in many the same devotion to the material objects of their labors; the engine driver loves his engine, the captain of the ship is attached to his vessel, and, by a similar phenomenon, our teacher who often passes his life in the same school, becomes deeply devoted to it. * * *

When their primary course is completed he receives the pupils as adults in the evening class; he widens their knowledge; he carries them on further; teaches them the customs and warns them of the dangers of life; he seeks to make them contract habits of order, of temperance, foresight, and love of their future profession. After a few years these young people leave the adult school, but the master remains their friend and their counselor.

This is what happens in our villages, and I do not hesitate to say that the chief part of the great influence exercised by the good teachers of our country is due to the permanence of their duties in the same commune.

PROGRAMME OF INSTRUCTION.

If we consider only the total of knowledge to be acquired by the pupils of primary schools, our curriculum is very similar to that adopted by other nations. But our system of popular education presents new features which I must press on your notice.

The first is the concentric distribution of the curriculum, which is realized from the kindergarten onward, and more thoroughly carried out in the primary school. A notion which was taught intuitively in its simplest form at the lower stage returns at the intermediate stage in agreement with the same general scheme, but with a growing number of associations. Finally the same notion reappears at the upper stage, and subsequently at the adult school, with still higher elaboration, obtained by means of suitable applications to the several trades carried on in the place or district. * * *

Another new feature of the Belgian system of popular teaching is the practical tendency in education. This tendency is felt from the kindergarten onward. The building with sticks, bands, cubes, etc., the training in modeling, folding, braiding, weaving, etc., give the children not only manual skill but also correct notions about sizes, combinations, shapes, which are revived later on, in the primary schools, when the teaching has a close reference to the trades in practical life.

Digitized by Google

The tables exhibited in the kindergarten department show the close connection existing between the exercises of observation and elocution on the one hand, and manual occupations on the other. The natural consequence of this connection is that in the child's mind the notion is always closely associated with its verbal expression, always made firmer and clearer by corresponding manual work, which requires an effort of the mind and an action of the senses.

The practical tendency is very prominent in the primary school. Commonplace and remote applications, which do not serve the purpose of initiating the child into the realities and necessities of life, have been given up. All trades provide their quota of practical exercises referring to local wants. By these means no child is left unacquainted with matters relating to its father's business or to its own future occupation; the girl applies her theoretical knowledge to housekeeping and needlework, the boy either to agriculture or to industry, as his future surroundings may require.

The continuation school is conducted still more fully on the principle that school is but a preparation for life. It often consists of special lessons suited to the requirements of the place or district; it is nearly a technical school in smaller places, where workingmen, farmers, mechanics, and housekeepers need some rudiments of technical training.

The carrying out of this idea has brought about a radical change in the methods in vogue in the practice of primary teaching. It is only a few years since the text-book was the great master and the ultimate reference of teachers. They found there all their work ready made, because the book contained both the lesson and the manner of application. Who has not been astonished at the folly of the subjects, of the style, dictation, and problems figuring in the greater number of the text-books put in the hands of the pupils? It is useless to give examples. Everybody knows them—remembers some of them.

To-day the theoretical teaching remains the same as before, but its application differs according to the surroundings. The first duty of the teacher is to study the local industries and their needs, and this study exacts an amount of observation and reflection much greater than one would think at first.

In one place it is agriculture, with its multitudinous specialties, according to the conditions in the districts as determined by geographical situation, such as the industrial cultivation of cereals, potatoes, tobacco, hops, market gardens (near town), the raising of cattle, dairies, etc.

In another place it is the industry which is a specialty characteristic of the locality or region, as determined by the predominance of its vegetable, animal, or mineral products.

The resources and the needs of the district where the teacher finds himself being well determined it is necessary: First, to give the children the general knowledge required for the exercise of their future occupation; second, to interest beforehand the children in their future manual labor by appropriate exercises, which the teacher should almost always be able to devise, including exercises of language, dictation, and style; also problems, drawings, etc.

In our agricultural districts, which are the most numerous, we compel the children from the kindergarten on to love the life of the field. We speak to the child of persons, animals, and the labors of the farm; we show him plants, flowers, and fruits; we exercise his little fingers in reproducing simple objects, such as houses, animals, tools, etc. * * *

This practical influence on the children is marked in greater measure as they advance in age; the school work is pushed on in the midst of the surrounding country, where they observe its resources and needs. After having learned, for example, the general composition of the soil of the district, the teacher makes

Digitized by Google

the pupils, as exactly as possible, acquainted with the constituent elements of such portion of local territory as surrounds them, in order that they should know the necessity of adding here phosphoric acid, there lime, potassium, or nitrogen.

They understand, in the same way, the connection which exists between the constituent elements of the soil, the vegetable productions of nature, and the size of domestic animals. * * *

As far as possible, the teaching is fixed by experiments carried out in the garden of the school, or in certain small fields placed gratuitously at the disposal of the instructors in the different parts of the village. * * *

To carry all this out demands great insight, great initiative genius, and much personal effort. We can not assert that all our teachers have met with equal success in this respect, but the good ones have tackled the subject with enthusiasm, and you can see by the specimens here exhibited the manner in which they seek to develop this new idea and to give to the primary studies a practical tendency.

I will only say a word on our method of teaching. It has for its main end to teach the child to observe, to reason, and to express correctly his own observations, his own judgments.

We exact that our teachers should possess patience in teaching. This precious virtue consists of allowing all the children of a class sufficient time for them to seek and mentally formulate the answer to a given question. * * *

The Government has powerfully aided to ingraft in the minds of the children of the people the ideas of reflection and forethought by establishing in the schools temperance societies, savings banks, and societies for the protection of animals, trees, plantations, and public monuments. These societies are concrete institutions, destined to fix the ideas of forethought and will. The Government encourages every one of these, but it attaches the greatest importance to the fight against alcoholism, that great destroyer of free will in man and the principal cause of the miseries of the greater number. It finds in the teaching staff zealous and convinced apostles, and statistics here published show a constantly increasing prosperity in each of these societies.

The progress of popular education during the last twenty-five years is due to the intelligent activity and the spirited initiative of the ministers of public instruction, selected by the King from among the most eminent men of learning. Unfortunately these ministers are subject to the vicissitudes of politics, and it sometimes happens that they have to resign their places before they have expended the fullness of their talent. Happily for the country, our ministers of public instruction have had the benefit of the uninterrupted services of two eminent educators, M. Germain, general director of primary education from 1879 to 1897, and M. Emond, who has held the same high portfolio since that period. The work so thoroughly carried out and completed is due to the labors of these two men, so distinguished by their varied and profound knowledge. * * *

BRAZIL.

BY DR. DA MOTTA, OF THE BRAZILIAN COMMISSION.

ORGANIZATION.

Brazil has its system of education organized in all the territory of the Republic, including the Federal district and twenty States. Elementary and secondary education are supported and controlled by the authorities of the Federal

Digitized by Google

district and of each State in their respective territories. The higher education is under the control of the Federal Government, though there are some scientific and technical schools belonging either to private associations or to States. Some municipalities have elementary schools, and many others belong to religious orders; private institutions conducted by individuals are found everywhere.

Instruction is given in the following classes of establishments: Kindergartens, elementary schools, model schools, evening schools, normal schools, manual training schools, gymnasiums, lyceums, medical schools, polytechnic schools, military schools, naval schools, mining schools, fine art schools, pharmacy schools, music institutes, schools for the blind, schools for deaf-mutes, agronomical stations, agricultural schools, and professional schools. There are also public libraries, museums, and astronomical observatories. Both the Government and the people make great efforts to develop instruction more and more.

Normal schools prepare teachers for the primary schools. Model schools have the same course of study as the primary schools, but they serve as practice schools for the subprofession before being appointed teachers.

The amount of money to be used for the support of the primary and secondary public schools in the Federal district and in each State is fixed by law.

Municipal schools are supported by public funds of the several municipalities. Some schools and lyceums belonging to private institutions receive financial aid either from the Federal Government or the State governments. The Federal Government supports the following schools and establishments: School of Medicine of Rio de Janeiro, School of Medicine of Bahia, Polytechnic School of Rio de Janeiro, military schools of Rio de Janeiro, Law School of Sao Paulo, Law School of Recife, Mining School of Ouro Preto, Pharmacy School of Ouro Preto, Naval School of Rio de Janeiro, Fine Arts School of Rio de Janeiro, Musical Institute of Rio de Janeiro, National Gymnasiums of Rio de Janeiro, Fine Arts School of Bahia, School for the Deaf-mutes of Rio de Janeiro, Benjamin Constant Institute (School for the Blind), of Rio de Janeiro, National Museum of Rio de Janeiro, and Astronomical Observatory of Rio de Janeiro.

The courses of study of the primary, secondary, and higher educational institutions are determined by Federal law for the last one, and by the States and Federal district for the first two. Generally schools begin in February or March and continue until November or December. Teachers of schools belonging either to the Federal district or States are appointed by their respective governments. In the Federal district and in some States, in order to be appointed a teacher in primary schools, it is necessary that, besides the normal school certificate, an additional certificate be received by the candidate from a special board appointed for that purpose by the Federal or State government, as the case may be.

Generally children are admitted to primary schools from 6 to 14 years of age. The Federal district and each State are divided into school districts, whose primary public schools are under the care and supervision of inspectors, who are subject to the direction and control of the general director of instruction in the case of the Federal district, but of the secretaries of the interior in the various States; normal schools and public gymnasiums or lyceums are under immediate control of the last-named official in the States, and of the second in the Federal district.

Superior public instruction is under the control of the Federal secretary of the interior.

Digitized by Google

THE BRAZILIAN EXHIBIT.

In the Brazilian educational exhibit all the States of the Republic were not represented, nor all typical schools; neither did all that were represented make a complete exhibition of their course of study, so that it could not give a perfect idea of the Brazilian system of education. Nevertheless, it showed that in Brazil public instruction receives great care from the Federal and State governments.

The following exhibits were made:

Photographs of school buildings, schoolrooms, school laboratories, museums, etc.

School legislation and organization.

Written work of school children, pupils of primary, secondary, and intermediate schools; herbarium prepared by children.

School apparatus, appliances, and furniture, some of which was designed and made by school children, or by pupils of technical (or trade) schools.

Drawings made by children and pupils of scientific, technical, and trade schools.

Manual-training work, kindergarten and sewing work by children.

Typewriting and stenographic exercises made by girls of business schools.

Photographs of gymnastic, playground, and kindergarten exercises.

Artificial flowers of wax, feathers, scales, and cloth, made by girls of the institutes and schools.

School appliances and specimens of sewing made by Indian children.

Fine gold, silk, and linen embroideries made by girls from industrial schools, institutes, and orphan asylums.

Fine specimens of joinery, xylography, lithography, typography, clothing, and shoes made by pupils of industrial schools, institutes, and lyceums.

Charts, maps, etc.

Chemical preparations made by pupils of the school of pharmacy.

Architectural models, motors, pumps, mills, and iron, bronze, and brass foundry work, made by pupils of engineering and technical schools and institutes.

Text-books, monographs, theses, and original contributions from professors and students.

Scientific investigations, studies, reviews, and publications made by museums, scientific schools, and historical and geographical institutions, and a great number of printed books, etc., pertaining to education.

Only Rio de Janeiro, Sao Paulo, Bahia, Matto Grosso, Para, Amazonas, Santa Catharina, Parana, Minas-Geraes, and Rio Grande do Sul contributed to the exhibits.

CUBA.

BY EDUARDO MORALES DE LOS RIOS, COMMISSIONER.

ORGANIZATION.

A system of public education such as exists now in our country and has existed for many years in the United States was unknown in Cuba under the Spanish Government, although we have had several great and well-known Cuban educators, such as D. José de la Luz y Caballero, Dr. Félix Varela, and others, who did all in their power toward the establishment of a good school system.

Digitized by Google

Education was compulsory, but the number of public schools was not large, and education was free only to children whose parents were entirely unable to pay the small tuition charged. Many parents who could not pay objected to making known their poverty by applying for the free admission of their children to school and preferred to have them stay at home. Another circumstance that reduced the attendance was the fact that our schools were found only in cities and towns. No rural schools existed, and therefore only children living within the boundaries of cities and towns received the advantages of education. Most of our rural population was illiterate. The number of public schools was a little over 300 in all the country, and school attendance was given at about 28,000 to 30,000. The methods were old and the books were of the poorest kind.

Some institutions, such as "La Sociedad Económica de Amigos del País de la Habana," and some men, such as Señor Hoyo y Junco, Señor R. de la Cuesta, and others, founded and endowed free schools. Their methods and equipment were undoubtedly better than those used in the public schools, but these schools also were established in cities and towns and offered no advantage to the rural population.

The principal subjects taught in our public schools were fancy sewing, religion, reading, writing, arithmetic, and geography of Spain; all other features of education were greatly neglected, and even some of these received but small attention. This state of affairs continued until the latter part of the year 1899, or some ten months after the island had come under American control.

The first step in the reorganization of our school system was taken in the month of November, 1899, when Mr. Alexis E. Frye was appointed superintendent of schools. One month later, December 6, he issued the first school law (Military Order 226, series 1899). Previous to this several attempts had been made in the cities of Habana, Santiago, Cienfuegos, and others toward improving their schools, but the results of these attempts were only local. The people of Cuba were so anxious to have a good school system that the results of the publication of the first school law were astonishing. In less than four months nearly 3,000 public schools were in actual working order and about 120,000 children had registered.

Some of these schools were located in huts, and boards placed on stones were used for benches. All were short of supplies, and in some these were limited to a blackboard and a few writing pads. Nevertheless the work in these schools continued under these hard circumstances until better houses were either rented or built and equipped with the best school furniture and supplies obtainable.

According to the law, public school teachers draw their salaries for twelve months in the year; but unless they attend some authorized summer school they are not entitled to their salaries during the vacation period. This provision of the law caused some anxiety the first year on account of difficulties found in organizing good summer schools, and Mr. Frye's idea of bringing a large body of teachers to study in Harvard University summer school obtained the approval of the secretary of public instruction and of the military governor of Cuba, as well as of Dr. Charles W. Eliot, president of the university.

The whole plan was arranged between Doctor Eliot and Mr. Frye, and by the 5th of July, 1899, all the persons who took part in the excursion had landed safely in Boston. The total number was 1,278; of these 1,175 were public school teachers, and the rest—103—were professors of the Habana University, teachers of secondary education and of private schools, chaperons, interpreters, physicians, and priests.

At the invitation of President Eliot, another group of 79 teachers attended the Harvard summer school the next year.

During the first excursion a new school law was published by the department

Digitized by Google

of education (Military Order 368, series 1900), and this law, slightly modified, is the one by which our schools are still governed.

One great difficulty found in the organization of our school system was the lack of teachers, and this was overcome by giving the boards of education entire liberty to appoint any man or woman who, in the judgment of said boards, was able to teach. These teachers were required later to pass annual examinations in all the subjects comprised in our course of study. In these examinations teachers obtain certificates of the first, second, or third grade, according to the number of points they get. A recent law published by the department of education allows each teacher 5 points for each year of practice in the public schools.

The certificate of the first grade requires an annual examination, and if at the end of three years the teacher should not be able to obtain a higher certificate, his or her career as a teacher comes to an end. The certificates of the second and third grades require an examination every two and three years, respectively, and do not limit the work of the teacher to any number of years, so long as he or she complies with the school laws concerning examination of teachers.

The Republic of Cuba is divided into six provinces. Each of these has a provincial superintendent of schools, who has charge of all the city and rural schools and is the representative of the secretary of public instruction and of the general superintendent of schools. The six provincial superintendents, presided over by the general superintendent, constitute the board of superintendents. This board recommends text-books, organizes teachers' examinations and summer schools, and prepares courses of study. There are also six school inspectors, who have the supervision of schools in municipal or rural school districts, the supervision of schools in the city districts being in charge of the city superintendents. There is a uniform course of study for the teaching of all subjects.

English is taught where the number of schools is sufficient to justify the employment of a special teacher. For the teaching of other special studies, teachers must obtain previously the consent of the provincial superintendent.

Since Cuba became a Republic her department of education has continued in the path opened by the United States Government in the island, and the number of public schools and kindergartens has increased. At the close of the course of 1901–2 there were five kindergartens, all of which were taught by foreign teachers; at present we have one kindergarten normal school, from which about twenty teachers have graduated and are now teaching in as many kindergartens. At the same time we have kept the foreign teachers we had, one of whom has been appointed general supervisor of kindergartens and another principal of the normal school.

The Cuban Government has continued to build rural schoolhouses and to supply the schools with the best material and text-books obtainable. All school expenses are paid out of the customs revenue. The latest data at hand show the following statistics for last May:

School expenses	$468,234.95
Number of children registered	139,148
Average daily attendance	101,885
Number of teachers employed	3,524

There is an official bulletin issued twice a month, and distributed free to every teacher, in which are found articles written by prominent Cubans, and translations or reprints from foreign school papers. It also publishes school statistics and all circulars and orders issued by the school authorities.

THE CUBAN SCHOOL EXHIBIT.

When the department of education decided to be represented at the Louisiana Purchase Exposition, the secretary of public instruction, Dr. Leopoldo Cancio, appointed the following committee of seven to attend to all matters connected with the exhibits: Chairman, Dr. Manuel Valdés Rodríguez; members, Mrs. Rosalía Urbach de Nuño, Mrs. María E. Keil de Greit, Dr. Miguel Garmendia, Dr. Lincoln de Zayas, Dr. Sixto López Miranda; secretary, Mr. Eduardo Morales de los Ríos. This committee issued circulars inviting public and private teachers to contribute to the exhibit, and giving them instructions, and applied to the exposition company for 1,500 square feet of space in the palace of education.

Shortly afterwards the committee was informed that Cuba was assigned 680 square feet of space, and consequently the committee proceeded to prepare an exhibit small enough not to crowd the limited space obtained.

Toward the beginning of March two of the members of the committee, Dr. Sixto López Miranda and myself, were appointed commissioners of education to the exposition, and I was sent to St. Louis to prepare the space for the display of the educational exhibit. During my short stay in St. Louis I succeeded in having our space changed, and we finally were assigned about 1,100 square feet. This change, a little over a month before the opening of the fair, caused new changes in the preparation of our exhibit, and even having this larger space, we were unable to present what would certainly have been the most interesting feature of the Cuban educational exhibit. This was a complete set of furniture and text-books of a public school in the year 1899, and another set showing a public school in the present year. The lack of space limited this exhibit only to the set of text-books.

Cuba, in her educational exhibit, is represented in Groups I, II, III, IV, VI, and VIII—that is, in six of the eight groups in which education is classified. On entering our exhibit, to the left is found the work of our kindergarten normal school and of the different kindergarten schools of the island. Just back of this exhibit is that of our elementary schools, arranged by provinces. These two exhibits cover about four-fifths of the total space.

Immediately following the elementary schools are the private schools and correctional and training schools for boys and girls; and last of all, toward the right, are the institutions of secondary education, the academy of science, and the national university. Exactly fronting the entrance is the exhibit of the School of Arts and Trades of Habana.

The limited space assigned to me for this description of our school system and our exhibit necessarily causes this work to appear in some cases unfinished, and also to leave untold many important items.

GERMANY.

THE EXHIBIT.

[From the Official Guide.]

The object of the German educational exhibition is to give a clear idea of the forms, equipment, organization, and results of the whole German educational system by means of a selection of typical exhibits suitable for the purpose. The exhibition consists of five great departments, of which detailed accounts

Digitized by Google

are given in five separate catalogues. The first of these departments comprises the German universities and other scientific institutions, and contains the writings of the academies of sciences, exhibits sent from the German excavations now proceeding in Germany and in foreign lands; plans, photographs, and models of the universities and technical colleges; and, finally, botany and zoology. The second department is devoted to chemistry, the third to scientific instruments, the fourth to exhibits illustrating the system of instruction and apparatus used in teaching in certain selected departments of medicine, and the fifth to elementary and advanced education. The whole exhibit covers an area of about 50,000 square feet.

OFFICE.

The head office of the general commissioner, Graf zu Limburg-Stirum, is just inside the main south entrance of the Education Building on the right of the staircase leading to the gallery.

I.—*Universities and scientific institutions.*

Opposite the main entrance we come into the court of honor, in which is exhibited a bust of the Emperor William II, modeled by Professor Manzel, of Berlin. In repositories on the walls are collections of

WRITINGS OF THE GERMAN ACADEMIES OF SCIENCES.

These come from the Berlin, Göttingen, Leipzig, and Munich academies. The work Das Unterrichtswesen im Deutschen Reich, edited by Geh. Reg.-Rat Professor Lexis, of Göttingen, with the cooperation of numerous specialists and published in connection with the educational exhibit, is laid out on tables in the foreground, the German edition in four volumes, the abridged English edition in one volume with the title "A General View of the History and Organization of Public Education in the German Empire."

Through one of the two exits near the bust of the Emperor we enter the room set apart for the

EXCAVATIONS.

The most important is the Saalburg exhibit. The Roman citadel Saalburg was part of a system of fortifications which the Romans, after they had subjected the Rhine and Danube countries, set up against the Germanic tribes. The Saalburg was one of the larger frontier citadels and guarded the most important pass in the eastern Taunus Range. The numerous interesting discoveries which were made in the ruins of this citadel and the adjoining part of the frontier wall, the Limes, led Emperor William II to issue a command for its reerection after the plans of Geh. Baurat Prof. Jacobi, of Homburg. The Pretorium and the greater part of the outer wall with three gates have already been completed.

The exhibit, which has been put together by Landbau-Inspektor Jacobi, comprises models of the citadel, of the Pretorium and the reconstructed Porta sinistra, of a Roman heating apparatus, of a Pfahlgraben tower and a draw well, with ground plans of the citadel and models of arms and tools, which last scarcely differ from their modern counterparts. There are also rich ornaments in bronze and silver, toilet articles, surgical instruments, writing materials, lighting apparatus, and 21 different types of shoes.

The excavations at Baalbek, the ancient Heliopolis, which were begun in 1901 under the direction of Otto Puchstein, are concerned with two temples of Jupiter

Digitized by Google

Heliopolitanus, built in the reign of the Antonines. Ten large photographs, with various drawings, give some idea of these wonderful remains of late Roman architecture.

The excavations being carried on amid the ruins of Babylon since March, 1899, at the instance of the German Orient Association, in cooperation with the general administration of the royal museums, are represented by copies of five Babylonian flagstone pictures, the copies having been made by W. Andrae (Dresden) from the originals. The excavations on the burial field of Abusir in Egypt are represented by a ground plan and a water-color painting of the whole field of the pyramids. The excavations at Miletus and Priene, which have been proceeding since 1899 under Dr. Th. Wiegand's direction, are represented by 12 photographs of Miletus and by a plan of Priene.

A collection of large photographs of architectural monuments from west Germany, forming a valuable aid in art instruction in German universities, has been added to the excavation exhibit.

UNIVERSITIES.

The two exits from the Saalburg exhibition lead into the room of the universities, whose contents chiefly consist of plans and views. In the middle of the room we see the statue of Athena Lemnia imitated in antique bronze, as restored by Furtwängler and Aldenhoven and cast by A. Gerber, of Cologne. Then come other busts, among them one of Mommsen, modeled by Dr. Walther Lobach, of Charlottenburg, and, further, busts of Gutenberg, Goethe, Luther, Kant, the brothers Von Humboldt, etc. A number of tables contain portfolios with drawings of apparatus and appliances used in the universities of Berlin, Bonn, Breslau, Göttingen, Halle, Kiel, Königsberg, Marburg, Würzburg, and Leipzig; the new buildings for the Charité Hospital are represented by a water-color painting, perspective pictures, and a revolving stand with 72 photographs; all these have been sent by the Berlin University. A Triptychon oil painting by Martini, of Berlin, represents the new botanical gardens near Dahlem. The main building of the University of Bonn is shown in a large photograph. The new medical buildings of the University of Breslau are represented in 16 large photographs from Kgl. Messbildanstalt, of Berlin; also those of Marburg in eight pictures. Moreover, there are photographs of Göttingen, Greifswald, Halle, Königsberg with the Palaestra Albertina, and Leipzig, and colored sketches of the Jansen wall paintings in the aula of the University of Marburg. There are, besides, other institutes related to the universities, which are represented by drawings and photos: The Royal Library, the Royal Academy of Sciences, and the University Library of Berlin, the new buildings of which are shown in plans as well as by an oil painting by Grete Waldau; the Royal Meteorological Observatory near Potsdam, 10 large photographs of other scientific institutes in Potsdam, new buildings of the Aeronautical Observatory near Lindenberg, and the boathouse of the Academic Rowing Club, Berlin.

TECHNICAL COLLEGES.

The adjoining room contains the exhibit of the technical colleges, consisting of maps, models, pictures, and printed matter, arranged according to the direction of Professor Kammerer, of Charlottenburg. "Der Dämon des Dampfes" (The Demon of Steam), a statue by Professor Reusch, of Königsberg, has been set up as an appropriate symbol; a model of the Technical College in Charlottenburg-Berlin, a model of the ocean liner *Kaiser Wilhelm II*, and a model of a sliding platform or stage worked by electricity, a machine demonstrating the

Digitized by Google

cogwheel theory, and numerous photographs give an idea of the work of the Berliner Technische Hochschule; the Aachen Institute sends graphic statistical tables; the Technische Hochschule in Danzig, which has just been completed, is represented by a large water color by E. Palm, and the Dresdener Hochschule by a model and ground plans of the new buildings for the mechanical department erected in 1898–1904. There are also exhibited a Druckschrift der Kgl. Sächsischen Bergakademie zu Freiberg i. S., a collection of photographs and plans, and Druckschriften der Städtischen Handelshochschule zu Köln a. Rh. Busts of Gauss, Helmholtz, and Siemens, by A. Gerber, Cologne, are among the articles exhibited.

BOTANY.

The biology rooms are situated opposite the halls containing the exhibit of the universities and technical colleges and near the outer wall of the main building.

The botanical exhibit has been prepared by the Royal Botanical Garden and Museum in Berlin according to the directions of Geh. Reg.-Rat Engler. It gives a general idea, firstly, of the scientific activity of the officials of these two institutes by means of writings on the most important branches of their work; secondly, of the new grounds of the botanical gardens and museum in Dahlem and of the vegetable products of the German colonies. The works exhibited are partly writings on general systematic botany, partly magazines edited by officials of the botanical museum, special systematic works treating of special families, and, finally, general and special botanical geographical works of individual countries and works on special branches of botany.

The exhibit of products of the German colonies consists of only a small selection of those which can be more easily transported and which are of such a nature as to excite special interest. Thus food plants, aromatic plants, spice, oil and fat plants, color, caoutchouc, tan stuff, and fibrous plants, timbers, and various characteristic plants, with views of vegetation growths and illustrations of special plants from Togo, Kamerun, German Southeast and Southwest Africa, and from the German South Sea possessions are exhibited.

ZOOLOGY.

In the zoological department are exhibited the means and methods employed by the German biological museums in their endeavors to impart to students in particular, but also to more general circles, an understanding of the forms, construction, and phenomena of living organisms. Only those objects have been exhibited which are especially instructive by reason of the method of their mounting, preservation, preparation, or explanation.

The exhibit, which was prepared by Professor Plate, of Berlin, and put up by Professor Ehrenbaum, of Heligoland, consists of the following subgroups: 1. Preparations for use in connection with a scientific system of zoology. 2. Anatomical preparations and models. 3. Preparations and models for use in embryology and the history of development. 4. Pathological and biological preparations. 5. Biological groups and pictures.

II.—*Chemistry.*

Entering at the southeast main entrance to the electricity building, one sees on the right two entrances to the chemistry exhibit. First the visitor enters a reading room, which contains in two cases a collection of the German chemical literature of ancient and modern times, a collection of about 3,000 dissertations,

Digitized by Google

and chemical newspapers upon the tables. The busts of several German chemists, Wöhler, Eilhard Mitscherlich, Heinrich Rose, A. W. von Hofmann, and August Kekulé, have been placed on top of the cases. The bust of Justus von Liebig is on view in the Liebig laboratory, on the right.

On the left of the entrance is the alchemistic laboratory, which, under a dark, Gothic vaulted roof, contains the mysterious laboratory of the old adepts of the fifteenth to the seventeenth century. The apparatus exhibited are partly originals, partly copies of old specimens from the Germanic museum in Nuremberg.

The Liebig laboratory leads off from the opposite side of the reading room, and is a faithful copy of Liebig's laboratory for analytical instruction at Giessen. Among the apparatus exhibited, which fills us with amazement by reason of its primitive construction, we must specially call attention to a model of the so-called Liebig cooler, still used for distillation purposes, and to the Liebig combustion furnace using coal for fuel, which was of great importance in the introduction of elementary analysis. Collections of preparations by Liebig and by his pupils and contemporaries are exhibited in four cases. About 3,700 preparations are exhibited in the departments for modern chemistry, the majority of which are wholly German inventions.

We pass through the entrance near the alchemistic laboratory into the hall for general and inorganic chemistry, and first of all come to a collection of apparatus for gas analysis. In this room there is also an inorganic double worktable, a specimen of those used in the first chemical university laboratory in Berlin; apparatus for qualitative and quantitative work and for volumetric analysis is exhibited on this table, and a double digestorium has been set up. In the other glass cases apparatus for the determination of molecular weights is exhibited; in the cases are preparations in connection with scientific and technical inorganic chemistry, inorganic pigments, other scientific and technical inorganic preparations, and a dark room for experiments with radio-telluric rays and fluorescent phenomena.

The door on the left of the narrow end of the hall leads into the room for analytic scales and balances; the door on the right into the pyro-chemistry exhibit containing electric and other modern furnaces for smelting and welding.

Adjoining this room is the hall for electro-chemistry, which contains various apparatus in six glass cases, besides an electro-chemical laboratory after Nernst in Göttingen; in four other cases are preparations acquired by electro-chemical methods, apparatus for quantitative analysis by electrolysis, and a modern ozone apparatus for constant current.

The large group of organic chemistry, the Dye laboratory, physiologic chemistry, and chemistry of fermentation occupy the opposite side of the exhibition room.

In the hall for organic chemistry we find on the wall toward the Liebig laboratory first of all apparatus for organic elementary analysis exhibited in 6 glass cases. To these belongs an organic worktable for four experimentists, on which apparatus for preparatory organic work is exhibited. Adjoining these is a double digestorium, a worktable with leaden covering for larger operations, especially for distillations under diminished pressure, and a series of glass cases with dry cases and preparations. A large collection of more than 2,500 organic, scientific, and technical preparations, which have been supplied by savants and members of the chemical manufacturing industry, is here exhibited in 15 cases.

The dye laboratory exhibited (Dr. Lange, Krefeld) is intended to give an idea of the appliances in use in educational establishments, dye factories, dye works, and printing establishments, for the qualitative testing and quantitative analysis of dye chemicals and ingredients, for determining the worth of dyestuffs and

Digitized by Google

mordants, for the discovery of new dyestuffs, for testing the fastness of colors, etc.

The shaking apparatus and the appliances for bomb-tube experiments occupy a separate compartment; in the same room autoclaves, blast furnaces, shaking blast furnaces, large vacuum distillation appliances, etc., are exhibited.

The last hall is given up to the exhibit of physiological chemistry and chemistry of fermentation. This exhibit comprises medicines, a large variety of different kinds of sera, scientific preparations from the saccharine group, from the chemistry of albumens and yeasts, and from several technical preparations related to them. It also includes a large variety of apparatus used for purposes connected with physiological chemistry and the chemistry of fermentation, and a table for microscope work after Doctor Lindner. Above the middle case, which contains the saccharine preparations, hangs the picture of the master of organic synthesis, Geh. Reg. Rat Prof. Dr. E. Fischer, Berlin.

The chemistry exhibit was prepared by Prof. Dr. C. Harries in Berlin; Doctor Zwingenberger is acting as official representative.

III.—*Scientific instruments.*

The exhibit of scientific instruments is arranged in four halls and one vestibule.

In the vestibule several cases with demonstrating apparatus for instruction in higher educational establishments are exhibited, sent by the firms Hartmann & Braun, Kohl, Leppin & Masche.

Through a door on the right the visitor enters the hall devoted to optics. In this hall photometric apparatus has been exhibited by the firms Schmidt & Haensch, of Berlin, and Krüss, of Hamburg; optical glasses by the Jenaer Glaswerk Schott u. Gen., prisms, and the new glasses transparent to ultra-violet light. An optical bench, constructed by Toepfer & Son according to the directions of Professor Hartmann, serves for the convenient investigation of objectives. The Zeiss'sche Werkstätte in Jena exhibits instruments for optical measurements, and stereoscopical instruments of the newest construction; prism and relief telescopes, with very pronounced stereoscopic power, and a stereoscopic distance-measuring apparatus. By means of the interference spectroscope, constructed by Schmidt & Haensch after Lummer & Gehrcke, the finest details of spectral lines may be analyzed; polarization apparatus, in which the Lippich half-prism polarization is used, are exhibited by Peters as well as by Schmidt & Haensch. In the department of microscopy numerous instruments for the most varied purposes are exhibited by the firms Brunnée, Fuess, Leitz, Toepfer, and Zeiss, with preparations, among which is Moeller's unique collection of diatomaceæ. The apparatus for rendering visible ultra-microscopic particles, designed by Siedentopf and Zsigmondy and constructed by Zeiss, deserves special interest. Spectral apparatus (among them a precision spectrometer by Wanschaff), instruments for optical measurement, preparations of limespar, are exhibited by various firms; Hauswaldt, of Magdeburg, exhibits his beautiful photographs and his atlas of the interference figures of crystals in polarized light. Some of the "black bodies" used for the investigation of radiation are also exhibited, as well as a spectro-photometer constructed by Schmidt & Haensch after Lummer and Brodhun, together with a rotary dissector and some smaller projection apparatus by Schmidt & Haensch.

The adjoining hall contains the instruments for astronomy and geodesy, scales, and balances, and apparatus for length measurement. Toepfer & Sohn have exhibited a wedge photometer for the observation of the brighter stars, which has been mounted in the manner of an equatorial coudé, according to the

Digitized by Google

suggestion of Müller & Kempf. The same establishment shows a microphotometer, according to Hartmann, for the measurement of the surface luminosity of very small light-emitting surfaces, which has also been found useful in the investigation of the sensitiveness of photographic plates. In the field of astrometry a meridian circle is exhibited by Bamberg and a transit instrument by the same maker, furnished, as is the meridian circle, with a Repsold registering micrometer for diminishing the error of the personal equation of the observer. A collection of instruments for accurate astro-geodetic measurements is exhibited by the firms Bamberg, Tesdorpf, and Wanschaff, and a numerous selection of geodetic instruments by Rosenberg and Tesdorpf. Among these belongs the zenith camera after Schnauder, which makes use of photography for the determination of time and longitude, and which enables accurate results to be obtained by travelers even when unskilled observers.

A new system of measurement which is made use of in the Pulfrich stereocomparator, made by Zeiss, promises to be of great importance, especially for geodesy and astronomy. In this the stereoscopic observation and measurement method is used to determine the distribution in space of distant objects, to measure their size or to compare their differences.

Of the geophysical instruments exhibited, attention is due to the v. Sterneck pendulum apparatus, improved by Helmert, with invariable pendulums for the relative determination of gravity, which is exhibited by Fechner, its maker. Of newer seismologic apparatus, the Ehlert horizontal pendulum, constructed by Bosch, of Strasburg, has been exhibited, as well as a model of the same after Hecker. The Wiechert astatic pendulum seismometer, a new instrument of extraordinary sensitiveness, has been exhibited by Bartels, of Göttingen; the earth movements registered are magnified two hundred times.

Of nautical instruments, two pieces of apparatus have been exhibited, both of new construction; the deep-sea tidal gauge, by Mensing, and the compass-reading transmission, by Siemens & Halske.

Balances have been exhibited by several firms—Bekel, Brunnée, Bunge, Hasemann, Schopper, Spoerhase, Stückrath, and others; the most interesting instrument among these is the standard balance for weights up to 20 kilograms (Stadthagen), exhibited by the Kaiserliche Normal-Eichungskommission, of Charlottenburg.

An apparatus for the determination of thickness, a cathetometer by Heele, a dividing engine by Sommer & Runge, and the model of a Riefler standard clock with nickel-steel pendulum are also shown. Several collections of drawing instruments should be mentioned, instruments for accurate measurement in shopwork by Bieling and Hommel, a calculating machine by Burkhardt, with photographs of the older calculating machines of Leibniz and Hahn from the seventeenth and eighteenth centuries.

The exhibit of electrical apparatus comprises the equipment of physical and electro-technical laboratories with electric-measuring instruments, purely technical apparatus being excluded. The apparatus for measurement is grouped in several glass cases.

Of the instruments for direct-current measurement, attention was called to the manganine standard resistances constructed chiefly by O. Wolff, invented by Feussner and Lindeck, to the models of the Feussner compensations apparatus, in which the Weston cadmium element is used, and to the instruments of the Deprez-d'Arsonval type for the direct reading of currents, voltage, etc., exhibited by Siemens & Halske and Hartmann & Braun.

The more delicate laboratory apparatus is exhibited in cases and vitrines, while the instruments of technical importance are arranged on two switch

Digitized by Google

boards. The mirror instruments, partly ready for use, are arranged on two wall brackets. Among those deserving special attention is the galvanometer, protected against disturbances from neighboring heavy currents.

Siemens & Halske and Hartman & Braun have constructed apparatus for the direct measurement of alternating currents, based on the dynamometric principle. With these apparatus the highest voltages may be measured without danger, transformers and excellent porcelain insulators being employed. To these belong also the Ferraris rotating field instruments, exhibited by Siemens & Halske.

The fourth hall contains thermometric and meteorologic instruments, as well as scientific glass apparatus. The liquid thermometers, filled with pentane (Rothe) for measuring very low temperatures, were worked out in the Reichsanstalt and are exhibited by Burger, Richter, and Siebert & Kühn. Of the mercury thermometers, a large number of which are exhibited by Fuess, Götze, Greiner, Niehls, and Schultze, attention is called to the so-called "high-reading thermometers" (up to about +570° C.), in which the mercury column is under high pressure, and further to the quartz thermometers (up to about 750° C.), exhibited by Siebert & Kühn.

Scientific glass apparatus, such as areometers, chemical graduates, etc., which have been brought to perfection specially through the work of the Normal Eichungs-Kommission, are exhibited by Greiner & Schultze. Various vacuum tubes are also exhibited (Roentgen tubes, etc.) and vacuum vessels for storing liquid air, by Burger, Gundelach, and Müller-Uri.

Special smaller groups consist of the apparatus for calorimetry, by the firms Peters and Junkers & Co.; the apparatus for the measurement of high pressures, by Stückrath, Schäffer & Budenberg; an apparatus for testing indicators (Dreyer, Rosenkranz & Droop), and, lastly, a photographic registering furnace gas analyzer, by Schultze.

Of the meteorological apparatus, mention is made of those now used in Germany in scientific aeronautics, e. g., kites, Assman rubber balloons, kite balloons, and the instruments used in connection with them for registering meteorological phenomena.

The newer apparatus for the study of atmospheric electricity, on the basis of Elster & Geitel's researches, is employed in an aspiration apparatus for measuring the electrical conductivity of the atmosphere, designed by Ebert and constructed by Günther.

Of the terrestrial magnetic instruments exhibited we mention the registering variometers designed by Eschenhagen and constructed by Toepfer, a standard magnetic theodolite of the Magnetisches Observatorium, Potsdam, exhibited by Bamberg, an inclinatorium by Tesdorpf, and a small variometer designed by Ebert for magnetic orientation during balloon ascents.

Among the latest meteorological apparatus the Sprung photogrammetric "Wolkenautomat," and a registering constant volume air thermometer after Sprung, are shown in photographs.

The walls of the hall for scientific instruments are decorated with large photographs of the Kgl. Messbildanstalt, the Potsdam scientific institutes on the Telegraph hill, a large water color of the Physikalisch-Technische Reichsanstalt, illustrations of apparatus and interiors, etc. A revolving stand with 64 photographs of various institutes in Berlin, Potsdam, and Göttingen completes the picture presented of the present state of fine mechanics and optics in Germany, as regards the aims and interests of science and education.

The exhibit has been arranged according to the directions of Professor Doctor Lindeck, Charlottenburg; Doctor Krüss, of Hamburg, is acting as official representative.

IV.—*Medicine.*

The medical exhibit has been placed in the rooms adjoining the inner wall of the main building, opposite the halls assigned to the universities and technical colleges. Its main object is to show the system of medical instruction followed in the German universities and the apparatus made use of by the teacher in instructing. With this aim in view, articles from all the main departments of medical science have been exhibited. The exhibit was prepared according to the directions of Geh. Med.-Rat Prof. Dr. Waldeyer, with the cooperation of Professor Kutner, both of Berlin, and arranged by Doctor Kaiserling, of Berlin, with the assistance of Preparator Seifert. Of the numerous departments of medical science, five were chosen, namely, bacteriology, anatomy, surgery, pathological anatomy, and internal medicine, to which, as a special exhibit, a Roentgen cabinet, furnished with all the newest apparatus, has been added.

1. The department for bacteriology and experimental therapeutics, including the combating of epidemics, demonstrates the progress which has been made in this department since the world exhibition at Chicago. Among the most noteworthy of these advances are the serum therapeutics established by Behring, the modern rational prophylaxis of epidemics due to Koch's labors, and the combating of tropical diseases, especially malaria. Moreover, a number of important human and animal germs have been discovered, such as the bacilli of influenza, bubonic plague, dysentery, etc.

In order to show the manner in which the results of research are demonstrated to the student, each infectious disease has been treated separately, in accordance with the system in force in the bacteriological courses of instruction. The following diseases and their organisms are represented: Tuberculosis, cholera, bubonic plague, leprosy, smallpox, typhus maculosus, abdominal typhus, dysentery, malaria, syphilis, tetanus, meat poisoning, anthrax, streptococci, staphylococci, pneumococci, meningococci, gonococci, actinomycosis, influenza, sleeping disease, diphtheria, swine erysipelas, swine epidemic and swine plague, rabies, glanders, bacteriology of eye diseases, and various parasites. As far as possible the micro-organism of the infection is shown first in the form of pure cultures and in micro-photographic enlargements; the injurious effect produced by the corresponding micro-organism is then shown, partly by means of pathological preparations and partly by illustrations. The diagnosis of bacteria is elucidated partly by the demonstration of their specific forms of growth and special chemical changes and partly by the method of agglutination. Further on the preventive measures and the specific methods of treating epidemics are also demonstrated, and it is shown how, by legislative regulations, pamphlets, and popular instruction, efforts are being made to propagate hygienic knowledge among the masses. The part the water supply plays in cholera, the part played by rats in bubonic plague, by mosquitoes in malaria, etc., is here demonstrated. Further it is shown how the bacteriological expert now takes the place of the military cordon and land quarantines, which delay trade and traffic. He, equipped with his portable laboratory, fights the pestilence in the very spot where it breaks out. Numerous maps and diagrams show the influence of the new methods upon the decrease in disease and mortality. In the special department for immunity and serum therapeutics the visitor learns to recognize the more intimate qualities of the blood serum of immunized men and animals, as well as the antitoxic and bactericidic sera and the agglutinant stuffs, whose operation is demonstrated in a great number of experiments, while Ehrlich's receptor theory (Seitenkettentheorie) is explained by means of wall maps. Further, the state supervision of sera, as carried out at the Insti-

Digitized by Google

tute for Experimental Therapeutics, in Frankfort-on-the-Main, is represented. Adjoining this exhibit is a collection of specimens of all the prophylactic and remedial sera produced in Germany, of the bacterial preparations for purposes of vaccination, and a model bacteriological laboratory furnished and arranged by the firm of Lautenschläger, Berlin.

The bacteriological exhibit was arranged by the Kgl. Preussisches Unterrichtsministerium, Professor Wassermann, with the cooperation of the Kaiserliches Gesundheitsamt, Berlin.

2. The anatomical exhibit, prepared by Geh. Med. Rat Professor Doctor Waldeyer, Berlin, falls into two parts. The object of the first is to illustrate, by means of methodically arranged and coordinated preparations, the course of exercises in preparing and dissecting as pursued in the German anatomical institutes. For this purpose the following preparations have been exhibited:

(*a*) An arm to illustrate a muscle, ligament, and bone preparation; (*b*) a heart with pericardium to illustrate an intestine preparation; (*c*) a brain; (*d*) an eye; (*e*) an ear—the last three to illustrate the dissection of the central nervous system and the organs of sense; (*f*) a foot with injected arteries to illustrate the preparation of the peripheral blood vessels and nerves.

In the second department are exhibited a variety of teaching apparatus in models, illustrations of all kinds, books, instruments, etc., as well as appliances in use in various institutes; also various demonstrating apparatus which appear specially adapted to purposes of instruction.

3. The surgical department consists of two separate exhibits, organized by the Kgl. Chirurgische Klinik Berlin (Wirkl. Geh. Rat, Prof. Dr. E. von Bergmann) and the Kgl. chirurgische Klinik Breslau (Geh. Med. Rat, Prof. Dr. J. von Mikulicz-Radecki), respectively.

The first department comprises the newest projection methods, photographs, plastic reproduction methods (Moulagen), photographs, and stereoscopes, and the microscopic preparations and diapositives of photographs with Roentgen rays which are intended for projection purposes. Where possible, a photograph of the diseased part of the body has been represented, then the Roentgen photograph of this, the method of operation, the preparation obtained through the operation, microscopic sections through the same, and the results of the operation itself. A new device is that of a plastic representation by means of models (Moulagen) of the separate stages of an operation. An illuminating apparatus shows series of the Roentgen pictures with remarkable clearness; of these the injection preparations of the bones are worthy of special mention, likewise an eye mirror after Thorner, a mirror apparatus by G. Meyer, and a cystoscope after Kutner, which enables the students at the same time as the instructor to inspect the background of the eye or the interior of the larynx or bladder.

The second department of the surgical exhibit deals mainly with the employment of Roentgen photography and of models (Moulagen) taken from the living body, which are best adapted to initiate students into the details of the differential diagnosis of related diseases, and also enable the various stages in the course of one and the same case of disease to be demonstrated. The knee joint was chosen as an example and has been exhibited in eleven different diseases.

The technique of the methods of operation on the stomach and intestines practiced in the Breslau surgical clinic is illustrated by five large models (Moulagen); there is a most exhaustive list of exhibits from the Breslauer Klinik representing the present-day technique of the diagnosis and therapeutics of esophagus diseases; Doctor Kümmell of Eppendorf Hamburg, shows what

Digitized by Google

surgery has accomplished in regard to the diagnosis and therapeutics of kidney diseases. Of more general interest is the collection of apparatus for the generation of artificial hyperæmia by Bier of Bonn; the diagnostics of skin diseases is represented by a series of models from Neisser's Klinik in Breslau. Wall maps with schematic pictures are exhibited by Garré (Königsberg), Helferich (Kiel), and Trendelenburg (Leipzig). Georg Haertel has exhibited a case of surgical instruments.

4. Pathological anatomy. In this department, prepared by Geh. Med. Rat Prof. Dr. Orth with the cooperation of Doctor Kaiserling, Berlin, a number of aids to instruction in special branches are exhibited, namely, in ophthalmology, rhinolaryngology, and dermatology, in order to show how, even in these branches, instruction is imparted on a morphological basis; this is owing chiefly to the labors of Rudolf Virchow. Of the articles exhibited the following deserve special attention: Representation of the method of dissection in the Berlin Pathological Institute, illustration of the system of the microscopical courses for students, methods employed in the demonstration course of pathological anatomy, flashlight photograph of a theoretical lecture in the lecture hall of the new pathological museum in Berlin, preparations from the collection of that institute, and photographs.

Maps, stereoscopic photographs, and preparations for the epidiascope have been exhibited by the pathological institutes of Breslau, Kiel, and Munich. From the Berlin clinics and hospitals preparations and representations of diseases of the throat, nose, eye, skin, stomach, bones, etc., have been exhibited, as well as chromoplastic models (Doctor Berliner, Berlin) of preparations from all departments of pathology.

5. The department for internal medicine, arranged by Geh. Med. Rat Prof. Dr. Kraus, Berlin, endeavors to show by one selected example—tuberculosis—the principles according to which clinical lectures on internal diseases are given. To attain this object the groups—pathology of tuberculosis, bacteriological diagnostics, diagnosis through the medium of the laboratory, clinical diagnosis, special therapeutics, general therapeutics, and prophylaxis of tuberculosis—are represented.

6. The exhibit of radiography and of Roentgen apparatus, prepared by Doctor Bockenheimer, Berlin, has been placed in a special Roentgen cabinet. In it we see, first, several collections of Roentgen photographs taken for research purposes with the Roentgen rays by the Kgl. Preussisches Institut, Berlin (director, Professor Doctor Grunmach), and by Doctor Albers-Schönberg, of Hamburg. The latter photographs were taken with the aid of the compression diaphragm, a contrivance which represents a great improvement in the method of Roentgen-ray photography. Siemens & Halske, Berlin, exhibit a completely equipped modern Roentgen cabinet, consisting of Roentgen tubes, spark inductors, various interrupters and auxiliary apparatus—such as fluorescent diaphragms—diaphragm apparatus, the above-mentioned compression diaphragm of Doctor Albers-Schönberg, a heart-measuring apparatus, switch board and switch table and measuring instruments, as well as mirror and prism stereoscopes after Doctor Walter, constructed by Krüss, Hamburg.

Siemens & Halske also exhibit apparatus for cautery, endoscopy, galvanization, electrolysis, faradization, and finally iron arc lamps for light therapeutics.

7. A collection of selected medical teaching apparatus is exhibited in a small hall opposite the Roentgen cabinet. Here special mention is made of the projection apparatus with appliances for micro-photography, a number of microscopes from the firm Carl Zeiss, Jena, preparations from various institutes and

Digitized by Google

laboratories, the first remedies physiologically tested in the Pharmakologisches Institut der Universität, Berlin (Prof. Dr. O. Liebreich), plans and designs of clinics, diapositives of photographs of the eye, demonstrating apparatus of the movements of the velum palatinum in speaking (Doctor Gutzmann, Berlin), and a number of models (Moulagen) in plaster of Paris and wax by Kolbow, Berlin. Among other exhibits are a case of surgical instruments and electro-medical apparatus by L. and H. Loewenstein, Berlin, cinematographic projection apparatus by Messter, Berlin, and models of eye diseases by F. Ad. Müller Söhne, of Wiesbaden.

LECTURE HALL.

The lecture hall, erected at the expense of the Imperial Government, is situated in the middle of the German educational exhibit in the Educational Building. Its object is to represent a small-sized auditorium furnished with all the more important appliances for instruction and experiments, such as is in general use in scientific institutes in Germany. This hall is, however, also intended to serve the special purpose of a hall for lectures, demonstrations, and experiments from all departments of the German exhibition.

It contains modern auditorium fittings by Max Kohl, Chemnitz; contrivances for darkening the hall; an experiment table; a blackboard frame; a projection screen, with electromotor appliances; a switch board, and a water air pump with bellows. The projection apparatus for natural color photography of Professor Miethe, Berlin, with series of pictures, and a large epidiascopic apparatus by C. Zeiss, Jena, have also been set up for demonstration purposes.

V.—*Elementary and advanced education.*

The outer wall of the room devoted to elementary and advanced education is decorated on the right and left with reliefs by Stadtbaurat Hoffmann, which represent groups of German schoolboys and schoolgirls, while the inner walls are adorned with colored lithographs, with photogravures from the Gesellschaft zur Verbreitung klassischer Kunst, with photographs showing German pupils during drawing instruction, and, finally, with models of the old masters. In this room hang two school boards for drawing instruction, on which one can work with charcoal, chalk, and water colors. Johannes Müller (Berlin SW.) has exhibited in this room a so-called "zeichenblock," with comfortable seat, movable drawing board, and model stand. The firm of Günther Wagner has exhibited boxes of water colors and indelible drawing inks. The artistic animal models of the Albrecht-Dürerhaus were produced in Sanders Präparatorium.

In the drawing exhibit prepared by Professor Doctor Pallat, Berlin, are six large desks along the back and side walls, and on these are 12 folios of drawings by scholars, which represent the course of instruction in the various kinds of schools. Inside these desks are 34 portfolios with drawings by scholars of various institutions. In each portfolio is the work of three or more scholars of different degrees of proficiency, done in the last semester, or in the last school year.

Further on in the same direction, on the outer wall of the exhibit, which is decorated with "putti" and German eagles, we see further specimens of artistic wall decoration and illustrations of Stuttgart and Munich school buildings. The main entrance to the school exhibit is a faithful copy of an existing German school portal (work of Stadtbaurat Hoffmann, Berlin). In the middle of the first room the statue of a female figure by the Berlin sculptor, Professor

Digitized by Google

Manzel, has been set up as a symbol of education. The pedestal, which is surrounded with flowers, is decorated with carved festoons, after sketches by Stadtbaurat Hoffman. A small side room to the left is occupied by the Munich school exhibit. Here are shown the wood model of a Munich primary school, photographs of city public school buildings in two revolving stands, ground plans and photographs of school buildings in the capital of Bavaria, a plan of the distribution of the schoolhouses and scholars' playgrounds in Munich, and illustrations of the primary and continuation school system in that town. On the right hangs a large picture of the Städtische Kunstgewerbe und Handwerkschule zu Charlottenburg, and beneath it an interesting wood model is exhibited, which represents a combination of the gymnasium (ground floor), with the public library and reading room (in the upper story), with the adjoining rooms for bookbinding, giving out books, etc. Around the walls hang ground plans, sketches, plans, and photographs of school buildings in Breslau and Darmstadt; pictures representing school life in Leipzig, Chemnitz, etc. At the instance of the Breslau municipality graphic representations and printed matter on the revival of educational life in Breslau have been exhibited on a special table.

Upon tables to the right and left lie specimens of the boys' hand work from schools in Saxony, Strassburg, and Hildesheim, and teaching apparatus used in instruction in hand work for girls (especially in Strassburg schools), and, finally, the literature regarding instruction in hand work, manual dexterity, instruction in trades and mechanics, drawing and writing copies, and normal courses of instruction, especially the hand-work courses, illustrated with models, by Max Ruess, of Ulm. On the walls hang plans, drawings, graphic representations, and photographs illustrating the work of the town councils at Dresden, Leipzig, Hildesheim, Strassburg, Elberfeld, Barmen, and Düsseldorf in the interest of public instruction and general education.

Photographs along both walls represent the work in the Berlin hand-work schools and municipal technical school. Above and below them hang statistical tables showing the development of the Berlin system of continuation, people's, and technical training schools.

In the next room on the right, containing a bust of Herbart, more pictures and statistical tables are exhibited; pictures of new school buildings in Berlin, and more school work from Berlin, Hanover, and Leipzig, shown in portfolios and albums. The most important German works on pedagogy recently published have been exhibited, and are arranged around the bust of Herbart. In a small separate room in the middle of the whole department is the special exhibit of the Kreuznach Realschule, consisting of pictures, statistical tables, plans, photographs, printed matter, and school-exercise books, which give an insight into the work and organization of this institution, besides showing its exterior and interior arrangement. Similar exhibits from those schools which represent the various kinds of higher instruction for boys are on view in the next three rooms on the right. In one room the peculiar character of the Evangelical Pedagogium, at Godesberg, is represented. The scholars of this establishment are brought up in the homes of the teachers in the various villas lying around the main building. On the small revolving stand are views of daily life in the Godesberg institution; on the larger revolving stand are photographs, statistical diagrams and summaries, and time-tables of the second Berlin Realschule. The time-table of these six-class, non-Latin Berlin schools varies, as is well known, from the time-table prescribed by the state. They were founded by the former Stadtschulrat Bertram (Berlin), a portrait of whom adorns the

Digitized by Google

back wall of this room. Finally, the Bochum Ober-Realschule and some German schools in foreign lands have also exhibited in this room. The time-tables of these last vary little from those of the Realschule. Two or three pictures here exhibited illustrate work in the teachers' seminaries for training candidates for positions as teachers in higher schools. In the next room is the exhibition from schools with the realgymnasium time-table; to these belong also the cadet schools. The realgymnasium at Elberfeld shows the normal, that at Barmen the reform time-table. In the last compartment on the right are all the objects exhibited by the grammar schools at Wongrowitz and Posen, by the great boarding schools, Joachimsthal Gymnasium and Pforta, and by the two Frankfurt reform schools, the Goethe Gymnasium and the "Model School" ("Musterschule").

If we now cross to the opposite room, past the bust of Homer, we come to the exhibit of the Königliche Blindenanstalt, at Steglitz, near Berlin, and the separate exhibit of Director Kunz, of Illzach i. E., consisting of the teaching apparatus used in instructing the blind, a number of pieces of work by blind pupils of both sexes, some of their games, the school building and home for the blind at Steglitz, and a large number of photographs illustrative of the daily work of the indigent blind in such institutions. In a large room opposite the exhibit of the realgymnasium at Barmen are the exhibits of the institutions for the education of deaf-mutes at Frankfurt a. M. and Munich, of the auxiliary schools at Leipzig, Kassel, and Stolp i. P., and of the municipal idiot asylum (Berlin-Dalldorf). Teaching apparatus and specimens of the work of the pupils show how and with what results work is carried on in the schools for the weak-minded. Education Inspector Piper, of Dalldorf, shows in a collection of interesting plaster casts abnormalities in the formation of the jaw in weak-minded children.

The next room contains the exhibits of the village school at Datum-Nienhöfen, in Schleswig-Holstein; of the Royal Teachers' Seminary at Ziegenhals of the two hundred and thirteenth Berlin elementary school for girls, the two hundred and thirty-second Berlin elementary school for boys, of the Arndt intermediate school (for boys), and of the first intermediate school for girls at Stettin. With all the exhibits there is a selection of schoolbooks, school exercise-books, girls' hand work, and printed matter giving information on the management of and results attained in the different institutions.

The following room contains the exhibits of the Königin Augusta School (high school for girls) and the Seminary for Women Teachers connected with it, of the Sophien School, Hanover, a high school for girls, with courses in classics for the older girls, and of the Royal Seminary for Women Teachers at Burgsteinfurt i. W. The firm of F. L. Wachsmuth, of Leipsic, has exhibited several pictures for object-lesson instruction in this room.

The department in which special teaching apparatus is exhibited is worthy of attention. The first compartment of this section contains maps, atlases, reliefs, globes, telluria, planetaria, pictures for object-lesson instruction, and text-books for geographical instruction.

In the next room the maps, pictures, and books for German religious instruction are exhibited, as well as music manuscript and books for singing instruction. A special teaching model (Gusinde's "singing machine") is also used in singing instruction. On the middle table is an exhibt of Fröbel's instructive occupations for the kindergarten (exhibited by S. F. Fischer, Oberseiffenbach, Erzgebirge).

The object-lesson pictures, maps, and books of the adjoining room are mainly

Digitized by Google

for instruction in the classical languages and in history, while the next room contains further object-lesson pictures from various German publishing firms, teaching apparatus by Ebbecke in Lissa i. P., calculating machines, models of school furniture, model of a German schoolroom, and finally, the exhibit of Doctor Krantz's Rheinisches Mineralien Contor in Bonn. The Winckelmann Lehrmittelanstalt, Berlin, and the Kagerah'sche Verlag technologischer Lehrmittel, Hamburg, have also exhibited here. Schroeder's technico-chemical wall maps from Th. Fischer & Co.'s Verlag have been hung in the corridor on the right.

In the middle of the next room, in three glass cases, are exhibited the physical apparatus of a Berlin elementary school a collection of blossom models by the firm of Brendel (Grunewald), the zoological models by the firm of A. Boettcher, and other physical apparatus by Gebhard Söhne and by Ephraim Greiner. The rest of the space is filled up with text-books and object-lesson pictures for instruction in natural science, botany, and zoology. The next compartment is chiefly devoted to teaching apparatus for zoology and anatomy (especially as regards a thorough understanding of the human body), while the middle table is covered with preparations and collections by Haferlandt, Pippow, Professor Landois, and others.

The nature of the exhibit in the next room is at once indicated by a bust of Jahn, the "Father of Gymnastics," and a model of the Guts Muths monument in Quedlinburg, by Professor Anders. On the walls hang plans and pictures of the public playgrounds and grounds for gymnastics, photographs representing German school children at games and sport, in the gymnastic grounds, in the gymnastic hall, on excursions, rowing, and swimming. In the middle of the room are a large model by A. Buczilowsky of a gymnastic hall, and a relief by Stadtbaurat Hoffmann, representing bears at gymnastics. The technical literature on gymnastic instruction, school sport, games, and school hygiene is here exhibited. In a corridor we see models of gymnastic apparatus, a model of a boat by Lürssen, maps from best cartographic establishments, a further selection of schoolbooks and literature for the young, and a large collection of statistical diagrams from the Königlich Statistisches Bureau, Berlin, including tables and summaries containing material important in compiling school statistics and in studying the German system of elementary, intermediate, and advanced education.

As we leave the room containing the German school exhibition we see on the outer walls, on the one hand school maps of the German Empire and its capital, on which are marked all the high schools, high schools for girls, agricultural schools, cadet schools, and training seminaries for male and for female teachers, and on the other hand a large collection of Teubner pictures for the artistic decoration of the walls of the school and home. In this collection two expressive portraits of Goethe and Schiller have not been forgotten.

STATISTICS.

The following 24 brief tables were prepared by the commissioners intrusted with the education exhibit of Germany at the Louisiana Purchase Exposition at St. Louis. They are here reproduced because they show concisely the characteristic features of German school organization. Comparison with American statistics has been facilitated by converting income and expenditure from German to United States money, and by substituting in some cases technical terms better understood here for those given in the original.

A.—THE GERMAN EMPIRE.

TABLE I.—*Public elementary schools (the so-called Volksschulen) in 1891–92 and 1901–2.*

	1891-92.	1901-2.
1. Public elementary schools	56,563	59,364
2. Teachers in full employment	120,032	146,584
3. Pupils at public elementary schools	7,925,688	8,921,440
4. Total expenditure for public elementary schools	$57,690,962	$99,450,724
5. State appropriation for public elementary schools	$16,495,780	$28,644,966
6. There were—		
(a) Inhabitants per 1 public elementary school	874	950
(b) Pupils at public elementary schools per 1,000 inhabitants	160.3	158.3
(c) Pupils at public elementary schools per teacher	66	61
(d) Total expenditure per pupil at public elementary schools	$5.28	$11.15
(e) State appropriation per pupil at public elementary schools	$2.08	$3.21
(f) Total expenditure per public elementary school	$1,019.83	$1,675.52
(g) State appropriation per public elementary school	$291.55	$482.43
7. Private schools with the same ends as the public elementary schools		666
8. Pupils at the private schools (No. 7)		39,939

The teachers in Germany have passed the prescribed examinations, are permanently engaged, or have the reversionary right to permanent engagement, are entitled to pensions, and can, for the most part, be dismissed only by a judge's sentence.

The expenditure in items 4 and 5 is a minimum. The costs of general school management, of school inspection, and of teachers' training are not included. The State subsidy in item 5 forms part and parcel of the total expenditure in item 4.

TABLE II.—*Decrease in illiteracy among army and navy recruits from 1875–76 to 1901–2.*

Of 1,000 recruits—volunteers for one year's service not included—the following were without all school education:

	In the Empire.	In Prussia.[a]		In the Empire.	In Prussia.[a]
1875-76	23.7	31.9	1893-94	2.4	3.7
1880-81	15.9	23.3	1894-95	2.2	3.2
1885-86	10.8	16.8	1895-96	1.5	2.2
1886-87	7.2	11.2	1896-97	1.1	1.6
1887-88	7.1	10.4	1897-98	.8	1.1
1888-89	6.0	9.4	1898-99	.7	.9
1889-90	5.1	7.8	1899-1900	.8	1.2
1890-91	5.4	8.2	1900-1901	.7	1.0

3. To one student at the training colleges there were inhabitants:

1870	4,930
1892	2,764
1902	2,830

4. To one student at the training colleges there were teachers at the public elementary schools:

1870	10.4
1892	6.6
1902	7.4

5. Cost per student per annum:

1870	$76.40
1892	130.85
1902	185.40

TABLE VII.—*Compulsory school attendance in Prussia in 1871, 1891, and 1901.*

	1871.	1891.	1901.
Children (of 6 to 14 years old) bound to attend school	4,464,906	5,299,810	6,108,745
Of these:			
1. Attended public elementary schools	3,900,655	4,916,476	5,670,870
Per cent	87.36	92.77	92.91
2. Attended other schools	222,211	288,244	349,017
Per cent	4.98	5.44	5.72
3. Temporarily excused from school attendance	312,219	83,604	72,638
Per cent	6.99	1.58	1.19
4. On account of bodily defects not sent to school	9,038	10,041	10,672
Per cent	0.20	0.19	0.17
5. Illegally kept away from school	20,783	945	548
Per cent	0.47	0.02	0.01

TABLE VIII.—*Public elementary schools in Prussia in 1871, 1891, and 1901.*

1. Public elementary schools:	
1871	33,130
1891	34,742
1901	36,756
2. School classes:	
1871	52,747
1891	82,746
1901	104,082
3. Pupils:	
1871	3,900,655
1891	4,916,476
1901	5,670,870
4. Teachers in full employment:	
1871 (48,211 male and 3,848 female teachers)	52,059
1891 (63,237 male and 8,494 female teachers)	71,731
1901 (76,342 male and 13,866 female teachers)	90,208
5. Assistant teachers for special branches (needlework, gymnastics, drawing, etc.), 1901:	
Male teachers	131
Female teachers	33,062

TABLE IX.—*Total expenditure for public elementary schools of Prussia in 1871, 1891, and 1901.*

1. Cost of maintenance of public elementary schools:

1871	$13,244,319.00
1891	34,801,624.00
1901	64,240,346.00

2. The above costs were covered:

		Per cent.
(*a*) At the State expense—		
1871	$689,054.00	= 5.20
1891	11,066,008.00	=31.79
1901	17,389,742.00	=27.07
(*b*) By tuition fees—		
1871	2,498,713.00	=18.87
1891	328,198.00	= .94
1901	196,670.00	= .31

(*c*) The remainder by the communities and other parties bound by law to contribute (1901, 67.07 per cent), and from the income arising from irreducible funds (1901, 5.55 per cent).

3. A pupil at the public elementary schools cost:

1871	$3.40
1891	7.08
1901	11.33

4. A public elementary school and a school class cost, respectively:

1871	$399.36 and	$251.09
1891	1,001.74 and	420.55
1901	1,747.63 and	617.13

5. For every thousand inhabitants the expenses of public elementary school maintenance amounted:

In 1871 to	$538.36
In 1891 to	1,161.68
In 1901 to	1,863.54

TABLE X.—*Salaries of teachers in the public elementary schools of Prussia in 1886, 1891, 1896, and 1901.*

1. AVERAGE TOTAL INCOME.[a]

Year.	Male teachers—		Female teachers—	
	In towns.	In the country.	In towns.	In the country.
1886	$399.13	$269.65	$289.41	$225.15
1891	431.26	300.83	300.12	243.76
1896	482.90	322.97	323.16	269.42
1901	571.44	402.93	380.56	314.40

2. TEACHERS' SALARIES.

Salary.	Male teachers (per 1,000)—			
	In towns.		In the country.	
	1896.	1901.	1896.	1901.
Up to $215	25.9	2.5	116.8	85.7
$215 to $285	123.0	41.8	310.6	211.0
$285 to $428	308.4	221.2	434.4	342.6
$428 to $571	280.3	315.8	111.8	244.0
$571 to $714	171.1	217.6	23.6	92.3
Above $714	91.3	201.1	2.8	24.4

[a] To the sums mentioned should be added from 15 to 20 per cent for rent, for the teachers live either in dwellings connected with the schoolhouse or receive a sum varying between 15 and 20 per cent of their salaries as indemnity for rent.—EDITOR.

TABLE X.—*Salaries of teachers in the public elementary schools of Prussia in 1886, 1891, 1896, and 1901*—Continued.

2. TEACHERS' SALARIES—Continued.

Salary.	Female teachers (per 1,000)—			
	In towns—		In the country.	
	1896.	1901.	1896.	1901.
Up to $166	15.6		12.4	
$166 to $215	90.6	34.2	165.8	127.0
$215 to $285	301.8	194.5	498.4	353.6
$285 to $428	475.6	513.8	309.1	443.7
$428 to $571	113.3	202.2	14.3	72.6
$571 to $714	3.1	55.3		3.1

TABLE XI.—*Public intermediate boys' schools* [a] *in Prussia in 1891 and 1901 (with intermediate schools for both sexes).*

	1891.	1901.
1. Schools	252	319
2. Pupils	57,633	86,965
3. Teachers fully employed:		
Male teachers	1,563	2,368
Female teachers	92	209
Together	1,655	2,577
4. Expenses of maintenance	$906,384.00	$1,977,659.00
5. The expenses of maintenance were defrayed:		
(a) By the State	$14,591.00	$24,215.00
Per cent	1.60	1.23
(b) By tuition fees	$432,698.00	$801,817.00
Per cent	47.21	40.54
(c) The rest by the communities and by others bound by law to contribute (1901, 57.61 per cent), by income from school property, etc. (1901, 0.62 per cent).		
6. Average salary:		
Male teacher	$485.00	$647.31
Female teacher	$269.18	$348.43
7. Average cost of maintaining a school	$3,628.55	$6,199.43
8. Average cost of maintaining a school class	$565.34	$797.54
9. Average cost per pupil	$16.95	$22.85

[a] The schools are advanced elementary city schools, not classed among secondary schools, though they teach mathematics and one foreign language. Pupils leave when 16 years old to enter upon practical pursuits. The technical term of such schools in German is "Mittelschulen."—EDITOR.

TABLE XII.—*Public intermediate girls' schools* [a] *in Prussia in 1891 and 1901 (without the schools for both sexes, see XI).*

	1891.	1901.
1. Schools	92	137
2. Pupils	28,702	47,776
3. Teachers fully employed:		
Male teachers	461	702
Female teachers	356	704
Together	817	1,406
4. Expenses of maintenance	$411,863.00	$1,001,320.00
5. The expenses of maintenance were defrayed:		
(a) By the state	$4,926.27	$4,175.23
Per cent	1.08	0.42
(b) By tuition fees	$217,871.21	$435,355.79
Per cent	47.99	43.48
(c) The rest by the communities and by others bound to contribute (1901, 56.05 per cent), by income from school property, etc. (1901, 0.05 per cent).		
6. Average salary:		
Male teacher	$562.63	$728.42
Female teacher	$299.17	$395.32
7. Average cost of maintaining a school	$4,376.78	$7,308.93
8. Average cost of maintaining a class	$557.40	$781.78
9. Average cost per pupil	$14.28	$20.94

TABLE XIII.—*Course of instruction and foreign languages in the public intermediate schools of Prussia in 1901.*[a]

1. Total number of the public intermediate schools, 456.
2. The complete course of instruction in intermediate schools occupies:

Period.	In boys' schools.	In girls' schools.	In schools for both sexes.
6 years	2		
7 years	5	3	
8 years	149	113	82
9 years	55	21	9
10 years	6		1

3. Foreign languages are taught in these schools—

(*a*) As obligatory subjects:

Language.	In boys' schools.	In girls' schools.	In schools for both sexes.
French	183	103	84
English	67	29	48
Other languages	76	1	17

(*b*) As optional subjects:

Language.	In boys' schools.	In girls' schools.	In schools for both sexes.
French	3	3	4
English	38	39	28
Other languages	38		43

[a] See footnote to Table XI.

TABLE XIV.—*Public high schools for girls of Prussia in 1891 and 1901.*

	1891.	1901.
1. Schools	206	213
2. Pupils	44,935	53,480
3. Teachers fully employed:		
Male teachers	973	1,059
Female teachers	866	1,264
Together	1,839	2,323
4. Expenses of maintenance	$1,192,349.00	$1,994,410.00
5. The expenses of maintenance were defrayed:		
(*a*) By the State	$29,214.74	$49,111.29
Per cent	2.22	2.61
(*b*) By tuition fees from the parents	$671,025.00	$1,188,741.00
Per cent	50.90	59.66
(*c*) The rest by the communities and by others bound to contribute, 1901, 37 per cent, by income from school property, etc., 1901, 0.73 per cent.		
6. Average salary:		
Male teachers	$879.27	$948.67
Female teachers	$341.05	$432.21
7. Average cost of maintaining a school	$3,788.16	$9,363.40
8. Average cost of maintaining a class	$735.90	$1,026.97
9. Average cost per pupil	$26.42	$37.37

TABLE XV.—*Course of instruction and foreign languages in the public high schools for girls of Prussia in 1901.*

1. The entire duration of the course of instruction occupies—

	Schools.
8 years in	16
9 years in	120
10 years in	77

2. Foreign languages are taught as follows:

(*a*) French and English are obligatory in 192 schools, viz:

	French.	English.
In 2 school years		6
In 3 school years		102
In 4 school years	4	83
In 5 school years	9	1
In 6 school years	105	
In 7 school years	74	

(*b*) French alone obligatory in 1 school for seven years, in 1 school for five years.

(*c*) French obligatory and English optional in 19 schools, viz:

	French.	English.
In 2 school years		8
In 3 school years	1	9
In 4 school years	3	2
In 5 school years	4	
In 6 school years	10	
In 7 school years	1	

(*d*) One other foreign language: Obligatory in 2 schools for one and three years, respectively; optional in 5 schools for one, two, and seven years, respectively.

TABLE XVI.—*Private schools in Prussia pursuing the same ends as the public elementary and intermediate schools in 1901.*

1. Private schools pursuing the same ends as the public elementary schools:

Schools	315
Classes	497
Pupils	12,964
Teachers fully employed:	
Male teachers	256
Female teachers	202
Teachers not fully employed (technical not included):	
Male teachers	89
Female teachers	22

2. Private schools pursuing the same ends as the public intermediate schools:

(*a*) Schools—	
For boys	178
For girls	103
For both sexes	177

Digitized by Google

(*b*) Pupils—

Boys	9,929
Girls	8,191
Both sexes—	
Boys	3,569
Girls	3,622

(*c*) Teachers fully employed—

Male teachers	775
Female teachers	595
Teachers not fully employed (technical not included):	
Male teachers	598
Female teachers	51

(*d*) The entire duration of the course of instruction occupies—

	In schools for—		
	Boys.	Girls.	Both sexes.
5 years	11	.....	4
6 years	51	5	13
7 years	59	8	34
8 years	41	43	95
9 years	16	42	28
10 years	.....	5	3

(*e*) Foreign languages are taught as follows:

[Number of schools.]

Language.	Obligatory.			Optional.		
	Boys.	Girls.	Both sexes.	Boys.	Girls.	Both sexes.
French	142	93	188	14	10	38
English	30	55	76	22	32	48
Other languages	124	1	43	37	.....	72

TABLE XVII.—*Private high schools for girls in Prussia in 1901.*

1. Schools	649
2. Pupils	73,440
3. Teachers fully employed:	
Male teachers	216
Female teachers	3,972

4. The entire duration of the course of instruction occupies:	Schools.
6 years in	5
7 years in	7
8 years in	67
9 years in	395
10 years in	175

Digitized by Google

5. Foreign languages are taught as follows;

(*a*) French and English obligatory in 531 schools, viz:

	French.	English.
In 1 school year		2
In 2 school years		30
In 3 school years	3	268
In 4 school years	21	196
In 5 school years	40	20
In 6 school years	316	11
In 7 school years	149	4
In 8 school years	2	

(*b*) French alone obligatory in 22 schools, viz: Five in six, 5 in five, 9 in four, 2 in three, and 1 in two school years.

(*c*) French obligatory and English optional in 81 schools, viz:

	French.	English.
In 2 school years		18
In 3 school years	2	45
In 4 school years	14	14
In 5 school years	17	3
In 6 school years	41	1
In 7 school years	7	

(*d*) French and English optional in 15 schools, viz:

	French.	English.
In 2 school years		1
In 3 school years		8
In 4 school years	1	4
In 5 school years	4	2
In 6 school years	7	
In 7 school years	3	

(*e*) One other foreign language optional in 28 schools, viz: Two in five, 1 in four, 11 in two, and 14 in one school year.

TABLE XVIII.—*The entire system of lower and middle schools in Prussia in 1891 and 1901.*

(*a*) SCHOOLS AND SCHOLARS.

	Schools.		Pupils.	
	1891.	1901.	1891.	1901.
1. Public elementary schools	34,742	36,756	4,916,476	5,670,870
2. Public intermediate schools	344	456	86,335	134,741
3. Public high schools for girls	206	213	44,935	53,480
4. Private schools (elementary)	495	315	21,678	12,964
5. Private schools (intermediate)	1,134	458	80,868	25,311
6. Private high schools for girls		649		73,440
7. Training schools	176	210	19,422	22,252
8. Schools in blind asylums	15	16	635	775
9. Schools in deaf and dumb asylums	49	46	4,080	4,035
10. Schools in asylums for idiots	33	38	1,866	2,855
11. Schools in reformatories, etc	137	138	6,692	7,325
12. Schools in orphan asylums	69	80	5,017	5,736
Total	37,400	39,375	5,188,004	6,013,784

Digitized by Google

TABLE XVIII.—*The entire system of lower and middle schools in Prussia in 1891 and 1901*—Continued.

(*b*) TEACHERS.

	Male teachers.		Female teachers.	
	1891.	1901.	1891.	1901.
I. Teachers fully employed:				
1. In public elementary schools	63,237	76,342	8,494	13,898
2. In public intermediate schools	2,024	3,070	448	913
3. In public high schools for girls	973	1,059	886	1,264
4. In private schools (elementary)	424	255	283	202
5. In private schools (intermediate)	900	775	3,159	595
6. In private high schools for girls		216		3,972
7. In training schools				
8. In schools in blind asylums	57	59	19	20
9. In schools in deaf and dumb asylums	390	428	24	32
10. In schools in asylums for idiots	62	68	41	74
11. In schools in reformatories, etc	204	211	32	37
12. In schools in orphan asylums	106	126	50	44
Total	68,377	82,609	13,416	21,019
II. Teachers not fully employed		2,807		594
III. Assistant teachers for special branches (needlework, gymnastics, etc.)		1,104		34,260

TABLE XIX.—*Public high schools for boys in Prussia (schools with six and more classes or yearly grades) in 1871, 1890, and 1902–3.*

	1871.	1890.	1902–3.
1. Schools	412	549	653
2. Teachers	5,447	8,670	9,943
3. Students	101,772	139,801	174,467
4. Teachers in preparatory classes	401	609	679
5. Scholars in preparatory classes	16,373	20,728	25,764

TABLE XX.—*Distribution of students in the upper, middle, and lower classes at the public high schools for boys in 1903.*

	Number.	Per cent.
1. Gymnasiums[a] and progymnasiums:		
Upper classes[b] (Ia, Ib, IIa)	18,413	19.17
Middle classes (IIb, IIIa, IIIb)	35,693	37.15
Lower classes (IV, V, VI)	41,960	43.68
2. Realgymnasiums[c] and realprogymnasiums:		
Upper classes (Ia, Ib, IIa)	3,129	11.46
Middle classes (IIb, IIIa, IIIb)	10,278	37.64
Lower classes (IV, V, VI)	13,897	50.90
3. Ober-realschulen[d] and realschulen[d]:		
Upper classes (Ia, Ib, IIa)	2,026	4.29
Middle classes (IIb, IIIa, IIIb)	17,616	37.34
Lower classes (IV, V, VI)	27,537	58.37
Also pupils in preparatory schools	25,764	.....

[a] A "gymnasium" is a classical school where Latin and Greek are among the chief subjects taught.

[b] The grades in all boys' secondary schools in Germany are called prima (upper and lower), secunda (upper and lower), tertia (upper and lower), quarta, quinta, sexta, and the course begins after three years' elementary work either in public elementary schools or in preparatory classes of the high schools.—EDITOR.

[c] A "realgymnasium" excludes Greek (taking English instead), but retains Latin, and teaches more mathematics than the "gymnasium."

[d] The "ober-realschule" and "realschule" exclude both Latin and Greek, and pay more attention to the modern languages, mathematics, the exact sciences, and professional knowledge.

TABLE XXI.—*The professions chosen by the students who left the public high schools for boys with the certificate of maturity from 1868–1891 and 1891–1902.*

	1868 to 1890-91.		1891-92 to 1902-3.	
	Number.	Per cent.	Number.	Per cent.
1. Left school with certificate of maturity:				
(a) In all	83,680		63,890	
(b) From the gymnasiums[a]	71,226		53,101	
(c) From the realgymnasiums[a]	12,654		8,381	
(d) From the ober-realschulen[a]			2,348	
2. Of the above have embraced:				
(a) From all the high schools—				
A learned profession	62,236	74.20	41,582	65.08
A technical profession	4,865	5.80	7,852	12.29
Other professions	16,779	20.00	14,456	22.63
(b) From the gymnasiums—				
A learned profession	58,873	81.95	38,946	73.56
A technical profession	2,493	3.51	4,462	8.39
Other professions	10,355	14.54	9,753	18.35
(c) From the realgymnasiums—				
A learned profession	3,863	30.53	2,368	28.49
A technical profession	2,367	18.70	2,425	28.94
Other professions	6,424	50.77	3,568	42.57
(d) From the ober-realschulen—				
A learned profession			248	10.56
A technical profession			965	41.10
Other professions			1,135	48.34

[a] For explanations of the terms "gymnasium," "realgymnasium," and "ober-realschule," see footnotes of Table XX.

TABLE XXII.—*Total expenditure of the public high schools for boys of Prussia in 1871, 1892, and 1902.*

	1871.	1892.	1902.
1. Total expenditure	$1,769,444.75	$7,358,683.92	[a] $11,959,290.96
For teachers' salaries	1,314,161.00	6,124,612.00	10,134,195.00
2. Expense per scholar at the high schools	17.40	52.65	68.54
3. Expense per 1,000 inhabitants	71.66	245.63	346.93

[a] Of this, $2,978,922 from the State, $454,815 from school property, $4,624,177 from tuition fees, etc., $3,345,890 from local taxes; the rest from endowments and special funds.

TABLE XXIII.—*Attendance at Prussian universities, according to faculties, from 1868–69 to 1902–3.*

[Number of students in the different faculties.]

Winter half year.	Total.	Protestant theology.	Catholic theology.	Law.	Medicine.	Philosophy.
1868-69	7,697	1,144	599	1,352	1,644	2,958
1875-76	7,924	690	365	2,248	1,333	3,288

JAPAN.

[The following account is taken from a work entitled "Japan in the Beginning of the Twentieth Century," compiled by Haruki Yamawaki, secretary of the department of agriculture and commerce and Japanese commissioner for the Louisiana Purchase Exposition, and published by the imperial Japanese commission to the exposition. To supplement Mr. Yamawaki's account there have been incorporated in it certain particulars as to courses of study, etc., and a brief description of some of the exhibits, taken from an address by Mosuke Matsumura, secretary of the Japanese commission.

The population of Japan in 1899 was 44,260,604, of which 76 per cent was rural and 24 per cent urban—including towns of not less than 3,000 inhabitants. The population below 15 years of age was 14,366,923, or 33 per cent of the total population.

The population is divided into four social classes, viz, members of the imperial family and descendants of the various branches of the imperial house; the peers; the Shizoku, who are the samurai, or military families, of former days, but now deprived of their privileges; and commoners, of the same social standing with the Shizoku.

By the constitution of Japan of 1889, the Emperor remains the head of the Empire, and exercises the entire executive power, with the advice of a cabinet, which includes the right of declaring war, making peace, and concluding treaties. The legislature consists of two houses, a house of peers and a house of representatives, elected by the people. Projects of law originate either in the cabinet or in the legislature (diet), and become law when they obtain the approval of the Emperor and the consent of the diet.

The Japanese claim that the imperial house of Japan is of unbroken lineage from the remotest antiquity, the dynasty having remained unchanged, notwithstanding the various changes the nation has undergone during the two thousand years that have elapsed since the founding of the Empire.]

I.—INTRODUCTORY.

In the pre-restoration days.—Education in Japan dates from remote antiquity, and the national traits of faithfulness, filial piety, as well as valor, have received from education a powerful stimulus. Intercourse with China and Korea naturally left on our educational system a peculiar stamp of its own, and Japan owed very much to these two neighbors in respect to her science and art. Whatever may have been the moving force of our education in its early stages, there exist ample authentic evidences attesting how even in ancient times culture and learning attained a high degree of development. Then followed centuries of intellectual retrogression, occasioned by the incessant civil strifes of the "middle ages," to be succeeded by the revival and renaissance of the period of Tokugawa.[a] It ought to be remembered, however, that education, as it was known prior to the restoration, was extremely narrow in scope and limited in operation. In fact, it practically consisted in belles-lettres and what are called

[a] Tokugawa dynasty, 1603–1868.

Digitized by Google

humanity studies, the latter based on the Chinese and Japanese classics. It has been only since the restoration that education in its modern sense has first been planted on our soil and that the system has been subjected to a thorough change.

After the restoration.[a]—True to national tradition, the Government bestowed special attention on matters of education, and in the very first year of the era several institutions were either created or thoroughly reorganized. The year 1869 saw the establishment of an imperial university, while two years later educational affairs were intrusted to an independent department of state. Next year the educational system was drawn up and proclaimed, and the utmost efforts were made to promote the cause of general and higher education. Since then, in accordance with the requirements of the times, amendments of the system and improvement of the arrangement have been carried out frequently till we witness the very full provisions which are existing to-day. In describing the existing educational system, a brief survey of the administrative organizations bearing upon it should first be given.

Educational administration.—The department of education superintends the educational affairs of the country, besides maintaining institutions essential for the State. In a similar way each local office superintends the educational affairs in its own jurisdiction and maintains at its own expense the schools required in it, and this remark also applies to each district, municipal, or rural corporation. The institutions maintained by the department are called Government institutions, while those maintained by local, district, or corporation expenses are called public or communal schools. The latter are of two kinds—one of them established in conformity with the order of the Government, and the other established at the initiation of the public body concerned. Normal schools, middle schools, and higher girls' schools are schools which the provincial offices are obliged to maintain in their jurisdiction, the number to be one or more, according to circumstances. The schools which a municipal or rural corporation is under obligation to maintain are primary schools. All the other kinds of schools maintained by all these public bodies are maintained by such bodies of their own accord, and, of course, with the approval of the central Government.

Besides, there are schools established by private individuals on their own account, and these are called private schools.

Being under the direct control of the department of state, all matters relating to the establishment or abolition or reorganization of the Government institutions are solely determined by the department, while all matters relating to the establishment or discontinuation or reorganization of prefectural schools are carried out by the respective prefectural offices, with the approval of the minister of education, while the appointment or relief from office of directors and teachers is made by the prefectural governors concerned. It ought to be added that the directors of normal schools are civil officials of the higher civil service. Matters relating to schools maintained by districts and municipal or rural corporations are carried out, with the approval of the minister of education, when they relate to the establishment, abolition, or reorganization of higher girls' schools, middle schools, and technical schools. The prefectural governors concerned arrange on their own sole responsibility all those matters relating to schools of other descriptions. Similarly, matters relating to the establishment, abolition, or reorganization of private schools are dealt with by the prefectural governors as in the case of district or communal schools. * * *

II.—GENERAL EDUCATION.

A.—KINDERGARTENS.

The first kindergarten in Japan was established in Tokyo in 1876. The number has since been considerably increased, so that at present every province has one or more kindergartens. The necessity of an institution for the training of qualified kindergarten teachers having come to be felt, a teachers' course was newly opened in 1878 in the kindergarten affiliated to the Tokyo Women's Normal School. The example set in Tokyo has since been followed in many provinces.

According to the existing provisions the number of children to be taken into a kindergarten is limited to 100, which number may in special circumstances be increased to 150. Each teacher has to take charge of not more than 40 children. According to the inquiries instituted at the end of the fiscal year of 1901, there were 254 kindergartens throughout the country, including 1 Government establishment, 181 public establishments, and 72 private establishments. The number of teachers totaled 671, of whom 6 were in Government establishments, 496 in public institutions, and 169 in private establishments. The pupils numbered 23,671.

In the kindergartens children from 3 to 6 years of age are educated. The subjects of teaching include songs, gifts, and games. The kindergartens are conducted in accordance with the system of Froebel.

B.—PRIMARY SCHOOLS.

History.—Family schools and schools maintained by the local feudal fiefs were in olden days the seats of learning, the former being mostly for children of the plebeian class and the latter for those of the samurai. The schools maintained by the fiefs taught first of all Chinese classics, then penmanship and arithmetic, while the humbler schools taught penmanship, reading, and counting. The education in those days was, therefore, far from perfect, absolutely speaking, but such as it was it satisfied the requirements of the time, and, especially as it was supplemented by the influence of a rigid domestic education, it attained the principal end of education—that is, it formed character and it supplied culture.

Not a few primary schools based somewhat on the western model were established soon after the restoration—i. e., after 1868—but it was not till 1871 that schools of this grade based on an entirely new system began to make their appearance. In that year the department of education brought under its direct control the six primary schools in Tokyo, and at the same time it distributed throughout the country the rules put in force in those six schools. In the following year the school system was elaborated and the whole country was divided into 53,760 primary school sections, each with one primary school. This elaboration of the system marks the new era in our education, for it was followed by the creation for the first time of communal and public primary schools.

The system underwent amendments and revisions on many occasions, the last change taking place in 1900. That change was caused by the existing primary school law. At the same time rules for putting it in operation were promulgated.

Kinds of schools.—Primary schools are divided into ordinary primary schools and higher primary schools. The two may either exist separately or in combination, in which latter case the schools are called ordinary and higher primary schools.

Digitized by Google

Teachers must have a regular license, which is of two kinds, one being good for all the country and the other good for only one particular locality. The latter, called a "prefectural license," is granted by the local authorities to those who have graduated from the prefectural normal school or other schools approved of by the minister of education, or those who have passed the prescribed license examination. The other license, called "national license," is granted to those teachers of distinguished service who have been in the service for more than ten years; also those who, after having graduated from a higher normal school, have served not less than three years as regular licensed teachers in a city or rural primary school. This license is also granted to those who have graduated from a special course of study at a school approved by the minister of education, provided they have been on the teaching staff of a primary school for not less than three years. * * *

In case a teacher dies while on active service or after he has retired, a sum of money corresponding to three times the salary he had drawn the month preceding his death is given to his family. A special allowance over and above that sum may be granted in the case of a schoolmaster or teacher who has rendered distinguished service. A schoolmaster or teacher who has sustained injury or contracted disease in the discharge of his duty is allowed his medical expenses. In general, according to local circumstances, houses may be provided or house rent granted to schoolmasters or teachers. * * *

The outlay involved in the special allowances described above is to be disbursed by the national treasury in accordance with the law relating to State aid to primary school teachers. * * *

C.—Blind and Deaf-and-Dumb Schools, Normal Schools, etc.

1. *Blind and deaf-and-dumb schools.*—It was in 1878 that a blind and deaf-and-dumb school was first established in Japan. It was established at Kyoto by private individuals. It ought to be added, however, that even before the restoration there were provisions for teaching the art of acupuncture and shampooing to the blind, who were thus provided with a means of earning a livelihood. The teaching, however, was simple, and hardly deserved the name of education as the term is understood to-day. The first blind and deaf-and-dumb school mentioned above was subsequently converted into a municipal institution, and, owing to the grant of money and building made to it by the imperial court, it has been considerably expanded in scope. The school is now known by the name of the Kyoto Municipal Blind and Deaf-and-Dumb School.

Following the worthy example set by the people of Kyoto, the citizens of Tokyo also established in 1880 a similar institution of their own, which was transferred to the management of the department of education. Under the new management the school has very much enlarged its scope, and it is now a model institution of its kind.

The Tokyo Blind and Deaf-and-Dumb School is divided into two departments, ordinary and technical. The blind students in the ordinary course are taught reading, arithmetic, and oratory, and those in the technical course music, acupuncture, and shampooing. The deaf and dumb students in the ordinary course are taught reading, penmanship, composition, arithmetic, also written conversation and gymnastics. In the technical course they are taught drawing and painting, sculpture, cabinet work, and sewing. In general every student is made to take the ordinary course and one or more subjects in the technical course; but, according to the request of parents, this arrangement may be somewhat modified. The term of study lasts three years for blind

Digitized by Google

visions similar to those for middle schools apply in the case of communal schools, or schools established and maintained by private individuals.

The study period in the middle school extends over five years, and that in the girls' higher school over four or five years. The age of the entrants must be over twelve years, and the requirement for admission is a completed two-year course in a higher elementary school.

The course of study in the middle school comprises morals, Japanese, Chinese literature, foreign languages, mathematics, history, geography, physics, chemistry, natural sciences, drawing, songs, and gymnastics, the gymnastics including military drill. The course given in the girls' higher school includes morals, Japanese, foreign languages, mathematics, history, geography, natural sciences, domestic science, sewing, drawing, music, and gymnastics. Education, Chinese literature, and handiwork may sometimes be added to this. A special art course is also included in the girls' higher school.

III.—HIGHER EDUCATION.

1. *The imperial universities.*—The imperial universities, one in Tokyo and the other in Kyoto, are maintained by the state treasury, in accordance with the imperial universities regulations.

(*a*) *The Tokyo Imperial University.*—The Tokyo Imperial University, which consists of the defunct Tokyo University, the engineering college (created in 1885), and the Tokyo Agricultural and Dendrological College (affiliated in 1890), had its origin in the "Institute of Western Knowledge," that existed in the latter days of the Tokugawa Shogunate. It was transferred to the control of the department of education of the rehabilitated Imperial Government in 1871. The Tokyo Medical College was united to it six years after, and with this union the name was again changed to the Tokyo University.

The university comprises six colleges, namely, those of law, medicine, engineering, literature, science, and agriculture. The college of law is subdivided into two courses, that of law proper and that of politics; and in the same way the college of medicine consists of the courses of medicine and pharmacy. The college of engineering consists of nine courses, namely, civil engineering, mechanical engineering, shipbuilding, electric engineering, technology of arms, architecture, chemical technology, technology of explosives, and mining and metallurgy. The college of literature includes philosophy, Japanese classics, Chinese classics, Japanese history, general history, philology, English literature, German literature, and French literature. The college of science is made up of seven courses—mathematics, astronomy, pure physics, chemistry, zoology, botany, and geology. Lastly, the college of agriculture comprises the courses of agriculture, agricultural chemistry, and veterinary medicine.

The number of chairs is 29 for the college of law, 27 for the college of medicine, 29 for the college of engineering, 21 for the college of literature, 21 for the college of science, and 22 for the college of agriculture.

The students who have finished the university preparatory course in a high school are admitted to colleges of their own choice. When, however, the number of candidates is in excess of the accommodation in a given college, admission is made by competitive examination. In case the number of applicants for admission falls short of the number of places vacant, the deficiency may be filled with the graduates of schools judged by the minister of education to have a course of equal standing with the university preparatory course, or by those who have passed the examination arranged by the colleges concerned and conducted at the respective high schools, the examination to be suited to the scholarship of the schools.

Digitized by Google

The term of study is not fixed for the college of law, the diploma being given to those who have passed four academic examinations.

In the course of pharmacy of the college of medicine it lasts four years, while in all the other colleges it is three years.

Besides the regular courses mentioned above there is a postgraduate course, the term of which lasts five years. This special establishment is known by the name of "University Hall." The students of law studying at the hall are precluded during the first two years from attending to any work not connected with the subject of their special study; and the students of literature may not attend to any work not connected with their study, unless with the consent of the college of literature. These two kinds of hall students are also prohibited from residing elsewhere than in Tokyo. The hall students of medicine, engineering, science, and agriculture are under obligation to devote themselves for the first two years to their respective courses of study; nor may they attend to work not connected with the subjects of their study unless with the consent of the deans of their respective colleges. At the end of the two years the students have to report to their deans the progress they have made in studies. This report is to be submitted at the end of every year by the students of law and literature studying in the hall. The reports are then submitted by the deans to the examination of the faculty meeting.

Those students of the hall who wish to obtain the degree of "Hakushi" must submit at the end of the prescribed five years to the deans an essay on their special subject of investigation. A committee will be elected from among the members of the faculty to examine the essays submitted. The applicants for the degree may be required to undergo examination when it is judged necessary by the committee.

The provisions apart from class rooms are the library for the whole university; hospitals with all the accommodations pertaining thereunto for the college of medicine; the historiographical works and reports of linguistic investigations of the Japanese language for the college of literature; the Tokyo Observatory for the college of science, the observatory undertaking astronomical observations and the compilation of almanacs. The same college has also attached to it the botanical garden, seismic observatory, and marine laboratory, while the college of agriculture has a nursery bed, veterinary hospital, orchard, and training forests.

At the end of March, 1902, the faculty of all the university colleges comprised 104 professors, 51 assistant professors, 72 lecturers, and 18 foreign professors, making a total of 245. The alumni as computed from the foundation numbered 1,336 for the college of law, 715 for the college of medicine, 1,072 for the college of engineering, 542 for the college of literature, 380 for the college of science, 481 for the college of agriculture; in all, 4,521. The students numbered 467 for the university hall, 969 for the college of law (besides 26 in the elective course), 421 for the college of engineering (besides 6 in the elective course), 285 for the college of literature (besides 17 in the elective course), 65 for the college of science (besides 3 in the elective course), 65 for the college of agriculture (besides 275 in the practical course); in all, 3,121, classified into 2,670 students proper and 451 students in the elective and practical courses, including 11 foreign students.

(*b*) *The Kyoto Imperial University.*—Established at Kyoto in June, 1897, by imperial ordinance, the university had at first only the combined college of science and engineering. In 1899 the colleges of law and of medicine were added. The collegiate provisions are not in conformity with the imperial ordinance relating to universities in that the university possesses only colleges of law, medicine, and science and engineering, no college of literature yet existing.

Digitized by Google

The college of law comprises the two courses of law and politics, the college of medicine contains only the one course of medicine, and the college of science and engineering the following eight courses, viz, mathematics, physics, pure chemistry, chemical technology, civil engineering, and mining and metallurgy. The qualification for admission is equal to that for the Tokyo Imperial University. The term of study extends three years for the colleges of law and science and engineering, and no students are allowed to remain in one course for more than six years. The term for the college of medicine lasts four years, and no student may remain in it for eight years or above.

Outsiders may attend lectures in one or more subjects at a college when there is room for them.

In the college of medicine licensed practitioners may be admitted as elective students. Their term may not exceed one year. The number of chairs is 24 at the college of law, 27 at the college of medicine, and 26 at the college of science and engineering.

2. *Higher schools.*—There are eight higher schools, respectively designated the first to sixth higher schools, the seventh Zoshikan higher school, and the Yamaguchi higher school. They are all Government institutions. The first higher school is located at Tokyo, the second at Sendai, the third at Kyoto, the fourth at Kanagawa, the fifth at Kumamoto, the sixth at Okayama, and the seventh at Kagoshima. The Yamaguchi higher school is at Yamaguchi.

The higher schools were formerly called higher middle schools, and in 1886 five such schools were created at as many places, and gave instruction to those young men who wished to enter the university or to enter business. The schools were allowed to establish courses in law, medicine, engineering, literature, science, agriculture, and commerce. The courses of medicine were in general separate establishments. At the same time there were the Yamaguchi higher middle school and Zoshikan higher middle school, which were originally founded by private individuals, but were placed under the control of the Government.

In 1894 the imperial ordinance relating to higher schools was issued to supersede the higher middle school regulations, and the new title of higher school was given to those institutions. According to the regulations, the main object of the higher schools was to teach the students in special subjects and to give at the same time, and subordinate to this main work, a preparatory education for those who aspired to enter the university. * * *

3. *Special schools of medicine.*—The medical schools are situated in Chiba, Sendai, Okayama, Kanagawa, and Nagasaki. They were formerly medical departments of the higher middle schools and the higher schools. In April, 1901, they were converted into independent institutions. Prior to the detachment a course of pharmacy was added to each medical department. The special school of medicine is connected with the prefectural hospital of the place where it is situated, and the students are thus given opportunities of acquiring experience and of attending to clinical lectures.

4. *The Tokyo Fine Art School.*—This school was established in November of 1888, though strictly speaking this was not the first art institution in Japan, for as early as 1876 an art school was established by the department of public works and students were taught the subjects of painting and sculpture. In 1884 the committee for the investigation of drawing was appointed in the department of education, and in the following year commissioners on painting and drawing were appointed. Both the committee and commissioners were made to carry out inquiries into the subject of art education, with special bearing on painting. The inquiries resulted in the creation of the Tokyo Fine

Digitized by Google

Art School, and it was opened for work in 1889. The course of study was divided into two departments—one being the ordinary course, lasting two years, and the other the special course, lasting three years. The practical education in the former consisted of instruction in painting, sculpture, and applied art; the last divided into metal work and lacquer work. The organization has since been changed several times, with the result that the school has finally attained its present state of comparative perfection. At present the school consists of four departments, namely, painting, design, sculpture, and applied art, the last divided into glyptic art, metal laying, metal casting, and lacquer work. Architecture is lacking for the present. The course of study lasts four years in each department, and there is one year of preparatory study in each department.

5. *The Tokyo Foreign Language School.*—This school was first established in April of 1897, as an institution affiliated to the higher commercial school. Two years later it was separated and made an independent school under the above-mentioned title. The school has a precursor which existed as early as 1874. In that year the two courses of English and French that formed part of the then university institution, and the language school in the foreign office, teaching German, Russian, and Chinese, were combined under the name of Tokyo Foreign Language School. At the same time the Tokyo English Language School was founded, and the department of English in the foreign language school was transferred to it. In 1880 the department of the Korean language was created, while in 1884 the higher commercial school was founded, subordinate to the language school. Next year the language school and the commercial were combined into one institution bearing the title of the Tokyo Commercial School. Two years later the department relating to foreign languages was abolished. Eleven years later the school was resuscitated, as described before. The present school contains the seven departments of English, French, German, Russian, Spanish, Chinese, and Korean. The course of study extends over three years.

6. *The Tokyo Music School.*—The appointment in the department of education of a number of commissioners on music in 1879 was the origin of this school. In the following year a music teacher was engaged from America. He and some Japanese experts were made to carry out an investigation on matters musical, both foreign and Japanese, and especially on the songs and arts that had previously existed in our country. Those that were available were set to music with or without modification, while some new airs were composed, and for the first time the adapted music was taught to the students of the Tokyo Normal School, the Tokyo Women's Normal School, and the Peers' School. A number of students were also taken by the commissioners, and those students may be regarded as the first regular music students in Japan. In 1887 the scope of the education was enlarged, resulting in the creation of the Tokyo Music School. In 1893 the school was subjoined to the higher normal school, to be again converted into an independent institution in 1899.

The school contains five different departments, namely, the preparatory department, the main department, the special department, the teachers' department, and the elective department. The main department is further subdivided into the vocal course, instrumental course, and singing course. The teachers' department is also subdivided into the A section and the B section, the former to train teachers qualified to teach in normal or middle schools and higher girls' schools, the latter in primary schools. The term of study lasts one year for the preparatory department, three years for the main department, two years for the special, two years and seven months for the A

Digitized by Google

section of the teachers' course, and one year for the B section. The term for the elective department is not definitely fixed.

IV.—TECHNICAL EDUCATION.

A.—Schools Relating to Manufactures.

1. *Higher technical schools.*—There are three higher technical schools, these being the Tokyo Higher Technical School, the Osaka Higher Technical School, and the Kyoto Higher Technical School. They are all Government institutions.

(*a*) *The Tokyo Higher Technical School.*—Founded in 1881 under the style of the Tokyo Technical School, it assumed its present name in 1900. The school devotes itself to giving instruction, both theoretical and practical, to those who aspire to engage in manufacturing and technical work. It contains six different departments, these being dyeing, ceramics, applied chemistry, mechanics, electricity, and designs as applied to the manufacturing industry. The dyeing department is further subdivided into dyeing proper and weaving, while the department of electricity is subdivided into electrical engineering and chemical electricity. The school has attached to it an apprentice course.

(*b*) *The Osaka Higher Technical School.*—This school was founded in the city of Osaka in 1896, and it aims at educating those who have to engage in industrial work. The courses provided in it are mechanical engineering, chemical technology, and shipbuilding. The chemical department is subdivided into five different branches, these being applied chemistry, dyeing, ceramics, brewing, and metallurgy. The shipbuilding department is subdivided into the two branches of hull work and machinery.

(*c*) *The Kyoto Technical School.*—This is the latest of the three, having been established in 1902. The school educates those who wish to engage in manufacturing industry or to become teachers in technical schools. This school comprises the three courses of dyeing, weaving, and designing.

2. *Technical schools.*—The technical schools are institutions which give a technical education of secondary grade. They are either prefectural or communal schools. The curriculum of the schools of this kind comprises morals, reading, composition, mathematics, physics, chemistry, drawing, gymnastics, and practical training in the technical subjects taught. Geography, history, natural history, foreign languages, political economy, statute laws, and bookkeeping may be added to the curriculum, the number of such additional subjects to be one or more, according to circumstances.

The technical subjects in which a practical training is to be imparted to the students are selected from the following, the number of such subjects to be one or more, according to circumstances: Civil engineering, metal work, shipbuilding, electricity, woodwork, mining, dyeing, ceramics, designing.

3. *Apprentice schools.*—The school of this kind is intended to give the necessary teaching to those desirous of becoming mechanics. It is either a prefectural or communal establishment, and may be attached to either an ordinary primary or a higher primary school. The subjects taught are morals, arithmetic, geometry, physics, chemistry, drawing, and practical training in one or more technical subjects. All these subjects, with the exception of morals, may be either optional or suitably modified according to local requirements, while the technical subjects for giving practical training may be limited to those industries or trades carried on in the neighborhood of the school. The term of study ranges from six months to four years, and the teaching may be conducted on Sundays and in the evenings, besides at ordinary hours. It may also be limited to certain seasons.

Digitized by Google

B.—SCHOOLS RELATING TO AGRICULTURAL EDUCATION.

1. *Higher agricultural institutions.*—There are, besides the College of Agriculture of the Tokyo Imperial University, two higher institutions devoted to agricultural education, the Sapporo Agricultural College and the Morioka Higher Agricultural and Dendrological School, both being Government establishments.

(*a*) *The Sapporo Agricultural College.*—Founded at Sapporo, Hokkaido, in 1875, this institution gives education in the higher branches of agriculture, theoretical and applied, and other subjects required in the work of exploiting the island of Hokkaido. The courses consist of main course, preparatory course, civil engineering course, forestry course, and practical agriculture course. One conspicuous feature of this institution is the possession of a large quantity of arable land, a large tract of forest land, about 200 horses and cattle, a very extensive botanical garden, and a museum containing over 12,000 specimens. These are quite sufficient to satisfy the demands of the faculty and students for materials and opportunities, both of scientifical research and practical training.

(*b*) *The Morioka Higher Agricultural and Dendrological School.*—The school was opened only in April, 1903, the courses provided being in agriculture, dendrology, and a veterinary course.

2. *Agricultural schools of Class A.*—The schools belonging to this category are either prefectural or communal schools, and are intended to give a scientific and practical training to farmers or their sons. The main aim kept in view is to impart necessary knowledge to future farmers of the middle class. The principal subject taught is agriculture, but besides this the subjects of sericulture, forestry, and veterinary surgery may be provided, the number of subjects to be one or more.

A school of this kind has to provide itself with suitable accommodations for giving practical training to the students, these accommodations differing in character according to the nature of the principal subject taught.

3. *Agricultural schools of Class B.*—A school of this category is lower in grade than the one mentioned in the preceding paragraph and the term of study is not to exceed three years. The object of this school is (*a*) to impart elementary agricultural knowledge to those who have finished their primary education, and (*b*) to teach farmers within a short period of time agricultural subjects closely connected with the local conditions.

For those who belong to the former class the term is from two to three years, while the term may not exceed one year for the students of the latter class. The longer term school may be a permanent establishment, but the other may be temporary and the class rooms may be provisionally established at different places. A school of this grade may be either a prefectural or a communal establishment.

In October, 1902, the record of these two grades of schools read as follows:

Number of schools	93
Number of teachers	733
Number of students	9,763
Number of graduates	1,755

C.—SCHOOLS RELATING TO FISHERY.

The schools of this description are comparatively few in number. There is only one institution where higher education on the subject is given, and that is the fishery school under control of the department of agriculture and com-

Digitized by Google

G.—Technical Education Funds.

As mentioned in the preceding part, the Government has been paying since 1894 no small sum, comparatively speaking, toward the encouragement of technical education. The schools enjoying this help are generally technical schools maintained by the public funds, and those maintained by industrial or commercial association may also participate in the benefit. The sum set apart on this account was at first limited to $75,000, but has since been increased till at present it amounts to $160,000. This increase was owing to the founding of a large number of new technical and commercial schools subsequent to the coming into operation of the encouragement programme. At first there were about forty or fifty schools that were allowed to participate in the fund, but the number increased to 179 in March, 1901, and to 210 a year after.

Theoretically, the help from the funds may equal the sum disbursed by the founders of a school for maintaining it, but owing to the large number of schools entitled to the allowance from the funds, the rate of the help generally ranges from 16 to 25 per cent of the amount of maintenance.

H.—Training of Technical School Teachers.

With the advance of technical education and the increase in the number of technical schools and students, provisions for supplying teachers qualified to undertake the work of instruction are required. In pursuance of that object the department issued, in April, 1899, rules relating to technical education teachers, which were amended two years after with the object of enlarging their scope of operation. Some of the details of the working of this provision are as follows:

1. *Help to students aspiring to become teachers of technical schools.*—The sum of $3 a month is being furnished by the department of education to those students who engage to become teachers of technical schools after their graduation, the students being those of the following institutions: Course of agriculture (both main and practical) of the College of Agriculture of the Tokyo Imperial University, Tokyo Higher Commercial School, Tokyo Higher Technical School, Tokyo Nautical College, Tokyo Fine Art School, and the Fishery School (under control of the department of agriculture and commerce).

2. *Training schools.*—The college of agriculture, the Tokyo higher commercial and the higher technical schools also establish teachers' training courses of agriculture, commerce, and technology, respectively, and teachers qualified to teach at the technical continuation schools are being trained.

V.—LIBRARIES.

The imperial library is a Government establishment and is situated in Tokyo. It was established in 1872 in the premises of the museum controlled by the department of education. It is the pioneer institution of the kind in Japan.

In March, 1902, the library contained 363,661 volumes of Japanese and Chinese works, and 54,931 volumes of foreign works; in all, 418,592 volumes. During the year ending on the above date the library was open 334 days and was visited by 133,803 persons, the daily average being 400. The accommodations being judged inadequate to the growing number of visitors and of the books, pictures, etc., to be kept, the work of constructing a new building has been started.

Of the local libraries the one in Kyoto is the oldest, followed by the two in Osaka. At that particular date (1892) libraries of all kinds existing throughout

Digitized by Google

the country numbered 49, containing 408,570 volumes. The visitors to the local libraries numbered 107,790, a daily average of 10 persons during the year mentioned above. Of these libraries the most noteworthy in the relative perfection of their accommodations are the library belonging to the Imperial Education Society in Tokyo and the library maintained by the prefecture of Kyoto. The library maintained by the prefecture of Miyagi comes next. The rest are of smaller scope and visited by a smaller number of people.

SOME OF THE EXHIBITS.

The exhibits of the Imperial University of Tokyo are chiefly from the college of science, the college of medicine, the college of literature, and the college of agriculture. Among the exhibits from the college of science are copies of the journal issued by the college. The results of the original research by the instructors and students in the university hall are published in the journal, and some of the noteworthy achievements by the Japanese in the fields of science and art are presented here. The most interesting feature in the exhibits from the college is the relics of the Stone Age discovered in various provinces in Japan. These prehistoric remains show the numerous races or tribes that inhabited the Japanese islands and throw much light on the study of anthropology.

Another noteworthy feature in the exhibit of this college is the apparatus for measuring the variation in length of a magnetized body by means of magnetization, invented by Professor Nagao, of the Imperial University of Tokyo. By the use of this apparatus measurements of the variation may be had, under conditions obtained by optical arrangement, having an accuracy of five-millionths of a centimeter. The results of the investigations in magnetism pursued by the aid of this apparatus were published in the Philosophical Magazine, issued 1894–1902, and in other scientific periodicals, such as Wiedemann's Annalen.

A tromometer, which is the invention of Professor Omori, of the Tokyo University, and others, is also exhibited by the science college. This instrument was originally designed for the use of the earthquake investigation committee appointed by the Japanese Government. This apparatus differs from an ordinary seismometer in the fact that it may be used to register much finer vibrations of the earth than it has hitherto been possible to observe by other instruments. Since the invention of the tromometer seismology in Japan has reached such a high state that it is now possible to predict earthquakes twenty-four hours in advance.

Of the exhibits of the college of literature the chief feature is the collection of apparatus used in the psychological laboratory. This apparatus includes many inventions by the Japanese scientists.

Anatomical models made of paper and paper parchments are exhibited by the college of agriculture. These show in every detail the anatomical features of the domestic animals.

Among the exhibits from the highest grade of industrial schools the most interesting feature is the method of coloring metals. The method of coloring metals was originally a Japanese art, which the French artists have tried to imitate. This Japanese art has been kept secret for a long time. As the result of teaching this art to the students of the schools improvements have been introduced till the art has almost attained perfection, and the Japanese to-day are able to obtain the color without using any coloring matter and in such manner that the color will never fade from the metals. This new method was invented by Mr. Kobayashi, assistant professor at the higher technical school.

The girls are separated in groups or households in the cookery school, usually three girls in each. Every household has its own range, its own kitchen table, and its own cupboard with pans, crockery, and kitchen utensils; it cooks the dinner for from 6 to 10 children. The instruction every day begins with a lesson concerning the menu, the quantity of material, with wholesale and retail prices, how it is to be dressed, its nutritious properties with relation to the price, etc. Then follows immediately the practical part of the work, which the teacher superintends to see that the instruction given is correctly put in practice.

The school kitchen exhibit shows a complete school kitchen furnished with kitchen range, table, washstands; cupboards containing kitchen utensils, glassware, pots, and pans, specimens of food conserves, etc.; a blackboard on which are to be written the bill of fare, the ingredients to be used, and their prices; pictures, etc. There is also exhibited a very interesting model of a school kitchen, executed in one-eighth scale after one intended for six groups or households in one of Stockholm's newest common schoolhouses.

During later years a reform in the teaching of drawing has been undertaken in Sweden—i. e., copying from drawing has been replaced by drawing from actual objects, selected, of course, after certain rules. The fundamental principles are as follows: Instruction in drawing should be chiefly based upon the immediate reproduction of characteristic forms from the child's surroundings, both in nature and in daily life; should develop the ability of the child to observe independently, understand and reproduce an object both as to form and color; and should be given in connection with the instruction in other subjects. Drawing includes free-hand drawing and geometrical drawing. Free-hand drawing is given partly as free and partly as systematically arranged exercises. The free exercises are given entirely in connection with the instruction in other subjects and are conducted by the class teacher. The more systematically arranged instruction is given in its first stages as class instruction by the class teacher and in its later stages as individual instruction by special teachers.

In the drawing section is exhibited show cases containing objects which are used as models for instruction in free-hand drawing and in geometrical drawing, pupils' work showing the progress in free-hand drawing as well as that in the more systematically arranged drawing, an adjustable drawing desk with stool, and photographs of room for drawing lessons.

Sloyd instruction for boys according to the Nääs system has been introduced into almost all of the Swedish common schools. Sloyd teaching is intended as a means of education on the following lines: To awaken an interest in and a respect for manual labor; to accustom the pupils to habits of order, exactness, attention, and perseverance; to develop in the pupil dexterity, promptitude, judgment, and skill; to train the eye to discern and the hand to execute; to develop a sense of form and taste, and to strengthen the physical powers.

Sloyd teaching for boys in the common schools of Stockholm embraces three kinds of sloyd: Cardboard sloyd, principally intended for children 10 to 11 years of age; wood sloyd, principally intended for children 11 to 15 years of age; metal sloyd, principally intended for children 12 to 15 years of age. The sloyd teaching is conducted by the teachers of the common schools—the cardboard sloyd by women teachers, the wood and metal sloyd by men teachers.

The pupils work with the help of models and drawings. Time: Cardboard sloyd, four to five hours a week; wood and metal sloyd, four to seven hours a week.

The exhibits in the sloyd room for boys are as follows: Three places for workers in cardboard, wood, and metal sloyd, respectively, with tools neces-

Digitized by Google

sary for each pupil; also cabinets containing specimens of model tools. Accompanying these there is a set of models for cardboard sloyd 100 in number, one for wood sloyd 100 in number, and one for metal sloyd 30 in number, all executed by pupils, and drawings intended as guides in executing the work. All the work of the pupils is provided with labels giving the names of the pupils, their age, and the time taken to execute the work.

Instruction in girls' sloyd is not obligatory in the schools of Sweden. A subvention from the State was first obtained for girls' sloyd in 1897, though boys' sloyd enjoyed that advantage some twenty years earlier. Girls' sloyd has, notwithstanding, been continued, and during the last two decades it has even succeeded in obtaining a place in the curricula of many schools where it was previously wanting. The cause of this is that we begin more and more to see the significance of manual work as a means of education.

In connection with this the necessity has arisen of having a system for the subject in question. Such a system existed already in Germany, viz, the so-called "Schallenfeldt method." In the beginning of the eighties this method was naturally introduced in Sweden, but was soon found to be less suited to our circumstances. The question then was to work out of this, so to speak, a Swedish method of our own. An attempt in this direction is the "Stockholm method" (common school method), planned by Miss Hulda Lundin, which in a comparatively short time has gained an extensive use both in our training colleges and in the secondary schools for girls.

The aim of instruction in girls' sloyd is to exercise hand and eye, to quicken the power of thought, to strengthen love of order, to develop independence, to inspire respect for carefully and intelligently executed work, and at the same time to prepare girls for the performance of their domestic duties. Experience has proved that the desired results can be best reached by practical demonstration of the subject, progressive order with regard to the exercises, and class instruction.

The exhibits in the sloyd room for girls are as follows: Two cabinets, containing a complete set of models executed by pupils and arranged according to the course of instruction, and specimens of material used during the instruction; worktables; two frames for demonstrating needlework and darning; blackboards on which, after taking measure, the pupils draw patterns; model plates and plates showing correct and incorrect positions of the body when at work; photographs of sloyd rooms for girls.

Pedagogic outdoor games.—The efforts to introduce pedagogic games in schools have been made partly in consequence of their hygienic importance, partly owing to their educational significance. Outdoor games and athletic exercises in general form a powerful means of counteracting the pernicious effects of sedentary work in the schools, the injurious, one-sided intellectual strain, as well as the effects of an unhealthy mode of life. They form a necessary and natural complement to the Swedish school gymnastics, and are besides valuable as a means of developing character.

Pedagogic games are not of long standing in Sweden. Between the years 1880 and 1890 the first attempts were made in Stockholm to introduce them in Swedish schools, though with but little success. One of the results of these efforts, however, was the forming in Stockholm of the Association for Promoting Free Games for the Young, which kept up its efforts, though they were in general more particular in the direction of promoting sport rather than pedagogic games.

In 1894 the association of teachers in Gottenborg took the question into consideration, with the result that an organized system of games was estab-

Digitized by Google

lished at the public secondary schools in the autumn of the same year. The city of Gottenborg granted, once for all, a sum of money for the purpose of providing playgrounds. Since then games have been carried on at these schools, and from Gottenborg the interest for pedagogic outdoor games has spread all over the country.

In 1898 an association was formed in Gottenborg for promoting outdoor games for the young. Through the association games have been introduced in the secondary schools for girls of the city and have been practiced there with increasing interest. In 1895 the common schools of Gottenborg followed the example of the State secondary schools and introduced school games, making them a permanent feature of the school system, supported by the city and by private donations. Certain hours were allotted to games, and a staff of paid teachers from among those attached to the school were appointed to organize the games.

From Gottenborg games were introduced in the Sloyd Training College, Näas, which has greatly furthered their spread throughout the country. Since 1898 male and female pupils, chiefly teachers from the common schools, have taken part in courses for the theory and practice of games organized at Näas.

In many places in Sweden associations have now been formed for promoting games, and games have been conducted in the public secondary schools as well as in the common schools. The interest in these games is increasing, and at the Swedish school meetings the question of games has been a standing topic.

The work that has been done in Gottenborg and Stockholm in recent years has been important for the further development of pedagogic outdoor games in common schools. In the capital the necessary providing of good playgrounds in different parts of the city has been acknowledged by the authorities. Organized games in the common schools are in full operation, partly during the school term and partly during the summer vacations, and public exhibitions of games are arranged between whiles. The common school board for the city of Stockholm accords a yearly grant for the furtherance of school games.

In the Swedish common school exhibit is a complete collection of material for the organized games played in the common schools of Stockholm, viz, balls, bats, ball frames, and marks for different kinds of games with balls; nine pins and balls; snowshoes; also photographs of children playing, and books containing instructions for the right way of playing the games. There is also exhibited an interesting painting entitled "Tug of War," by the Swedish painter, Gunnar Hallstrom.

II. PEOPLE'S HIGH SCHOOLS.

In the autumn of 1868 the first people's high school ("Folkhögskolor"), adapted from Denmark, was established in Sweden. At the present time Sweden has more than 30 schools of this kind.

The purpose of the people's high school is (1) to inspire young men with a fervent and Christian faith, a vigorous patriotism founded on an acquaintance with the natural conditions and history of Sweden, and a sound knowledge of the rights and duties of the Swedish people; (2) to give these young men an elevating insight into the concordant phenomena of creation, the forms, powers, and evolution of nature; and (3) to teach them how to work as law-abiding citizens, each one in his profession, and with loyalty and disinterestedness, to the benefit of his native country and himself. All instruction in the people's high schools is to be simple and clear, its aim being to warm the heart, raise the intelligence, purify the imagination, mold the character into firmness and stability, and thus to make the young men fully developed—to make them skilled laborers and progressive citizens.

Digitized by Google

The aim of the schools being, as already mentioned, to impart human and civic as well as scientific and practical education, the different schools usually divide the subjects of instruction into two groups. One of these groups comprises history and geography (principally that of Sweden), municipal laws, political constitution, political economy, and, as a very important part of the schedule, instruction in the mother tongue, orally or by means of written work, including the reading of the greatest poets of the country. The other group comprises natural history, arithmetic, geometry, drawing (with a special view to the contingency of the pupils wishing to be able, if necessity arises, to sketch or design their own dwelling houses and offices), surveying, leveling, mapping, and bookkeeping. As a stimulating element, singing, frequently performed not only during special hours of instruction, but also between or during the class exercises, is included.

The average age at which pupils enter is 21 or 22. The age for admission was, however, fixed at 18, a regulation founded on the principle adopted by Grundtvig, the father of the people's high schools in Denmark, as by the Swedish count, Rudenskold, the generous promoter of the diffusion of knowledge, namely, that youth is the best age for enlightenment, and that he only who has passed through childhood is able to receive knowledge with a full expectation of its being useful, both practically and morally.

The State has not only generously provided for the maintenance of the schools, but has also since 1883 granted scholarships to poor pupils at the people's high schools for men as well as at those for women. These grants have amounted since 1901 to 25,000 kroner annually, while in 1883 they amounted to no more than 15,000.

At the St. Louis Exposition the people's high schools are represented by photographs, literature, plans and drawings of buildings, needle and tapestry work, and a diagram showing the development of the schools.

CHAPTER XXIII.

LENGTH OF TEACHERS' SERVICE.

RESULTS OF A SPECIAL INQUIRY INTO THE CONDITIONS EXISTING IN 398 CITIES AND TOWNS OF 8,000 INHABITANTS AND OVER.

Repeated inquiries have been received at this Office during late years concerning the length of service of teachers in the United States, both the entire length of service and that in the teachers' present location. Exact information on the subject became desirable, partly for comparison with conditions in foreign countries in which careful records are kept of the length of teachers' service, partly because the results of such an inquiry will materially aid in framing rules and regulations for annuity associations and furnish a basis for pension legislation. Insurance experts asserted, when teachers' pension-fund societies first came into existence, that the contributions to the funds, then fixed at 1 or 2 per cent of the salary, were insufficient to withstand the drain which would ensue as soon as retirements were in order. This proved to be the case, and several pension societies were obliged to amend their constitutions and provide for larger contributions to the fund. Perhaps this might have been avoided had a sufficiently firm statistical basis been secured and data collected to determine the number of teachers who would be likely to soon apply for annuities. A diligent search in the annual reports of city school systems yielded but meager results; hence this special investigation instituted by this Office.

Circular letters of inquiry were sent to the school superintendents of all cities and towns of 8,000 inhabitants and over, to which 398 replies were received (72 per cent of the number of inquiries). In large cities the work of ascertaining the length of service of the teachers was very great, and in a few large cities it is not yet completed. The teachers were evidently quite willing to furnish the information asked for, since they recognized the importance of securing a basis for legislation on teachers' pensions, a question which has become more and more pressing in late years. The National Educational Association has ascertained the existing rates of teachers' pay in cities through an inquiry conducted by a special committee. This, together with the inquiry into the length of teachers' service, will furnish a reliable basis for devising measures to be taken in the near future.

The labors of a superintendent of city schools are so numerous that an inquiry necessitating extra work of no small magnitude could not be attended to immediately, but had to be deferred to a time of leisure, in many cases till after the close of the school year, hence the number of teachers who have not completed their first year of service appears too small in the following tables. This is, however, of small weight, since, by adding them to the columns of one year and two years' service, a reasonable estimate is possible. One very important result of the inquiry is the knowledge that there are more teachers of long service (thirty to forty years and over) than had been calculated by officers of annuity funds.

The percentages stated at the bottom of each column place the numbers in relation to each other and will materially enhance the value of the tables. The first three tables contain the length of teachers' service, regardless of where the services have been performed; the fourth, fifth, and sixth state the length of service in the teachers' present location. The seventh and eighth tables deal with cities of 100,000 inhabitants and over, so far as replies were received.

Subsequent contributions to these tables will make them more comprehensive and add greatly to their value.

CHAPTER XXIV.

STATISTICS OF CITY SCHOOL SYSTEMS.

LIST OF TABLES.

TABLE 1.—Summary, by States, etc., of enrollment, attendance, supervising officers, and teachers in cities containing over 8,000 inhabitants, 1903–4.

TABLE 2.—Summary, by States, etc., of school property and expenditures in cities containing over 8,000 inhabitants, 1903–4.

TABLE 3.—Various items relating to schools in cities containing over 8,000 inhabitants, computed from data given in tables 1 and 2, by States, 1903–4.

TABLE 4.—Summarized statistics of schools in cities of over 8,000 inhabitants, by divisions, etc., from 1890–91 to 1903–4, inclusive.

TABLE 5.—Comparative statistics of cities containing over 8,000 inhabitants, summarized by divisions, etc., 1903–4.

TABLE 6.—Statistics of population, school enrollment, and attendance in cities of over 8,000 inhabitants, 1903–4.

TABLE 7.—Statistics of supervising officers, teachers, property, etc., in public schools of cities of over 8,000 inhabitants, 1903–4.

TABLE 8.—Statistics of receipts of public schools of cities of over 8,000 inhabitants, 1903–4.

TABLE 9.—Statistics of expenditures of public schools of cities of over 8,000 inhabitants, 1903–4.

TABLE 10.—Summary of statistics of evening schools in cities of 8,000 population and over, 1903–4.

TABLE 11.—Statistics of evening schools in cities of 8,000 population and over, 1903–4.

TABLE 12.—Summary, by States, etc., of enrollment, attendance, supervising officers, and teachers in cities and villages containing from 4,000 to 8,000 inhabitants, 1903–4.

TABLE 13.—Summary, by States, etc., of school property and expenditures in cities and villages containing from 4,000 to 8,000 inhabitants, 1903–4.

TABLE 14.—School statistics of cities and villages containing between 4,000 and 8,000 inhabitants, 1903–4.

TABLE 15.—Summary of statistics of public kindergartens reported in cities of 4,000 population and over, 1903–4.

TABLE 16.—Public kindergartens in cities of over 4,000 inhabitants in 1903–4.

As heretofore in the statistical tables embodied in this chapter cities and towns are differentiated on the basis of population, those cities having a population of 8,000 or more constituting the first class, and the cities, towns, and villages having a population between 4,000 and 8,000, the second. Nine of the tables included in this chapter relate to day and two to evening schools in cities of the first class, and three are devoted to statistics of schools in cities, etc., of the second class. The two tables remaining exhibit the status of public kindergartens in all cities and towns of 4,000 or more inhabitants.

The inquiries instituted each year with respect to the schools in the two classes of cities or towns are practically identical. Tables 1 and 2 correspond to Tables 12 and 13, for instance. This being the case, to find the aggregate enrollment, attendance, receipts, etc., for all cities and towns of more than 4,000 population it is only necessary to add the corresponding columns in the two tables. In so far as organization, administration, etc., of the schools in the two classes of communities are concerned, it is well known that the differences are largely of degree. This is due chiefly to the fact that the larger systems have

Digitized by Google

served as the models upon which smaller systems have been constructed. As a result of this general imitation of the large systems on the part of the small there exists a homogeneity rather surprising when one considers the extent of the country and the great diversity of its local ideals and interests.

STATISTICS OF CITIES OF THE FIRST CLASS.

Below are given certain items of the statistics of schools in cities of the first class selected from the summaries and statistical tables in this chapter. Examination of this condensed summary will reveal the fact that the percentages of increase of the different items as compared with the preceding year show no wide variations. In view of the wide discussion of the decrease in the proportion of male teachers in the public schools, the matter having recently been reopened through the observations of the Mosely Commission, it is of more than passing interest to note that the statistics of the present year add further testimony to the well-known trend. The increase in the number of male teachers recorded is 0.26 per cent, or about one-fourth of 1 per cent, while that of female teachers is 2.94 per cent, or nearly 3 per cent.

Another fact apparent from the figures is that the material equipment of schools as shown in the value of school property, the expenditures for tuition alone, and the expenditures for all purposes, show a much larger proportionate increase than do the items of enrollment and attendance.

The enrollment in private and parochial schools apparently has increased at a greater rate than has the public school enrollment. The former item, however, is based almost wholly on such estimates as the different city superintendents are able to give in their annual returns to the Bureau, and consequently is subject to considerable variation from year to year. For this reason its comparison with the corresponding particular of public schools, based on exact returns, is but remotely instructive.

Summary of statistics of cities containing over 8,000 inhabitants, showing increase from previous year.

	1902-3.	1903-4.	Increase.	Increase, per cent.

SCHOOLS IN CITIES, TOWNS, AND VILLAGES OF THE SECOND CLASS.

Observation of the following summary exhibiting comparatively the status of public schools for the years 1902-3 and 1903-4 will show that 35 additions have been made to the number of cities, towns, and villages made the basis of last year's statistical exhibit. Those added to the list were such as were estimated, on a conservative basis, to have a present population of at least 4,000.

It occurs that additions to the list are about proportionately distributed among the different divisions. Particular attention is called to the fact that the summary of the

Digitized by Google

present year's statistics is for a larger number of units (nearly 6 per cent more than for last year), for the reason that without giving due weight to this factor the increases in all the items would appear unduly large, whereas, when properly considered, the ratios of growth will be seen to be about the same as for corresponding items in cities of the first class.

Summary of statistics of cities and villages containing from 4,000 to 8,000 inhabitants, showing increase from previous year.

	1902-3.	1903-4.	Increase.	Increase, per cent.
Number of city and village school systems	589	624	35	5.9

a Decrease.

KINDERGARTENS.

Table 15 is a summary of the statistics of public kindergartens in cities and villages. Of the total number of city and village systems of public schools 29.1 per cent report kindergartens. This same item for the preceding year was 26.3 per cent. Below is a tabular statement of the comparative status of public kindergartens for the years 1902–3 and 1903–4:

Summary of public kindergartens, showing increase from previous year.

	1902-3.	1903-4.	Increase.	Increase, per cent.
Number of cities and villages reporting	309	353	44	14.2
Number of schools	2,717	2,997	280	10.3
Number of pupils	177,012	191,882	14,870	8.4
Number of teachers	4,026	4,534	508	12.6

EVENING SCHOOLS.

The following figures show the proportion of cities in the United States and in the different divisions maintaining evening schools: United States, 30.3 per cent; North Atlantic division, 52.5 per cent; South Atlantic division, 13.3 per cent; South Central division, 15.4 per cent; North Central division, 12.3 per cent; Western division, 29 per cent. The tabular statement below exhibits the status of evening schools as compared with the preceding year:

Summary of evening schools for 1903–4, showing increase from previous year.

	1902-3.	1903-4.	Increase.	Increase, per cent.
Number of cities reporting evening schools	158	178	20	12.7
Number of schools	882	955	73	8.3
Number of teachers	5,126	6,310	1,184	23.1

Table 10 is a summary of the statistics of evening schools by States and divisions. It will be noted that the total number of pupils given is exclusive of pupils attending both evening and day schools. The number of teachers is in a large measure included in the statistics for day schools, inasmuch as it is widely the custom for teachers for the evening schools to be secured from the regular teaching corps. However, many cities obtain their teaching force for evening schools otherwise. Chicago, for instance, according to the annual report of its schools for 1903, formerly employed "briefless lawyers, clerks, bookkeepers," etc., for this service. To remedy this condition all former licenses were revoked in that year and the requirements made identical for corresponding grades with those obtaining in the day schools.

Owing to the inherent differences between day and evening schools, the particulars of growth and condition of the two classes of schools can hardly be expressed in commensurable terms. These differences spring from dissimilarities in age of pupils, nativity, occupation, etc. In Chicago 61.3 per cent of the number enrolled in evening schools are foreign born; in New York, 30.2 per cent; in Philadelphia, 28.4 per cent; in Jersey City, 26.8 per cent. In Chicago 34.8 per cent of the number enrolled were above 21 years of age. A small number of cities restrict free tuition to those under the maximum age limit fixed for the day schools. The large proportion of aliens seeking instruction in evening schools has made necessary much attention to elementary English. The courses of study observed cover a considerable range of subjects and possess the merit of great elasticity. As a rule manual training, cooking, sewing, stenography, bookkeeping, mechanical and free-hand drawing are in much demand. Drawing schools offering instruction in both free-hand and mechanical drawing are common types in the Eastern States. Many cities examined show a disposition to improve the facilities for instruction and to select teachers with greater care.

Evening high schools are maintained in 32 of the 178 cities reporting evening schools. There are 59 schools of this grade. Detailed statistics of some of these are included in the chapter on secondary schools in this Report. In this connection it may be noted, in so far as certain individual schools are concerned, that the figures given below will not be found in entire agreement with those used in the chapter on secondary schools. This is due to the exclusion of certain classes of students from the latter tables in pursuance of the general scheme employed therein for differentiating secondary from elementary students. Those, for instance, pursuing strictly commercial branches, such as bookkeeping and stenography, are not properly included in the high-school tables, while the table below, following the classifications obtaining in the different cities, includes them. The items shown in the following table are included in the statistics of evening schools given in Tables 10 and 11.

In several respects besides that of curriculum the evening schools of secondary grade are essentially different from the elementary evening schools. For one thing, the percentage of foreign pupils is not so large. A substantial proportion in some cities is shown to have been previously matriculated in the day high schools. Instances of preparation for college through the agency of the evening high schools are not infrequent. As an indication of increased attention to this class of schools, the recent action of Cincinnati in raising the curricula and lengthening the term of her two evening high schools may be cited. By this step they are brought up to the requirements for accredited high schools as determined by State law, and it is believed that they are in this respect unique among evening schools.

UNGRADED SCHOOLS AND CLASSES.

The wide consideration given city ungraded schools and classes merits notice. There are two distinct types of schools, each having distinct functions, bearing the above designation among the different school systems. One is to meet the needs of pupils who do not grade owing to disproportionate advancement in some lines and a corresponding retardation in others. The second class so designated is penal or corrective in its nature, designed for truant pupils, usually of that kind not sufficiently hardened to merit detention in parental or reform schools, but, nevertheless, requiring different discipline from that employed in the regular schools. Boston is a city having well-developed schools of the first type and Cleveland of the second. In the former one or more ungraded classes are established in each grammar-school district. On June 30, 1904, $5\frac{8}{10}$ per cent of the entire enrollment in the grammar schools was reported to be in ungraded classes. Providence has for some time provided special rooms for the instruction of "misfits," among which its report enumerates backward pupils, rebellious pupils, feeble-minded pupils, and newly arrived foreign pupils. The last year was the first, however, in which these classes were differentiated as to instruction and in which provision was made for each according to its peculiar needs. At the end of the January quarter, according to the annual report for 1904, there were enrolled in the first-year grades of Providence 188 pupils nine years of age, 94 ten years of age, 29 eleven years of age, 29 twelve years of age, 19 thirteen years of age, and 4 fourteen years of age, in all 363 whose ages were such as to operate seriously

against advancement with beginners. The superintendent of the New Bedford schools, in his 1904 report, observes that pupils transferred from other cities invariably do not grade well. It is easy to believe this universal, as it is not hard to understand the difficulties even the average pupil would be under to orientate himself in entirely new surroundings. When those below the average are considered, a large waste of time and power and a consequent retardation are self-evident. By reason of these transfers of pupils from city to city another element of retardation is introduced, and another class is added to those already recognized as needing instruction in ungraded schools. In the city last named, as illustrative of this shifting of school population, out of a total enrollment of 5,977 there were found to be 533 who had attended the public schools of other cities. On practically the same footing, so far as present surroundings are concerned, are those received from parochial schools, of which number there were 468. About 16 per cent of the entire enrollment were therefore under a possible handicap upon entering the public schools.

In Los Angeles, where the ungraded school has received careful trial for the past two and a half years, much good is reported to have been accomplished. It has been observed there that pupils of advanced age who were discontented in the regular grades and who, in all probability because of that discontent, would soon have dropped out through despair, did good work in the ungraded department, and some under sympathetic individual instruction did the work of two and even three terms in one. All agree that the discontent and sense of personal humiliation which pupils experience in having to remain yoked with those of inferior age from year to year, it matters not from what particular cause, are a fruitful source of loss to the grades successively advancing toward completion of the public school course. The semiannual plan of promotion has doubtless served to ameliorate the hardships springing from a too strict adherence to the former yearly plan so widely in vogue. Superintendent Chalmers, of Toledo, in his report for 1903, gives the result of his investigations as to the present status of that system, and the following figures are quoted as having more or less bearing upon this subject. He found that out of 239 cities reporting, 151 followed the semiannual or more frequent promotion plan. In the 51 largest cities of the United States 40 promote semiannually or more often.

The following statistics of enrollment of pupils of normal and of abnormal age in the different grades in certain cities are introduced as particularly germane to the subject of ungraded schools. While they are not sufficiently extensive to permit explicit deductions, yet, after allowing for departures due to local conditions, we can not fail to observe certain facts common to the nine cities examined. In the first place, we may note a general uniformity in the first year's departure from the normal age, about 20.7 per cent being the mean. In the second place, from the year of entrance to the fourth year in the case of New York City, to the fifth in Boston, Columbus, Spokane, and York, and to the sixth in Portland, Los Angeles, Williamsport, and Springfield, there is a steady increase in the ratio of pupils above the normal age, and thereafter until completion of the course a steady decline. Now two hypotheses might be permissible as to the causes responsible for this fact: First, that either the backward pupils, having reached the age where greater conscious effort was possible, have overtaken those who outdistanced them at the beginning; or, second, that there has been a steady withdrawal from school of pupils beyond the normal age expected of pupils in the respective grades. If the first hypothesis were correct, there would be little decline in the absolute numbers enrolled from grade to grade, but as this is contrary to fact, we must conclude that the second hypothesis holds. The ratio of abnormal enrollment to the entire enrollment for all the cities is 38.9 per cent; for New York, 39 per cent; for Portland, 30.2 per cent; for Los Angeles, 40.8 per cent; for Columbus, 30.5 per cent; for Spokane, 42.5 per cent; for Williamsport, 31.1 per cent; for York, 36.9 per cent; for Springfield, 51.8 per cent; and for Boston, 39.3 per cent. Some of these include, while others exclude, the high school statistics.

[a] Enrollment first year begins with pupils 5 and 6 years of age, and advances with one-year intervals. The high school enrollment does not include technical high school. Registration is for month of September, 1904.

[b] Enrollment first year begins with pupils 5 and 6 years of age, and advances with one-year intervals. The high school enrollment does not include Latin school registration, January 31, 1904.

[c] First high school grade.

DISTRIBUTION OF PUPILS IN THE SEVERAL GRADES.

The chapter on city schools in the Report for 1898 (Chapter XLVII) contained a series of tables showing the enrollment in the several school grades in 24 representative cities. The tables below present practically the same data for the present year, but include a larger number of cities. The statistics are complete as to distribution in the high school for only 46 of the 58 cities named, due to the fact that the matter was not made the subject of direct inquiry, but the data was gathered from published annual reports, only such statistics as were available from these sources having been used. The wide geographical distribution of the cities made the basis of these calculations may be noted as serving to free the ratios obtained from the element of local coloring. The fact, too, that the first table does not include such large cities as New York and Philadelphia relieves the averages of the preponderating influence of whatever may have been peculiar in the enrollment in the large communities.

The table immediately following exhibits enrollment by years of school work in 46 cities. The enrollment in these constitutes about 23 per cent of the entire enrollment in cities of the first class for the present year. Inasmuch as fewer than half of these cities maintain kindergartens, and further, since the latter do not figure in the successive grade by grade promotion systems, the enrollment in kindergartens was not included. It will be noted that 2 cities have an elementary course of 7 years, 27 of 8, and 17 of 9. This being the case, in the summarizing of the enrollment in the different grades in order to obtain the enrollment for the eighth year it was necessary to add the first year high school enrollment of cities having a seven year elementary course to the eighth grade enrollment of cities having eight and nine. The same plan was followed for the succeeding years.

Digitized by Google

Enrollment by years of continuous school work, disregarding grade or department (46 cities).

Year.	Enrollment.	Per cent.
First	196,506	19.8
Second	144,895	14.6
Third	136,298	13.7
Fourth	124,196	12.5
Fifth	106,795	10.8
Sixth	95,796	9.7
Seventh	65,075	6.6
Eighth	49,139	5.0
Ninth	32,668	3.3
Tenth	18,976	1.9
Eleventh	12,715	1.3
Twelfth	8,232	.8
Total	991,291	100.0

For consideration in connection with the above table the proportion of children of each age from 6 to 17, inclusive, in the United States, is repeated from the Report above referred to. There is no reason to believe that the ratios have very materially changed since their determination several years ago.

Age (years).	Per cent.	Age (years).	Per cent.
6	9.4	13	8.0
7	9.2	14	7.9
8	8.9	15	7.8
9	8.6	16	7.8
10	8.4	17	7.7
11	8.2		
12	8.1	Total	100.0

The following table shows the enrollment in the first eight grades in 58 cities. The enrollment in all grades and departments in these cities constitutes 43 per cent of the entire enrollment in cities of the first class (8,000 and over). It will be observed that the ratios are not made on the same basis as in the first table, as only the distribution in eight years of work is considered. As between elementary and high school enrollment, the former constitutes 94.5 per cent, and the latter 5.5 per cent of the entire enrollment. For the cities giving high school enrollment by grades 44.3 per cent are found to be in the first, 25.8 per cent in the second, 17.4 per cent in the third, and 12.5 per cent in the fourth year of high school work.

Enrollment by grades in elementary schools (58 cities).

Grade.	Enrollment.	Per cent.
First	350,116	20.7
Second	279,938	16.6
Third	266,300	15.8
Fourth	238,051	14.1
Fifth	201,447	11.9
Sixth	155,275	9.2
Seventh	114,269	6.8
Eighth	83,240	4.9
Total	1,688,636	100.0

TABLE 3. *Various items relating to schools in cities containing over 8,000 inhabitants, computed from data given in Tables 1 and 2, by States, 1903–4.*

Cities of—	Ratio of private school enrollment to enrollment in all schools, public and private.	Ratio of average attendance to enrollment (public schools).	Average number of days' attendance of each pupil enrolled.	Average length of school term.	Average number of pupils in attendance to each teacher.	Average number of teachers to each supervising officer.	Average number of seats to each 100 pupils in attendance.	Average number of seats to a building.	Value of school property per capita of pupils in average attendance.	Cost of teaching and supervision per capita of pupils in average attendance.	Total cost of schools per capita of pupils in average attendance.	Average cost per day of tuition for one pupil.	Average daily expenditure per pupil for all purposes.

TABLE 4.—*Summarized statistics of schools in cities of over 8,000 inhabitants, by divisions, etc., from 1890–91 to 1903–4, inclusive*—Continued.

Cities of—	Number of city school systems.	Enrollment in public day schools.	Aggregate number of days' attendance of all pupils.	Average daily attendance.	Number of supervising officers.	Number of teachers.			Number of school buildings.	Number of seats or sittings for study.	Value of public property used for school purposes.	Expenditure for supervision and teaching.	Expenditure for all purposes.	Enrollment in private and parochial schools (largely estimated).
						Male.	Female.	Total.

TABLE 5.—*Comparative statistics of cities containing over 8,000 inhabitants, summarized by divisions, etc., 1891–1904.*

Cities of—	Ratio of private school enrollment to enrollment in all schools, public and private.	Ratio of average attendance to enrollment (public schools).	Average number of days' attendance of each pupil enrolled.	Average length of school term.	Average number of pupils in attendance to each teacher.	Average number of teachers to each supervising officer.	Average number of seats to each 100 pupils in attendance.	Average number of seats to a building.	Value of school property per capita of pupils in average attendance.	Cost of teaching and supervision per capita of pupils in average attendance.	Total cost of schools per capita of pupils in average attendance.	Average cost per day of tuition for one pupil.	Average daily expenditure per pupil for all purposes.

* Statistics of 1902-3.
a High school was in session 190 days.
b Approximately.
c Average.
d High school was in session 200 days.
e Estimated population of the district.

Digitized by Google

TABLE 6.—*Statistics of population, school enrollment, and attendance in cities of over 8,000 inhabitants, 1903–4*—Continued.

	City.	Total population, census of 1900.	Population 1904 (Census Office estimate).	School population.		Pupils in private and parochial schools (largely estimated).	Different pupils enrolled in public day schools.			Number of days the schools were actually in session.	Aggregate number of days' attendance of all pupils in public day schools.	Average daily attendance in public day schools.
				School census age.	Children of school census age.		Male.	Female.	Total.

*Statistics of 1902-3. [a] Population of city of Concord. [b] High school was in session 190 days. [c] Approximately. [d] Estimated.

Digitized by Google

TABLE 6.—*Statistics of population, school enrollment, and attendance in cities of over 8,000 inhabitants, 1903–4*—Continued.

	City.	Total population, census of 1900.	Population, 1904 (Census Office estimate).	School population.		Pupils in private and parochial schools (largely estimated).	Different pupils enrolled in public day schools.			Number of days the schools were actually in session.	Aggregate number of days' attendance of all pupils in public day schools.	Average daily attendance in public day schools.
				School census age.	Children of school census age.		Male.	Female.	Total.

* Statistics of 1902–3.
a Cooking is taught in high school.
b In city normal school.
c Statistics of town of Danbury.
d Statistics of Rockville.
e Elective in 10 to 13.
f Includes Willimantic.
g Seven and 8 in white schools.
h Statistics of schools of Bibb County.
‡ Includes 50 rented buildings.
j Not including North Dixon.

* Statistics of 1902-3.
a Grades 1 to 6 were in session 170 days.
b Estimated.
c Includes Melrose Park.
d Does not include statistics of high school.
e Includes township high school.
f High school was in session 200 days.

* Statistics of 1902-3.

a Not including pupils in high school.

b High school was in session 200 days.

c Approximately.

Digitized by Google

TABLE 14.—*School statistics of cities and villages containing between 4,000 and 8,000 inhabitants, 1903–4*—Continued.

	City.	Population, census of 1900.	School population.		Pupils in private and parochial schools.	Different pupils enrolled in public day schools.			Number of days the schools were actually in session.	Aggregate number of days' attendance of all pupils.	Average daily attendance.	Supervising officers.	Regular teachers.			Buildings used for school purposes.	Seats or sittings for study in all public schools.	Value of public property used for school purposes.	Salaries of teachers and supervising officers.	Total expenditure.
			School census age.	Children of school census age.		Male.	Female.	Total.					Male.	Female.	Total.

CHAPTER XXV.

UNIVERSITIES, COLLEGES, AND TECHNOLOGICAL SCHOOLS.

Contents.—Number of institutions—Courses of study—Professors and instructors—Sabbatical leave of absence—Retiring allowances for officers of universities and colleges—Students—Foreign students—Subjects pursued by graduate students—Degrees—Property—New buildings—Income—State taxation for higher education—Benefactions.

The total number of institutions included in the tables of this chapter is 607, of which number 121 admit women only. Of the 443 universities and colleges included in Table 30, men only are admitted to the undergraduate departments of 130 institutions, while 313 are open to both men and women. Of the 43 schools of technology included in Table 37, women are reported in the undergraduate departments of 24 institutions.

The following-named institutions were reported as having been closed: Union Female College, Eufaula, Ala.; Lafayette College, Lafayette, Ala.; Albert Lea College, Albert Lea, Minn.; Woman's College, Oxford, Miss.; North Carolina College, Mount Pleasant, N. C.; Thiel College, Greenville, Pa.; and Valley Female College, Luray, Va. Three institutions have been transferred to the list of private secondary schools, and 25 have failed to report to the Bureau for two or more years.

COURSES OF STUDY.

The institutions maintaining certain technical courses of study are given in Table 29. During the year Trinity College, Hartford, Conn., established a course in civil engineering; Clarkson School of Technology, Potsdam, N. Y., a course in chemical engineering; Ohio University, Athens, Ohio, a course in civil and mining engineering; and the University of Wyoming a course in irrigation engineering. The Maryland Agricultural College has abolished the classical course and will confine its work hereafter to instruction in technical lines. Florida State College, Tallahassee, Fla., the College of the Immaculate Conception, New Orleans, La., and Westminster College, Meadville, Pa., report the addition of one year's work to their college courses.

PROFESSORS AND INSTRUCTORS.

The total number of professors and instructors in all departments of these institutions was reported as 17,559 men and 4,267 women. The number in undergraduate college departments was 10,664 men and 2,961 women, including 347 men and 1,407 women in Division B of colleges for women who were unclassified as to departments.

SABBATICAL LEAVE OF ABSENCE FOR PROFESSORS.

The salaries paid college professors are not very large in any institution and are very meager in a large number of them. These officials, however, by virtue of their positions are required to maintain a certain standard of living; and in order to keep abreast with what is going on in the world, and especially in their lines of work, considerable sums must be expended annually in the purchase of books, magazines, etc. It is natural, therefore, that

Digitized by Google

very few of them are enabled to provide anything for their maintenance when old age overtakes them, or to take any extended vacation without pay for study or recreation. To alleviate these conditions to some degree a number of institutions, including Harvard, Columbia, and Brown universities, the universities of Illinois and California, and Wellesley and Randolph-Macon Woman's College, have established systems of sabbatical leaves of absence. Under these systems professors are entitled to a leave of absence one year out of seven, usually on half pay. The University of California, however, allows two-thirds pay.

RETIRING ALLOWANCES FOR OFFICERS OF UNIVERSITIES, COLLEGES, AND TECHNOLOGICAL SCHOOLS.

On April 18, 1905, Mr. Andrew Carnegie, of New York, transferred to a board of trustees $10,000,000 in 5 per cent bonds of the United States Steel Corporation, the income of which is intended to provide retiring pensions for college professors in the United States, Canada, and Newfoundland, under such conditions as may be adopted by the board of trustees.

The fund is to apply to universities, colleges, and technological schools without regard to race, sex, creed, or color. State and colonial institutions are not to be included, nor such institutions as are under the control of a sect or require trustees (or a majority thereof), officers, faculty, or students to belong to any specified sect or which impose any theological test.

The letter of Mr. Carnegie to the trustees is as follows:

I have reached the conclusion that the least rewarded of all the professions is that of the teacher in our higher educational institutions. New York City generously, and very wisely, provides retiring pensions for teachers in her public schools and also for her policemen. Very few, indeed, of our colleges are able to do so. The consequences are grievous. Able men hesitate to adopt teaching as a career and many old professors whose places should be occupied by younger men can not be retired.

I have therefore transferred to you and your successors, as trustees, $10,000,000 5 per cent first mortgage bonds of the United States Steel Corporation, the revenue from which is to provide retiring pensions for the teachers of universities, colleges, and technical schools in our own country, Canada, and Newfoundland, under such conditions as you may adopt from time to time. Expert calculation shows that the revenue will be ample for the purpose.

The fund applies to the three classes of institutions named, without regard to race, sex, creed, or color. We have, however, to recognize that State and colonial governments which have established or mainly support universities, colleges, or schools may prefer that their relations shall remain exclusively with the State. I can not, therefore, presume to include them.

There is another class which States do not aid, their constitutions in some cases even forbidding it, namely, sectarian institutions. Many of these, established long ago, were truly sectarian, but to-day are free to all men of all creeds or of none. Such are not to be considered sectarian now. Only such as are under control of a sect or require trustees (or a majority thereof), officers, faculty, or students to belong to any specified sect or which impose any theological test are to be excluded.

Trustees shall hold office for five years and be eligible for reelection. The first trustees shall draw lots for one, two, three, four, or five year terms, so that one-fifth shall retire each year. Each institution participating in the fund shall cast one vote for trustees.

The trustees are hereby given full powers to manage the trust in every respect, to fill vacancies of non ex officio members, appoint executive committees, employ agents, change securities, and, generally speaking, to do all things necessary in their judgment to insure the most beneficial administration of the funds.

By a two-thirds vote they may from time to time apply the revenues in a different manner and for a different, though similar, purpose to that specified, should coming days bring such changes as to render this necessary, in their judgment, to produce the best results possible for the teachers and for education.

No trustee shall incur any legal liability flowing from his trusteeship. All traveling and hotel expenses incurred by trustees in the performance of their duties shall be paid from the fund, the expenses of wife or daughter accompanying the trustees to the annual meeting included.

I hope this fund may do much for the cause of higher education and to remove a source of deep and constant anxiety to the poorest paid and yet one of the highest of all professions.

Digitized by Google

The members of the first board of trustees designated by Mr. Carnegie are as follows: President A. T. Hadley, Yale University, New Haven, Conn.; President Charles William Eliot, Harvard University, Cambridge, Mass.; President William R. Harper, University of Chicago, Chicago, Ill.; President Nicholas Murray Butler, Columbia University, New York; President Jacob G. Schurman, Cornell University, Ithaca, N. Y.; President Woodrow Wilson, Princeton University, Princeton, N. J.; President L. Clarke Seelye, Smith College, Northampton, Mass.; Provost Charles C. Harrison, University of Pennsylvania, Philadelphia, Pa.; President Alex. C. Humphreys, Stevens Institute, Hoboken, N. J.; Chancellor S. B. McCormick, Western University of Pennsylvania, Allegheny, Pa,; President Edwin B. Craighead, Tulane University, New Orleans, La.; President H. C. King, Oberlin College, Oberlin, Ohio; President C. F. Thwing, Western Reserve University, Cleveland Ohio; President Thomas McClelland, Knox College, Galesburg, Ill.; President Edwin H. Hughes, De Pauw University, Greencastle, Ind.; President H. McClelland Bell, Drake University, Des Moines, Iowa; President George H. Denny, Washington and Lee University, Lexington, Va.; President Peterson, McGill University, Montreal, Canada; President Samuel Plantz, Lawrence University, Appleton, Wis.; President David S. Jordan, Leland Stanford Jr. University, Palo Alto, Cal.; President W. H. Crawford, Allegheny College, Meadville, Pa.; President Henry S. Pritchett, Massachusetts Institute of Technology, Boston, Mass.; F. A. Vanderlip, New York; T. Morris Carnegie, New York; and R. A. Franks, Hoboken, N. J.

At least two of the universities of this country have special endowment funds for the payment of retiring allowances to professors and other officers who have grown old in their service. The institutions referred to are Harvard and Cornell.

As early as 1879 President Eliot of Harvard University advocated the adoption of a system of retiring annuities or pensions and suggested the following as the chief reasons:

> First, it would add to the dignity and attractiveness of the service, by securing all participants against the chance of falling into poverty late in life, or of seeing an associate so reduced; secondly, it would provide for participants the means of honorable ease when the capacity and inclination to work abate; thirdly, it would promote the efficiency of the service by enabling the corporation, without inflicting hardship, to relieve from active duty officers whose powers are impaired by age; lastly, it would accomplish the very important object of making promotion through all the grades of the service more rapid than it can be in the absence of such provision.

The first contribution for the retiring fund of Harvard consisted of the sum of $1,000 given in July, 1879, by Mr. George Baty Blake. In November, 1880, the corporation of Harvard entered on its records what they considered as a satisfactory scheme of retiring allowances. This scheme with some changes was put into full effect in 1899. During the year 1880–81 an anonymous gift of $20,000 was made to the retiring allowance fund. The interest on the fund was allowed to accumulate and added to the principal until 1889 when the fund amounted to $35,027. During the year 1889–90 another gift of $200,000 was added to the principal. The fund was again allowed to accumulate and now amounts to $366,416.47, with an income in 1904 of $17,478.09.

The first payment as a retiring allowance was made in 1892–93 when $1,000 of the income was thus expended. In 1900–1901, when the retiring allowance scheme was in full effect the expenditures for such allowances amounted to $9,527.62 and had risen in 1903–4 to $17,681.78 which was a little in excess of the income from the special fund for that purpose.

The pension system of Cornell University was put into operation in June, 1903, and shortly after its adoption an anonymous gift of $150,000 for the creation of a pension fund was received. This fund is to accumulate for eleven years when it will amount to over $250,000. Under the Cornell system professors must retire at the age of 70 and contributions to the pension fund must be made by them.

Digitized by Google

Columbia University adopted a retiring scheme in 1890–91, but all payments are made out of the general funds of the university, and amounted in 1904 to $5,750. The other institutions concerning which information is at hand are the Randolph-Macon Woman's College, which adopted a retiring scheme in 1904, and the University of California.

The Nation for June 15, 1905, states that "Princeton University has for many years made provision for its professors but not systematically." It also gives the retiring scheme of Yale University, which was adopted in 1896 and amended in 1903.

The schemes adopted vary in certain particulars and are therefore given in full, as follows:

HARVARD UNIVERSITY.

The following rules concerning retiring allowances were put in force on and after September 1, 1899:

1. Any person in the service of the university and 60 years of age, who has held an office of the grade of an assistant professorship, or of a higher grade, for twenty years, shall be entitled to a retiring allowance of twenty-sixtieths of his last annual salary in activity, and to an additional allowance of one-sixtieth of his last annual salary for each year of service in addition to twenty; but no retiring allowance shall exceed forty-sixtieths of the last annual salary in full activity. In counting years of additional service, years of continuous service as member of a faculty with the title of tutor, instructor, or lecturer, or as assistant in a scientific establishment on an appointment not annual, may be added, at the discretion of the president and fellows, to the years of service as assistant professor or in a higher grade.

2. No person under 60 years of age shall be entitled to a retiring allowance; but the president and fellows may at their discretion pay to any person, who, while in the service of the university, has become incapable of discharging his duties by reason of permanent infirmity of mind or body, or has resigned before the age of 60, an allowance not exceeding that which he would be entitled to receive under Rule 1, if he had reached the age of 60.

3. No person who has been in the service of the university less than twenty years as assistant professor or at a higher grade shall be entitled to a retiring allowance; but in computing the retiring allowance of a person who entered the service of the university, as a professor or at an equal grade at an unusually advanced age, the president and fellows may at their discretion add a number of years, not exceeding ten, to his actual years of service; and such a person may be granted a retiring allowance as soon as his total service, including the constructive addition, reaches twenty years.

4. Any professor or officer of like grade entitled to a retiring allowance, who with the consent of the president and fellows shall give up a part of his work and a corresponding part of his salary, shall have a right, upon his partial retirement, to a retiring allowance computed under Rule 1 upon that part of his full salary which he relinquishes; and upon his complete retirement his allowance shall be computed on his last full annual salary, and his years of partial retirement shall count as years of service.

5. The president and fellows may, in the exercise of their discretion, retire wholly or in part any professor or officer of like grade, who has reached the age of 66, upon the retiring allowance to which he is entitled.

6. In the preceding sections, years of leave of absence are to be counted as years of active service; librarians, assistant librarians, curators, assistants in the scientific establishments, and administrative officers of long tenure whose salaries may be classed with those of professors or assistant professors are covered by the phrases "at an equal grade" or "of like grade;" and the "last annual salary in full activity" means the last regular salary as professor, excluding annual grants and extra payments.

7. The president and fellows retain power to alter these rules, without, however, abridging the rights which individuals in the service of the university shall have acquired under them.

Digitized by Google

8. The obligation of the president and fellows to pay retiring allowances will be neither greater nor less than their obligation to pay salaries: so that, if misfortune shall compel a percentage reduction of salaries, retiring allowances will be reduced in the same proportion. (Report of president of Harvard University, 1898–99.)

CORNELL UNIVERSITY.

Every professor shall retire from his professorship at the June commencement of the calendar year in which his seventieth birthday falls. The pension will be half the normal professorial salary. Professors are to contribute to the pension fund in amounts varying with the age at which the professor is admitted to the benefits of the fund. If he begins at the age of 35 the annual amount to be paid is $42, if at 40, $53, if at 45, $71, if at 50, $97. In case of resignation, death, or removal before reaching the age of 70, his accumulated contributions shall be repaid to him or to his estate, or if after being placed on the pension roll any professor dies before he has received in pension money as much as his accumulated contributions the difference shall be paid to his estate, interest to be allowed on contributions at 3 per cent compounded semi-annually. (Report of president of Cornell University, 1902–3, p. 13.)

COLUMBIA UNIVERSITY.

Any professor who has been fifteen years in the service of the college and who is also 65 years of age, may at his own option retire on half pay. (Report of president of Columbia University, 1890–91, p. 14.)

RANDOLPH-MACON WOMAN'S COLLEGE.

Any professor reaching the age of 70 years shall be retired as professor emeritus, and shall receive during his lifetime annually one-third the salary of his position on retirement, provided he shall have served the college for 25 years since the adoption of this plan. If he shall have served for a less time he shall receive one seventy-fifth part of said salary for each year of service rendered.

UNIVERSITY OF CALIFORNIA.

A professor who, after 20 years of service in the university, shall have attained the age of 70 years, shall be appointed professor emeritus with pay at the rate of two-thirds of the salary paid him during the year next preceding such appointment, provided that when request is made for a continuance in regular service by a professor to whom this rule may apply the board of regents may, by vote, temporarily suspend the operation of this rule as to such professor.

YALE UNIVERSITY.

Any professor or assistant professor who has served for 25 years and has reached the age of 65 may be retired at his own request with a retiring allowance of one-half his last annual salary. In the case of a person who entered the service of the university at an unusually advanced age, the corporation may, at its discretion, add a number of years, not exceeding 15, to his actual years of service as a basis for granting him a retiring allowance. All university instructors must retire at the age of 68, except in individual cases, where, by special vote, the corporation may determine otherwise. (Nation, June 15, 1905, p. 474.)

STUDENTS.

The total number of undergraduates and resident graduate students in universities and colleges for men and for both sexes, colleges for women (Division A), and in schools of technology for the year 1903–4 is reported as 118,029, an increase of 3,899 students over the

Digitized by Google

number for the preceding year. The number of such students for each year from 1889–90 to 1903–4 is as follows:

Number of undergraduate and resident graduate students in universities, colleges, and schools of technology from 1889–90 to 1902–3.

Year.	Universities and colleges for men and for both sexes.		Colleges for women (Division A).	Schools of technology.		Total number.

1894–95	52,586	14,298	3,667	9,467	1,106	62,053	19,071
1895–96	56,556	16,746	3,910	8,587	1,065	65,143	21,721
1896–97	55,755	16,536	3,913	8,907	1,094	64,662	21,543
1897–98	58,407	17,765	4,416	8,611	1,289	67,018	23,470
1898–99	58,467	18,948	4,593	9,038	1,339	67,505	24,880
1899–1900	61,812	20,452	4,872	10,347	1,440	72,159	26,764
1900–1901	65,069	21,468	5,260	10,403	1,151	75,472	27,879
1901–2	66,325	22,507	5,540	11,808	1,202	78,133	29,258
1902–3	69,178	24,863	5,749	13,216	1,124	82,394	31,736
1903–4	71,817	24,413	6,341	14,189	1,269	86,006	32,023

In addition to the number of students mentioned above there were enrolled 18,325 in the college departments of colleges for women (Division B). See Table 35.

What appears to be a considerable falling off in 1903–4 in the number of women students in coeducational institutions and a correspondingly large increase in the number in colleges for women (Division A) is due in a great measure to the separation of the statistics of students in the H. Sophie Newcomb Memorial College, a department of Tulane University of Louisiana, from those of the university and their inclusion in the table devoted to colleges for women (Division A).

The number of undergraduate students in the various courses of study, so far as reported, is as follows:

Classical courses (including unclassified students in liberal courses)	52,131
Other general culture courses	13,009
General science courses	9,540
Commerce	1,537
Agriculture (excluding short course students)	2,196
Mechanical engineering	6,894
Civil engineering	6,118
Electrical engineering	4,389
Chemical engineering	694
Mining engineering	2,324
Textile engineering	95
Sanitary engineering	31
Architecture	542
Household economy	691

FOREIGN STUDENTS.

The catalogues of the various institutions show that a considerable number of students from foreign countries are enrolled in the universities and colleges of the United States. The number of such students from the several countries is as follows:

Students from foreign countries.

British North America	614	Santo Domingo	10
Mexico	308	Yucatan	9
Cuba	245	Asia Minor	8
Japan	236	Denmark	8
Porto Rico	105	Egypt	8
China	93	Korea	8
West Indies	89	Persia	8
Germany	78	Ecuador	7
Australia	76	Holland	7
England	76	Austria	6
Turkey	63	British Guiana	6
India	58	Micronesia	6
Philippines	46	Siam	6
Africa	44	Greece	5
Argentina	42	Venezuela	4
Brazil	31	Belgium	3
Hawaii	28	Central America	3
Peru	28	Bohemia	2
Sweden	27	Haiti	2
Ireland	26	Poland	2
New Zealand	25	Roumania	2
Chile	21	South America	2
France	21	Wales	2
Honduras	20	Arabia	1
Italy	18	Azore Islands	1
Russia	18	Finland	1
Spain	18	Friendly Islands	1
Norway	16	Hungary	1
Costa Rica	13	Madagascar	1
Scotland	12	Malta	1
Bulgaria	11	Mauritius	1
Nicaragua	11	Panama	1
Switzerland	11	Paraguay	1
Colombia	10	Portugal	1

In this compilation are included the foreign students registered in all departments of the several institutions included in this chapter, excepting colleges for women (Division B).

Digitized by Google

The movement inaugurated several years ago for the granting of but one degree (A. B.) for the completion of any course of liberal studies still continues. Seven institutions reported during the year the discontinuance of all degrees except A. B. The institutions granting the degrees of A. B., B. S., Ph. B., or B. L. are given in Table 28.

The number of Ph. D. degrees conferred by the several institutions during the year is reported as follows:

Institutions conferring Ph. D. degree in 1904.

Institution.	On examination.		Honorary.
	On men.	On women.	
University of California	3	0	0
Leland Stanford Junior University	1	0	0
University of Colorado	2	0	0
University of Denver	3	0	0
Yale University	33	6	0
Catholic University of America	5	0	0
Georgetown University	1	0	0
George Washington University	4	0	0
University of Chicago	21	9	0
Austin College	0	0	3
Ewing College	5	0	0
Shurtleff College	1	0	0
Hanover College	0	0	1
Moores Hill College	1	0	0
Taylor University	2	0	0
Kansas City University	1	0	0
Johns Hopkins University	31	0	0
New Windsor College	0	0	1
Boston University	7	0	0
Harvard University	46	0	0
Tufts College	1	0	0
Clark University	10	0	0
University of Michigan	6	1	0
University of Minnesota	3	0	0
Washington University	1	0	0
University of Nebraska	1	1	0

University of Pennsylvania	15	3	0
University of Virginia	3	0	0
University of Wisconsin	8	2	0
Total	272	29	5

It will be noticed that but three institutions report the granting of the Ph. D. degree as an honorary degree, and the number of persons on whom it was conferred has dropped to five. The total number of honorary doctorates granted during the year was 630.

PROPERTY.

The total value of property possessed by the institutions for higher education amounts to $465,216,545, a gain of almost thirty-three millions over the amount for the preceding year. The endowment funds amount to $206,565,108, and the remainder represents the value of the material equipment. The average amount of endowment held by the institutions of the several geographical divisions of the country is as follows: North Atlantic Division, $879,876; South Atlantic Division, $109,014; South Central Division, $103,693; North Central Division, $265,330; Western Division, $560,921. The number of universities and colleges for men and for both sexes having endowment funds of various amounts is given in Table 5.

The purpose and cost of new buildings erected during the year, so far as reported, are shown in the table following.

INCOME.

The total income from all sources, excluding benefactions, amounted to $40,329,193. The proportion received from productive funds is slightly less than during the preceding year. The reports of a number of the larger institutions for the year show that the expenditure exceeded the income by a considerable amount, and in nearly all cases pleas are made for additional endowment funds. It is a well-known fact that the income derived from fees received from students forms only about one-third of the total income, the remainder necessary to meet the expenses of the institutions being derived from endowment funds, State aid, and miscellaneous sources. As the number of students increases the expenses for their instruction increase greatly in excess of the fees paid by the students, which excess must be provided from other sources, or else the tuition fee raised to such an amount as would undoubtedly work a hardship on students in moderate circumstances. Another cause for the recurring deficits is found in the lower rates of interest that are now being received on the invested funds of institutions of learning. The rate has been declining steadily for some years and is still on the downward trend.

The State and municipal aid to higher education during the year amounted to $9,922,903, of which sum $6,064,764 was granted for current expenses and $3,858,139 for buildings or other special purposes. This aid exceeded the amount for the previous year by nearly two millions of dollars.

STATE TAXATION FOR HIGHER EDUCATION.

In a large majority of the States the aid granted by the State to institutions of learning is by special appropriations by the State legislature. In a number of the States, however, provision for educational institutions has been made by means of a regular tax levy on each dollar of the assessed valuation of the taxable property. The rate of taxation for each institution in such States is as follows:

Arizona.—Three-fifths mill tax for the University of Arizona.

California.—One-fifth mill tax for the University of California.

Colorado.—Two-fifths mill tax for the University of Colorado; one-fifth mill tax for the State School of Mines; one-fifth mill tax for the State Agricultural College.

Indiana.—One-tenth mill tax for Indiana University; one-tenth mill tax for Purdue University.

Kentucky.—One-twentieth mill tax on the property of the white people for the Agricultural and Mechanical College of Kentucky.

Michigan.—One-fourth mill tax for the University of Michigan; one-tenth mill tax, but not to exceed $100,000 in any one year, for the State Agricultural College.

Minnesota.—Twenty-three one-hundredths mill tax for the University of Minnesota.

Nebraska.—One mill tax for the University of Nebraska.

New Mexico.—Sixty-five one-hundredths mill tax for the University of New Mexico; forty one-hundredths mill tax for the New Mexico College of Agriculture and Mechanic Arts; forty-five one-hundredths mill tax for the New Mexico School of Mines.

North Dakota.—Two-fifths mill tax for the University of North Dakota; one-fifth mill tax for the North Dakota Agricultural College; three one-hundredths mill tax for the School of Forestry.

Ohio.—Fifteen one-hundredths mill tax for Ohio State University; seven two-hundredths mill tax for Ohio University; one-fortieth mill tax for Miami University; one one-hundredth mill tax for Wilberforce University.

In 1903 the State of California, in addition to the regular tax levy, appropriated $100,000 for maintenance and support of the State university for each of two years. In 1904 Kentucky passed an act granting to the Agricultural and Mechanical College $15,000 annually in addition to the amount derived from the tax levy.

Alabama grants to the Alabama Polytechnic Institute one-third of the net proceeds arising from the sale of fertilizer tags, and South Carolina grants to the Clemson Agricultural College the entire proceeds of the fertilizer tax.

Digitized by Google

In addition to the States mentioned above Oklahoma, Oregon, and Wisconsin provide for the levying of a tax annually by designated officers to produce certain specified sums for the support of educational institutions.

BENEFACTIONS.

The total value of all gifts and bequests reported by the several institutions included in this chapter as having been received during the year amounted to $13,700,559. Of this amount $9,086,180 was received by the following-named 29 institutions reporting gifts amounting to $100,000 and over:

Colorado College	$100,648
Wesleyan University (Connecticut)	156,820
Yale University (Connecticut)	303,219
Armour Institute of Technology (Illinois)	250,000
University of Chicago (Illinois)	921,528
Northwestern College (Illinois)	208,000
Indiana University	100,000
Drake University (Iowa)	174,753
Iowa Wesleyan University	104,000
Johns Hopkins University (Maryland)	518,950
Massachusetts Institute of Technology	101,394
Harvard University (Massachusetts)	1,509,564
Park College (Missouri)	100,000
Creighton University (Nebraska)	200,000
Colgate University (New York)	137,523
Cornell University (New York)	615,449
Columbia University (New York)	1,407,301
Vassar College (New York)	150,943
University of Rochester (New York)	150,000
Trinity College (North Carolina)	106,000
Case School of Applied Science (Ohio)	200,000
Western Reserve University (Ohio)	106,605
Denison University (Ohio)	140,000
Oberlin College (Ohio)	229,700
Heidelberg University (Ohio)	150,000
Bryn Mawr College (Pennsylvania)	118,542
University of Pennsylvania	612,237
Brown University (Rhode Island)	113,005
University of Virginia	100,000

CHAPTER XXVI.

AGRICULTURAL AND MECHANICAL COLLEGES.

[The institutions commonly known as "agricultural and mechanical colleges" are brought together in this chapter and made the subject of special treatment, but in addition to being considered here they are included in the general tables of the different classes of schools in other parts of this Report, the dominating character of each institution determining whether it shall be classed among the universities and colleges or as a technological, normal, or secondary school; those for colored students appear still a third time, in the tables of colored schools.]

CONTENTS.—General statement—Students—Property—Land grant of 1862—Income—Endowment of August 30, 1890—Summary of legislation in 1904—Changes in admission requirements—Changes in courses of study—New buildings—Courses of study offered—Statistics.

GENERAL STATEMENT.

The growth and development of these institutions have continued during the year, as is evidenced by the increase in the number of professors and of students, in income, and in value of property, as well as by the establishment of new courses of study. The University of Arkansas and the University of Nebraska have established four-year courses of study in chemical engineering, the University of Wyoming in irrigation engineering, the Rhode Island College of Agriculture and Mechanic Arts in highway engineering, the University of Nebraska in mining engineering, the University of Maine in forestry, the Kansas Agricultural College in architecture, the Iowa State College of Agriculture and Mechanic Arts in science and agriculture and in domestic science, and the University of Arkansas in chemistry. Provision for specialized four-year courses in agriculture has been made by the Colorado Agricultural College, the New Hampshire College of Agriculture and Mechanic Arts, and the Agricultural and Mechanical College of Texas. The changes in and additions to the short courses offered are numerous.

The Maryland Agricultural College has abolished the classical course offered heretofore, and the work of the institution is now confined to the development of technical studies.

STUDENTS.

The total number of students in all departments of the institutions endowed by the acts of Congress approved July 2, 1862, and August 30, 1890, was 33,161, an increase of 2,362 over the number for the preceding year. Of the total number enrolled 6,726 were reported by the separate institutions for colored students. Excluding the latter there were in the college departments of agriculture and the mechanic arts 20,894 students, and in short and special courses 5,037 students. The number of students reported in

From States and Territories:		
From endowment funds granted by States	$124,804	
Appropriations or tax for current expenses	3,323,142	
Appropriations or tax for buildings or other special purposes	2,206,812	
Total State and Territorial aid		$5,654,758
From the Federal Government:		
Land grant of 1862	730,004	
Other land grants	115,959	
Endowment act of August 30, 1890	1,200,000	
Total Federal aid		2,045,963
From endowments from other than Federal or State sources		612,099
Tuition fees		1,047,956
Incidental fees		389,159
Miscellaneous		1,135,615
Total income		10,885,550
Received from Federal Government for experiment stations		681,000

The act of July 2, 1862, granting lands for agricultural and mechanical colleges, provides that the funds realized from the sale of the lands shall be invested in safe stocks yielding not less than 5 per cent per annum. In a large majority of the States the funds have been invested in State bonds or the money has been turned into the State treasury, the State issuing therefor an irredeemable certificate of indebtedness bearing interest at a rate varying in the several States from 5 to 8 per cent. In several of the States in which the funds had been invested in stocks or bonds maturing at certain periods, and which periods have been reached and the bonds paid, it has been found impossible to reinvest such funds in stocks producing an income of 5 per cent. The legislatures of Florida, Maryland, and Massachusetts have covered, by special appropriations out of the State treasury, deficits arising in the income from the land-grant fund of 1862 caused by inability to invest in stocks bearing interest at the rate of 5 per cent per annum. It is gratifying to note the considerable increase in State aid to these institutions, such increase over the amount for the preceding year being $1,100,146.

ENDOWMENT OF AUGUST 30, 1890.

In Table 8 are given the amounts of the funds received under the act of Congress approved August 30, 1890, that were expended by each institution for instruction in the several branches of study mentioned in the said act, as shown by the reports of the treasurers of such institutions. Of the total amount expended during the year the proportion expended for instruction in the several subjects was as follows: Agriculture, 16.8 per cent; mechanic arts, 29.5 per cent; English language, 12.3 per cent; mathematical science, 11.8 per cent; natural and physical sciences, 23.4 per cent; economic science, 6.2 per cent. A comparison of these proportions with those of the preceding year is as follows:

Subjects.	1903.	1904.
	Per cent.	*Per cent.*
Agriculture	16.1	16.8
Mechanic arts	27.9	29.5
English language	12.3	12.3
Mathematical science	12.9	11.8
Natural and physical science	24.7	23.4
Economic science	6.1	6.2

The reports show that of the expenditures of these funds made during the year, the sum of $1,105,534.38, or 91.7 per cent of the total amount, was expended for the payment of salaries. In 27 institutions all was expended for the payment of salaries.

Digitized by Google

regular four-year college courses was as follows: Agriculture, 2,096; horticulture, 209; forestry, 26; mechanical engineering, 3,767; civil engineering, 3,222; electrical engineering, 2,936; mining engineering, 922; chemical engineering, 285; railway engineering, 3; sanitary engineering, 32; textile engineering, 95; general engineering, including unclassified engineering students, 746; architecture, 227; household economy, 674; chemistry, 444; general science, 1,707. Included under general science are the first-year students of several institutions where the studies of the first year are the same for all courses and where differentiation by courses is not made until the beginning of the sophomore year. Short-course students were as follows: Agriculture, 3,651; horticulture, 69; dairying, 673; mechanic arts, 1,145; household economy, 647; mining, 93. There were reported 374 students in courses of study in veterinary medicine, 628 in pharmacy, and 17,273 students receiving instruction in military drill.

Of the students in schools for the colored race, 4,154 were in preparatory departments, 671 in college departments, 621 in short or special courses, 1 graduate student, and 1,279 in other departments. The classification in industrial courses was as follows: Agriculture or field work, 2,039; carpentry, 633; machine-shop work, 190; blacksmithing, 409; shoemaking, 133; broom making, 18; wheelwrighting, 198; bricklaying, 198; painting, 123; printing, 106; harness making, 13; tailoring, 149; plastering, 151; sewing, 2,091; cooking, 704; laundering, 517; nursing, 37; millinery, 103. Instruction in military drill was given to 1,436 students.

PROPERTY.

The total property of all the institutions amounts to $74,564,424, divided as follows:

Land-grant fund of 1862	$11,737,316
Other land-grant funds	2,125,914
Other permanent funds	14,525,596
Unsold land grant of 1862	4,404,539
Farms and grounds	6,350,992
Buildings	24,954,466
Apparatus	1,921,418
Machinery	2,088,440
Libraries	2,365,770
Live stock	319,078
Miscellaneous equipment	3,770,895
Total	74,564,424

The value of the property reported by the institutions for colored students amounts to $3,775,965.

LAND GRANT OF 1862.

The sum of $11,737,316, given above, represents the amount of invested funds derived from the sale of the lands granted under the act of Congress approved July 2, 1862. Table 1 shows that of the 10,320,843 acres granted 878,870 acres remained unsold at the close of the year ended June 30, 1904. The increase in these funds for the year amounts to $523,723, showing that the lands sold during the year were disposed of at an average price of about $14.83 per acre. Of the entire fund realized thus far from the land grant of 1862 the sum of $402,556, or about 3.4 per cent, is held for the benefit of the separate institutions for colored students in the States of Kentucky, Mississippi, South Carolina, and Virginia.

INCOME.

The amount of income derived by each institution from each of the several sources is given in Table 7. The total income, excluding the United States appropriation for experiment stations, amounts to $10,885,550, an increase of $1,329,599 over the amount for the preceding year. The amount derived from each of the several sources is as follows:

SUMMARY OF LEGISLATION, 1904.

Permanent additional income for the agricultural and mechanical colleges has been provided by the legislatures of Iowa and Kentucky. Provision has been made for numerous buildings, among which may be mentioned an appropriation of $250,000 by the State of New York for buildings and equipment of the college of agriculture at Cornell University, and an appropriation of $165,000 by the State of Virginia for buildings and equipment of the Virginia Polytechnic Institute. A brief statement of the legislation in favor of each institution follows:

Georgia State College of Agriculture and Mechanic Arts.—The catalogue and the annual report of the trustees shall contain a statement showing the avocation or profession (classified) of the parent or guardian of the students in attendance, and the place of residence (classified) whether country, village, town, or city; also a statement or table which will show, as to the alumni of the institution, the avocation or profession adopted, and especially the per centum of those who have chosen an avocation or profession in line with the studies pursued by them in college. (August 13, 1904.)

Appropriates to University of Georgia for 1905, $8,000; for interest on land-scrip fund, $6,314.14; for support and maintenance, $22,500; for farmers' institutes, $2,500. (August 15, 1904.)

Appropriates to University of Georgia, $29,000 for rebuilding science hall and furnishing same. (August 13, 1904.)

Georgia State Industrial College.—Appropriates $4,000 for completion of dormitory. (August 13, 1904.)

Appropriates $8,000 for support during 1905. (August 15, 1904.)

Iowa State College of Agriculture and Mechanic Arts.—Provides that the college shall act as a highway commission; devise and adopt plans and systems of highway construction and maintenance, and conduct demonstration in such highway construction at least once each year; disseminate information and instruction concerning highway construction, etc. (April 13, 1904.)

Appropriates $50,000 annually for additional support fund; $15,000 annually for experiment station; $95,000 for central building; heating plant, $54,500; dairy building, $45,000; equipment of dairy building, $10,000; land, $22,000; dairy herd, $7,000; poultry and equipment of dairy farm, $500; good roads experimentation, $7,000; engineering department, $6,000; $4,500 annually for additional support of the repair fund. (April 13, 1904.)

Agricultural and Mechanical College of Kentucky.—Appropriates $15,000 annually to liquidate indebtedness and to provide additional income. (March 26, 1904.)

Digitized by Google

Louisiana State University and Agricultural and Mechanical College.—Authorizes the sale or lease of property in the parish of Rapides belonging to the institution and the use of the proceeds thereof for the endowment, support, or improvement of said institution. (July 6, 1904.)

Appropriates for each of the years ending June 30, 1905, and June 30, 1906: For support, $15,000; repairs, $5,000; equipment of laboratories and shops, $10,000; maintenance of library, $2,500; establishing dairy and creamery, $3,500. Appropriates also $2,000 for insurance of buildings for three years. (July 5, 1904.)

Southern University (Louisiana).—Appropriates $10,000 for support for each of the years ending June 30, 1905, and June 30, 1906. (July 5, 1904.)

Maryland Agricultural College.—Appropriates $57,000 for the construction and completion of buildings. (April 7, 1904.)

Board of trustees shall consist of 18 members, 5 of whom shall be elected by a majority of the private stockholders of the college, the governor, comptroller, State treasurer, president of the senate, speaker of the house of delegates, attorney-general, the United States Secretary of Agriculture, and one person from each of the Congressional districts of the State, who shall be a practical farmer or immediately interested in agricultural pursuits, who shall be appointed by the governor, by and with the consent of the senate for terms of six years. (April 8, 1904.)

Appropriates $6,000 per annum for the formation and support of farmers' institutes. (April 8, 1904.)

Appropriates $9,000 for each of the years 1905 and 1906; $3,503.52 deficiency in arrears of interest due on endowment (under act of July 2, 1862) for back years, and $2,318.88 for each of the years 1905 and 1906. (April 12, 1904.)

Massachusetts Agricultural College.—Appropriates for the year 1904: $10,000 for 80 free scholarships; labor fund, $5,000; theoretical and practical education fund, $5,000; maintenance of heating and lighting plant, $500; maintenance of dining hall, $500; expenses of trustees, $500; maintenance of veterinary laboratory, $1,000. (January 30, 1904.)

Appropriates $500 for insurance on military equipment and $3,400 for coal. (June 3, 1904.)

Appropriates annually as follows: $15,000 for 120 free scholarships; $13,000 for theoretical and practical education; $10,000 for additional maintenance, of which $5,000 shall be used as a labor fund for the assistance of needy students; $1,000 for maintenance of veterinary laboratory; $10,500 for maintenance of agricultural experiment station; $500 for maintenance of heating and lighting plant; $500 for maintenance of dining hall. Repeals all acts and resolves inconsistent therewith. (June 3, 1904.)

Authorizes the State treasurer to pay annually into the technical education fund, United States grant (land-grant fund of 1862), such sum of money as may be necessary with the income of the fund to produce a sum equal to 5 per cent per annum on the $219,000 in said fund. (February 28, 1903.)

Appropriates for the income of the land-grant fund of 1862, $3,285; to restore to that fund the amount of premium paid and the deficit incurred in reinvesting said fund, $3,349.90. (January 30, 1904.)

Appropriates $424.65 to make the technical educational fund, Commonwealth grant, $142,000. Authorizes the State treasurer to invest said fund in a long term bond of the Commonwealth bearing interest at the rate of 3½ per cent per annum. Appropriates $4,000 to pay premium on such bond. (March 22, 1904.)

Massachusetts Institute of Technology.—Appropriates $29,000. (February 6, 1904.)

Mississippi Agricultural and Mechanical College.—Appropriates $65,946.36 as support fund for each of the years 1904 and 1905; $6,000 for farmers' institutes; engineering building and power house, $30,000; quarters for working boys, $3,000; new barns and improved cattle, $10,000; greenhouse, $3,000; additional room for office, commandant's house, $250; fire escape, $1,000; extension of fire protection, $2,500; sewerage system.

Digitized by Google

$1,000; Y. M. C. A., $100; equipment for mechanical department, $4,500; electrical department, $6,500; textile department, $4,587.50; geology, $2,000; English, biological, and preparatory departments, $1,075. (March 14, 1904.)

Alcorn Agricultural and Mechanical College.—Appropriates $8,000 for support fund and $1,500 for repairs of buildings for each of the years 1904 and 1905. Appropriates also $2,000 for insurance, and $5,000 for erection of dining hall. (March 17, 1904.)

New Jersey State College of Agriculture and Mechanic Arts.—Appropriates for expenses of board of visitors, $50; advertising, $90; instruction in ceramics, $2,500. (April 5, 1904.)

Cornell University.—Appropriates $250,000 for the purpose of constructing and equipping a suitable building or buildings for a State college of agriculture at Cornell University upon the grounds of said university, the buildings and equipment to be and remain the property of the State. The buildings shall include a principal building costing not more than $125,000, a hall for agricultural machinery, a stock-judging pavilion, and a horticultural building. Not more than $50,000 of said appropriation shall be used for the equipment of such buildings and the further equipment of a dairy building to be constructed at the expense of said university in place of the present dairy building heretofore erected by the State. Upon the expenditure of $40,000 by the university for said new dairy building, this appropriation shall be applicable so far as necessary, to defray the additional cost thereof in excess of that sum. Upon the completion of the new dairy building the present dairy building shall become the property of the university. The land upon which the new buildings are to stand shall be conveyed to the people of the State by Cornell University. If at any time the buildings shall cease to be available to the university for use as an agricultural college through an act of the legislature abolishing the same, the land and buildings shall revert to Cornell University, conditioned upon the payment by the university to the State of the then duly appraised value of all such buildings. (May 9, 1904.)

Appropriates for maintenance, equipment, and necessary material to conduct the State Veterinary College, $25,000; for the promotion of agricultural knowledge throughout the State, $40,000. (May 11, 1904.)

Ohio State University.—Fixes the tax levy for the years 1904 and 1905 for the Ohio State University fund at fifteen one-hundredths of a mill on each dollar of valuation of the taxable property of the State. (March 2, 1904.)

Appropriates from general-revenue fund $15,000 for temporary provision of laboratories and facilities and materials lost by fire on February 19, 1904. (March 2, 1904.)

Appropriates from the Ohio State University fund for the last three quarters of the fiscal year ending November 15, 1904, and the first quarter of the fiscal year ending November 15, 1905, $315,000, and for the last three quarters of the fiscal year ending November 15, 1905, and the first quarter of the fiscal year ending November 15, 1906, $320,000, or so much as may come into the treasury to the credit of said fund. (March 21, 1904.)

Appropriates from general-revenue fund $45,000 for school of mines and ceramics building and $50,000 for chemical building. (May 6, 1904.)

Appropriates from general-revenue fund $40,000 for school of mines and ceramics building, $50,000 for chemical building, and $25,000 for equipment of new buildings. (May 6, 1904.)

Rhode Island College of Agriculture and Mechanic Arts.—Appropriates $15,000 for support and maintenance. (March 15, 1904.)

University of Vermont and State Agricultural College.—Appropriates $60,000 for the construction and equipment of a building to be devoted to instruction in agriculture and allied subjects, and especially in dairying and experimentation. (November 16, 1904.)

Virginia Polytechnic Institute.—Appropriates $165,000 "for buildings and equipment and improvement for the Virginia Polytechnic Institute." (March 12, 1904.)

Digitized by Google

Changes in Admission Requirements.

University of Idaho.—For entrance to college courses, the rule requiring 32 points (four years' high-school work) will be put in full operation September, 1906, and 28 of these points will be required for admission in September, 1905.

Pennsylvania State College.—The entrance requirements have been advanced, solid geometry being required of all candidates for the freshman class.

Changes in Courses of Study.

1. AGRICULTURE.

Alabama Polytechnic Institute.—A summer school of agriculture for farmers was organized and conducted with success from August 4 to August 14, 1903.

Colorado Agricultural College.—The course in agriculture has been completely remodeled. The students in all departments of the agricultural division are required to take the same course of study during the freshman and sophomore years. In the beginning of the junior year those students desiring to specialize in either horticulture or veterinary science may elect the course of study offered in those departments. All the work offered in the senior year of the agricultural course is made elective. A student may thus elect a course in either animal husbandry, agronomy, or agricultural chemistry at the beginning of his senior year.

A short course in practical agriculture designed for farmers and farmers' sons will be offered in January and February, 1905. Particular attention is given to judging, feeding, breeding, and the care and management of the various classes of stock adapted to western conditions. Lectures and discussions are delivered on the various phases of general agriculture, such as potato growing, cultivation of the soil, farm crops, and the application and usage of water in irrigating. A short course of lectures on manures and fertilizers is given.

Connecticut Agricultural College.—A new course has been established in preparation for rural school teaching or for the teaching of nature study in graded schools. In this course, besides other subjects, ornithology and entomology, psychology and pedagogy are required. The elective studies are largely in natural science and agriculture.

Georgia State College of Agriculture and Mechanic Arts.—Instruction in the school of technical agriculture has been more clearly differentiated by the appointment of special officers of instruction in agronomy, horticulture, and animal husbandry.

University of Idaho.—The department of agriculture has been divided and replaced by the department of animal husbandry and the department of agronomy. The professor of agriculture has been placed in charge of the department of animal husbandry and a professor of agronomy has been appointed.

University of Maine.—A four-year course in forestry has been established, leading to the degree of bachelor of science. A special appropriation of $2,500 per annum for the purpose has been made by the legislature.

Mississippi Agricultural and Mechanical College.—Established a department of industrial pedagogy designed to prepare teachers competent to instruct in the elements of agriculture, which is to be added to the public school curriculum, and in manual training.

University of Missouri.—The short winter courses have been reorganized and shortened to eight weeks.

2. ENGINEERING.

Alabama Polytechnic Institute.—The course in mining engineering was expanded into a full four-year course, leading to the degree of bachelor of science in mining engineering. The first two years of the course are identical with the course in civil engineering.

Connecticut Agricultural College.—A course in preparation for mechanical work, surveying, or drafting is offered, including two years of German, English, mathematics, mechanical drawing, and shopwork.

Digitized by Google

Rhode Island College of Agriculture and Mechanic Arts.—Established a four-year course of study in highway engineering, leading to the degree of bachelor of science, intended to meet a demand for men competent to build better roads. The instruction given is essentially civil engineering adapted to highway construction. The adaptation consists partly in emphasizing throughout the work in the underlying principles of civil engineering those subjects that should enter directly into a road builder's training, such as, for instance, the geology of road materials. In the senior year the students' efforts are concentrated mainly on the theory and practice of the construction and repair of roads in the United States.

University of Wyoming.—Established a four-year course of study in irrigation engineering, leading to the degree of bachelor of science. The technical work includes irrigation practice, hydraulics, water supply, irrigation works, masonry construction, drainage, and laws and institutions.

3. DOMESTIC SCIENCE.

Iowa College of Agriculture and Mechanic Arts.—The two-year course in domestic science has been dropped and in its place has been substituted a four-year course in domestic science, leading to the degree of bachelor of domestic science. This course is strictly scientific in character, conditions of entrance being the same as to other college courses, graduation from an accredited high school or its equivalent.

The course in general and domestic science leading to the degree of bachelor of science has been made more liberal. The first two years of the course are identical with those of the course in domestic science. All work in the junior and senior years is elective except two hours each in domestic science and public speaking for the junior year, and in the senior year two hours in domestic science and one in public speaking for each of the two terms.

NEW BUILDINGS.

1. AGRICULTURE.

Connecticut Agricultural College.—A new brooder house has been built at a cost of $400.

University of Illinois.—A new horticultural building or storehouse, cost $12,500; agronomy storehouse, cost $12,500; beef-cattle building, cost $25,000.

Purdue University (Indiana).—Erected a new feeding barn, cost $2,000.

Iowa College of Agriculture and Mechanic Arts.—A new dairy building, cost $55,000.

Kansas State Agricultural College.—Dairy hall is 72 by 103 feet, one story and basement. It contains office, class room, butter-manufacturing room, cheese and cheese-curing rooms, hand separator room, laboratory, and refrigerator; cost, $15,000; value of equipment, $3,598.

Agricultural and Mechanical College of Kentucky.—The new building for the experiment station has two stories and basement, and is built of pressed brick with oolithic limestone trimmings. The building is 114 by 60 feet and cost $40,000.

University of Maine.—An addition has been made to the experiment-station building, cost $5,000. It is used for work in agricultural branches.

University of Minnesota.—A live-stock pavilion, cost $32,000.

University of Missouri.—A new cattle-feeding shed, 300 by 30 feet, cost $2,800; sheep barn, 55 by 35 feet, cost $1,500; horse barn for horticultural department, cost $1,200; potting room for greenhouse.

Montana College of Agriculture and Mechanic Arts.—Completed a seed barn, cost $5,000; cattle barn, cost $13,000; bee house, cost $200; engine house, cost $500; addition to dairy building, cost $400.

University of Nebraska.—Agricultural hall, brick, cost $60,000, contains on the first floor quarters of the department of animal husbandry; on the second floor, the executive offices and library of the school of agriculture; and on the third floor an auditorium. On the second and third floors are also class rooms of the departments of animal husbandry, English, mathematics, and physics.

Digitized by Google

University of Maine.—Lord Hall, cost $35,000, is used by the departments of mechanical and electrical engineering. It consists of a main part, 82 by 56 feet, two stories in height, and an ell, 125 by 42 feet, partly of two stories and partly of one story. It contains three recitation rooms, a large drawing room, shops, laboratories, and offices for the professors and instructors in the two departments.

Michigan Agricultural College.—A new heating and lighting plant, cost about $140,000.

Montana College of Agriculture and Mechanic Arts.—A brick heating plant, cost $3,500.

University of Nebraska.—The machine shop, built in 1903, is used in part for forges for ironwork and lathes for woodwork, and in part to house the farm-machinery department.

North Dakota Agricultural College.—A new heat and power building, cost $39,000.

Ohio State University.—Brown Hall, for the departments of civil engineering and architecture, was completed at a cost of $80,000. It is two stories high, with basement above grade line, and consists of a main structure with a frontage of 217 feet, and two short wings in the rear.

South Dakota Agricultural College.—The central heating plant, erected at a cost of $20,100, also furnishes steam for running the machinery in the shop and generating electricity for lighting.

Agricultural and Mechanical College of Texas.—Erected a two-story brick building for instruction in textile manufacturing at a cost of $30,000.

Agricultural College of Utah.—The following additions have been made to the mechanic arts building at a cost of $6,375: Engineering laboratory, 50 by 30 feet; motor room, 17 by 20 feet; carriage room, 36 by 36 feet; foundry, 36 by 36 feet; extension to forge shop, 46 by 36 feet.

West Virginia Colored Institute.—The trades building is a two-story brick building, 229 feet in its greatest length and 144 feet in its greatest width, with ornamentation of stone, and roofed with slate. In this building is given instruction in all the industries for boys.

3. GENERAL.

University of Arizona.—A library and museum building, $26,000.

University of California.—An appropriation of $250,000 has been made for California Hall, to contain administrative offices and quarters for the departments of history, political science, and economics. The building will be fireproof, being constructed of granite and steel.

An addition to the library for additional bookstacks and for seminar rooms for graduate students, cost $9,781.

Georgia State College of Agriculture and Mechanic Arts.—A new library building, cost $50,000, the gift of Mr. George Foster Peabody, of New York. It contains a fireproof stack room for 100,000 books, offices of librarian and attendant, cataloguing room, reference room, general reading room, and a small lecture room.

A two-story chemical building has been erected. On the first floor are the office, private laboratory, lecture room, and museum of the professor of chemistry, and the quarters of the school of pharmacy; on the second floor, a large beginners' laboratory, smaller laboratories especially designed to meet the needs of advanced students, chemical library, stock rooms, etc. The basement is used for assay work.

University of Idaho.—An armory and gymnasium to cost $25,000 is in course of construction.

University of Illinois.—The new woman's building, cost $80,000, contains a gymnasium 92 by 50 feet, a large swimming tank, lockers, dressing rooms, and baths in the central portion. The north wing is devoted to the department of household economics, and the south wing to the social life of the women students.

Purdue University (Indiana).—A new physics building, brick, 75 by 130 feet, two stories and basement, cost $60,000.

Digitized by Google

Iowa College of Agriculture and Mechanic Arts.—The new main hall, to cost, furnished, $375,000, contains the executive offices and recitation rooms, and offices for the departments of mathematics, language and literature, public speaking, history, economic science, civics, and botany.

Alumni Hall, for the Young Men's Christian Association and the Young Women's Christian Association, cost $50,000.

Kansas State Agricultural College.—The new auditorium is 113 by 125 feet and has a seating capacity of 3,000, cost $40,000.

A new water plant with tank holding 100,000 gallons, cost $10,000.

Maryland Agricultural College.—Completed a new dormitory, a heating plant, water supply, and an electric plant.

University of Minnesota.—A new dormitory for the college of agriculture, cost $40,000.

University of Nebraska.—Physics building, brick, for the department of physics and United States Weather Bureau, cost $75,000.

Administration building, brick, containing the various administration offices and rooms for meetings of the board of regents and of the faculty, cost $35,000.

New Mexico College of Agriculture and Mechanic Arts.—An addition to the girls' dormitory, 34 by 70 feet, constructed of bricks, with stone foundation and trimmings, contains 20 rooms and accommodates 32 students, cost $7,183.

Pennsylvania State College.—A new library building, the gift of Mr. Andrew Carnegie, cost $150,000.

A new track house, costing $10,000, provides rooms for general athletic purposes, together with dormitory accommodations for the members of the various college athletic teams.

Two temporary dormitories have been built to provide for the overflow of students.

South Dakota Agricultural College.—Ammunition house, cost $200.

Virginia Agricultural and Mechanical College and Polytechnic Institute.—Administration building, constructed of stone, contains 10 offices and fireproof vault, cost $6,000.

A two-story brick building, 80 by 40 feet. The lower floor is used as a steam laundry and the upper floor for the tailoring department.

Washington Agricultural College and School of Science.—Hospital for students, cost $1,900.

Agricultural and Mechanical College for Negroes (Alabama).—Erected a frame building for laundry purposes at a cost of $1,000. Library building, the gift of Mr. Andrew Carnegie, cost $10,000.

COURSES OF STUDY.

The title "agricultural and mechanical colleges," by which these institutions are popularly designated, is very misleading, as from it the impression is frequently obtained that the institutions give instruction in agriculture and the mechanic arts only. The act of Congress of July 2, 1862, establishing the institutions is very liberal in its terms. While it provides that the leading object shall be to teach such branches of learning as are related to agriculture and the mechanic arts, and including military tactics, these subjects are to be taught without excluding other scientific and classical studies, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life. The manner in which the instruction shall be given is left by the act to the several State legislatures.

Under these liberal terms it is but natural that the scope of the instruction offered differs widely in the several States. In some of the States the instruction is limited very strictly to agriculture and engineering and the subjects related thereto, while in others, as in some of the State universities, the courses of study are very diverse. New courses are being added constantly, and generous provision for instruction in short agricultural courses has been made for persons who are not able to spend four years in college, and for men who are engaged in actual farm and dairy work and who are able to spare only a few weeks from their work for study and practical work at the institutions during the winter months. These courses have proved of great benefit and the number is being rapidly increased.

The courses of study offered by the several institutions are as follows:

Digitized by Google

ALABAMA POLYTECHNIC INSTITUTE.

Undergraduate courses of four years (B. S.).—Chemistry and agriculture; civil engineering; electrical and mechanical engineering; mining engineering; general course; pharmacy; chemistry and metallurgy.
Short course.—Agriculture (1 year); agriculture (2 years); mechanic arts (2 years); pharmacy (2 or 3 years).
Other courses.—Graduate.

AGRICULTURAL AND MECHANICAL COLLEGE FOR NEGROES (ALABAMA).

English primary course (3 years); preparatory (3 years); normal (4 years); agriculture (B. A. S., 4 years); mechanical (B. M. S., 4 years); scientific-literary (B. S., 4 years).
Industrial courses.—Carpentry (3 years); agriculture (3 years); ironworking (3 years); shoemaking (3 years); broom making (1 year); chair bottoming (1 year); tailoring (2 years); nurse training (2 years); sewing (3 years); millinery (1 year); cooking (2 years); laundry (2 years); printing (3 years); machine shop (4 years); shorthand (1 year).

UNIVERSITY OF ARIZONA.

Undergraduate courses of four years.—Literary (Ph. B.); scientific (B. S.); engineering (B. S.); mining (B. S.); agriculture (B. S.); chemistry (B. S.).
Short course.—Assaying (2 years).
Other courses.—Graduate; preparatory (4 years).

UNIVERSITY OF ARKANSAS.

Undergraduate courses of four years.—Liberal culture courses (A. B. or B. S.); mechanical engineering (B. M. E.); civil engineering (B. C. E.); electrical engineering (B. E. E.); mining engineering (B. Mi. E.); chemical engineering (B. Ch. E.); agriculture (B. S.); horticulture (B. S.); chemistry (B. S. C.).
Short courses.—Mechanic arts (2 or 3 years); electrical engineering (2 years).
Other courses.—Normal (4 years, L. I.); graduate; preparatory (2 years); music; art; law; medicine.

BRANCH NORMAL COLLEGE (ARKANSAS).

Preparatory course (3 years); normal (4 years, L. I.); classical (6 years, A. B.); mechanic arts (4 years); manual training (4 years); sewing; typewriting and stenography.

UNIVERSITY OF CALIFORNIA.

Undergraduate courses of four years.—Letters (A. B.); social science (B. L.); natural sciences (B. S.); commerce (B. S.); agriculture (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); mining engineering (B. S.); railroad engineering (B. S.); sanitary engineering (B. S.); irrigation engineering (B. S.); chemistry (B. S.); sugar technology (B. S.); architecture (B. S.).
Short courses.—Agriculture (2 years); agriculture and horticulture (10 weeks); animal industry and dairying (10 weeks).
Other courses.—Pharmacy (2 years, Ph. G.); graduate; law; medicine; postgraduate medicine; dental; Lick astronomical department; Mark Hopkins Institute of Art.

COLORADO AGRICULTURAL COLLEGE.

Undergraduate courses of four years (B. S.).—Agriculture; mechanical engineering; civil and irrigation engineering; electrical engineering; general and domestic science; architecture; veterinary science.
Short course.—Agriculture.
Other courses.—Commercial (2 years); subfreshman (2 years).

CONNECTICUT AGRICULTURAL COLLEGE.

Undergraduate courses of four years (B. S.).—Agriculture; general science; domestic science.
Four-year courses (secondary).—Agriculture; domestic science.

Digitized by Google

Short courses.—Agriculture (2 years for graduates of high schools); agriculture (2 years for men 17 years of age or over who have not had a high school education); rural school teaching (2 years); mechanic arts, surveying, or drafting (2 years); domestic science (2 years); business (2 years); farm dairy (12 weeks); creamery (12 weeks); pomology (12 weeks); poultry (6 weeks); forestry (12 weeks); business (12 weeks); also 33 ten-day courses arranged in groups, beginning in January and ending in March.

DELAWARE COLLEGE.

Undergraduate courses of four years.—Classical (A. B.); Latin-scientific (A. B.); agriculture (B. S.); general science (B. S.); civil engineering (B. C. E.); mechanical engineering (B. M. E.); electrical engineering (B. E. E.).
Short courses.—Agriculture (1 or 2 years); agriculture (10 weeks, winter).
Other courses.—Graduate.

STATE COLLEGE FOR COLORED STUDENTS (DELAWARE).

Undergraduate courses of four years.—Classical (A. B.); scientific (B. S.); agriculture (B. Agr.); engineering (B. E.).
Industrial courses (2 years).—Woodworking; ironworking; blacksmithing; masonry; printing; cooking; sewing; dressmaking.
Other courses.—Normal (3 years); preparatory (2 years).

UNIVERSITY OF FLORIDA.

Undergraduate courses of four years.—Classical (A. B.); agriculture (B. S.); chemistry (B. S.); civil engineering (B. S.); mechanical engineering (B. S.); Latin-scientific (B. S.); general science (B. S.).
Short courses.—Mechanic arts (2 years); agriculture (10 weeks); horticulture (10 weeks).
Other courses.—Commercial (1 year); stenography and typewriting (1 year); preparatory (2 years).

FLORIDA STATE NORMAL AND INDUSTRIAL SCHOOL FOR COLORED STUDENTS.

Preparatory (2 years); normal (4 years); music.
Industrial courses.—Agriculture; dairying; sewing; cooking; laundry; millinery; nursing; printing; carpentry; painting; blacksmithing and wheelwrighting; tailoring.

GEORGIA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years (B. S.).—General science; agriculture; civil engineering; electrical engineering.
Short courses.—Agriculture (1 year); agriculture (12 weeks); agriculture (2 weeks).
Other courses.—Graduate.

GEORGIA STATE INDUSTRIAL COLLEGE FOR COLORED YOUTHS.

Preparatory (3 years); normal (3 years); collegiate (4 years, A. B.).
Industrial courses (three years each).—Agriculture; carpentry; blacksmithing; masonry; painting; tailoring; shoemaking; sewing.
Short course.—Dairying (2 months).

UNIVERSITY OF IDAHO.

Undergradua'e courses of four years.—Classical (A. B.); scientific (B. S.); agriculture and horticulture (B. S.); mechanical and electrical engineering (B. E. E.); civil engineering (B. C. E.); mining engineering (B. E. M.).
Short courses.—Agriculture and horticulture (3 years); farm dairying and horticulture (4 to 6 weeks, winter).
Other courses.—Preparatory (3 years); music (4 years, B. M.).

UNIVERSITY OF ILLINOIS.

Undergraduate courses of four years.—General courses allowing a wide range of electives (A. B.); classical (A. B.); English (A. B.); German and Romanic languages (A. B.); Latin and modern languages (A. B.); philosophy (A. B.); political science (A. B.); commerce and industry (A. B.); architecture (B. S.); architectural engineering (B. S.); civil

Digitized by Google

engineering (B. S.); electrical engineering (B. S.); mechanical engineering (B. S.); railway engineering (B. S.); municipal and sanitary engineering (B. S.); chemistry (B. S.); chemical engineering (B. S.); physics (B. S.); general science (B. S.); household science (B. S.); mathematics (B. S.); premedical (B. S.); agriculture (B. S.); library science (B. L. S.).

Other courses.—Preparatory; graduate; music; law; medicine; dentistry; pharmacy.

PURDUE UNIVERSITY (INDIANA).

Undergraduate courses of four years (B. S.).—Mechanical engineering; civil engineering; sanitary engineering; electrical engineering; telephonic engineering; agriculture; general science; biology; chemistry; physics; industrial art; sanitary science; premedical; pharmacy.

Short courses.—Agriculture (2 years); agriculture (10 weeks); horticulture (10 weeks); dairying (10 weeks); animal husbandry (10 weeks); pharmacy (2 years of 27 weeks each, Ph. G.).

Other courses.—Graduate.

IOWA COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years.—Agronomy (B. S. A.); dairying (B. S. A.); animal husbandry (B. S. A.); horticulture (B. S. A.); science and agriculture; mechanical engineering (B. M. E.); civil engineering (B. C. E.); electrical engineering (B. S.); mining engineering (B. S.); science as related to industries (B. S.); general and domestic science (B. S.); domestic science (B. D. S.).

Short courses.—Dairying (1 year); dairying (16 weeks. January); dairying (2 weeks, January); corn judging (2 weeks, January); stock judging (2 weeks, January); mining engineering (2 years); ceramics (2 years).

Other courses.—Graduate; veterinary medicine (4 years, D. V. M.).

KANSAS STATE AGRICULTURAL COLLEGE.

Undergraduate courses of four years (B. S.).—General science; agriculture; domestic science; mechanical engineering; electrical engineering; architecture.

Short courses.—Farm dairying (12 weeks, winter); dairying (12 weeks, winter); farmers' (2 years of 12 weeks each, winter); domestic science (2 years of 12 weeks each, fall). Apprentice courses: Machine shop; blacksmith shop; carpenter shop; foundry; boiler and engine room; printing; dairying.

Other courses.—Graduate; preparatory.

AGRICULTURAL AND MECHANICAL COLLEGE OF KENTUCKY.

Undergraduate courses of four years.—Letters (A. B.); science (B. S.); pedagogy (B. Ped.); mechanical and electrical engineering (B. M. E.); mining engineering (B. E. M.); civil engineering (B. C. E.); agriculture (B. Agr.).

Short courses.—Agriculture (2 years); agriculture (10 weeks, winter).

Other courses.—Graduate; preparatory (2 years).

KENTUCKY NORMAL AND INDUSTRIAL INSTITUTE FOR COLORED PERSONS.

Normal (3 years); normal (4 years of 2 terms each); preparatory (3 years); business (1 year); agriculture (3 years); mechanical (3 years); printing (3 years); domestic science (3 years); sewing (3 years).

LOUISIANA STATE UNIVERSITY.

Undergraduate courses of four years.—Agriculture (B. S.); mechanical engineering (B. S.); civil engineering (B. S.); electrical engineering (B. S.); general science (B. S.); commerce (A. B.); Latin-scientific (A. B.); literary (A. B.).

Short course.—Agriculture (2 years).

Other courses.—Sugar (5 years, B. S.); preparatory (1 year).

SOUTHERN UNIVERSITY (LOUISIANA).

Classical (4 years); scientific (4 years); normal (3 years); high school (4 years); grammar school (3 years); agriculture (4 years); manual training (3 years); tinsmithing (3 years); printing (4 years); bookkeeping (2 years); typewriting (1 year); sewing (4 years); music (5 years).

Digitized by Google

UNIVERSITY OF MAINE.

Undergraduate courses of four years.—Classical (A. B.); Latin-scientific (Ph. B.); scientific (B. S.); chemical (B. S.); agriculture (B. S.); horticulture (B. S.); forestry (B. S.); civil engineering (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); mining engineering (B. S.); pharmacy (B. S.).

Short courses.—Agriculture (1 year); agriculture (2 years); agriculture, dairying, and horticulture (8 weeks, winter); horticulture (3 weeks, spring); poultry management (3 weeks); pharmacy (2 years, Ph. C.).

Other courses.—Graduate; law.

MARYLAND AGRICULTURAL COLLEGE.

Undergraduate courses of four years.—Agriculture (B. S.); mechanical engineering (M. E.); scientific (B. S.).

Short courses.—Agriculture (10 weeks, winter); agriculture (2 years); creamery.

Other course.—Preparatory.

MASSACHUSETTS AGRICULTURAL COLLEGE.

Undergraduate courses of four years (B. S.).—Agriculture; horticulture; biology; chemistry; mathematics; landscape gardening.

Short courses.—Dairy farming (10 weeks); horticulture (10 weeks); bee culture (2 weeks); agriculture for women (2 years).

Other courses.—Graduate.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY.

Undergraduate courses of four years (B. S.).—Civil engineering; mechanical engineering; mining engineering and metallurgy; architecture; architectural engineering; landscape architecture; general science; chemistry; electrical engineering; biology; physics; electrochemistry; chemical engineering; sanitary engineering; geology; naval architecture.

Other courses.—Graduate.

MICHIGAN AGRICULTURAL COLLEGE.

Undergraduate courses of four years (B. S.).—Agriculture; mechanical engineering; forestry; women's course.

Short courses.—Beet-sugar production (24 weeks); cheese making (4 weeks); creamery management (8 weeks); general farming and live stock (8 weeks); fruit culture (8 weeks).

Other courses.—Graduate.

UNIVERSITY OF MINNESOTA.

Undergraduate courses of four years.—General culture courses (A. B.); chemistry (B. S.); civil engineering (C. E.); municipal engineering (C. E.); mechanical engineering (M. E.); electrical engineering (E. E.); science and technology (D. S., and at end of fifth year professional degree); mining engineering (E. M.); metallurgy (Met. E.); agriculture (B. Agr.); forestry (B. Agr.); home economics (B. S.).

Short courses.—Agriculture (secondary, 3 years); agriculture (8 weeks); dairying (4 weeks, winter).

Other courses.—Graduate; law; medicine and surgery; homeopathic medicine and surgery; dentistry; pharmacy.

MISSISSIPPI AGRICULTURAL AND MECHANICAL COLLEGE.

Undergraduate courses of four years (B. S.).—Agriculture; horticulture; dairy husbandry; veterinary science; chemistry; mechanical and electrical engineering; civil engineering; mining engineering; textile.

Short courses.—Agriculture (2 years of 10 weeks each, winter); practical working boy's course in agriculture (1 year); textile (2 years); mechanical and electrical engineering (2 years).

Other courses.—Preparatory; graduate.

ALCORN AGRICULTURAL AND MECHANICAL COLLEGE (MISSISSIPPI).

Undergraduate course of four years (B. S.).—Scientific.

Industrial courses.—Shoemaking (3 years); agriculture (7 years); agriculture (2 years); carpentry (3 years); blacksmithing (3 years); painting (3 years); nursing (3 years); sewing (4 years); domestic science (4 years); laundry.

Digitized by Google

UNIVERSITY OF MISSOURI.[a]

Undergraduate courses of four years.—General culture courses (A. B.); education (B. S.); agriculture (B. S.); civil engineering (B. S.); electrical engineering (B. S.); mechanical engineering (B. S.); sanitary engineering (B. S.); chemical engineering (B. S.); hydraulic engineering (B. S.).

Short courses.—Plant production (8 weeks, winter); dairying (8 weeks, winter); animal husbandry (8 weeks, winter); agriculture and horticulture (summer).

Other courses.—Graduate; law; medicine; pedagogy, elementary and advanced courses.

MISSOURI SCHOOL OF MINES AND METALLURGY.

Undergraduate courses of four years (B. S.).—Mining engineering; civil engineering; chemistry and metallurgy; general science.

Short courses.—Chemistry and assaying (2 years); mining (2 years); electricity (2 years); surveying (2 years).

LINCOLN INSTITUTE (MISSOURI).

College course (4 years, A. B.); preparatory (3 years); normal (4 years); subnormal (3 years); model and training department.

Industrial courses.—Carpentry (3 years); blacksmithing (3 years); machinery (3 years); sewing (3 years); cooking (1 year); laundry (1 year); printing; typewriting; agriculture.

MONTANA COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years.—General science (B. S.); agriculture (B. S. A.); biology (B. S.); analytical and applied chemistry (B. A. C.); domestic science (B. S.); mechanical engineering (B. M. E.); electrical engineering (B. E. E.); civil engineering (B. C. E.).

Short courses.—Secondary course (3 years) in agriculture or domestic science; domestic science (1 year); agriculture (2 years of 18 weeks each, winter); engineering (18 weeks, winter).

Other courses.—Graduate; preparatory (3 years); business (1 year); music; art.

UNIVERSITY OF NEBRASKA.

Undergraduate courses of four years.—General culture (A. B.); general science (B. S.); premedical (B. S.); general agriculture (B. S.); forestry (B. S.); agriculture and chemistry (B. S.); botany and agriculture (B. S.); botany and zoology (B. S.); chemistry and physics (B. S.); horticulture and botany (B. S.); mathematics and physics (B. S.); zoology and philosophy (B. S.); chemistry and domestic science (B. S.); technical agriculture or horticulture (B. S.); civil engineering (B. S.); electrical engineering (B. S.); mechanical engineering (B. S.); chemical engineering (B. S.); mining engineering.

Short courses.—Agriculture (secondary course, 3 years of 24 weeks each); agriculture (9 weeks, winter); dairying (9 weeks, winter); stock and grain judging (1 week); domestic science (2 years); mechanic arts (2 years); physical education (2 years).

Other courses.—Graduate; preparatory; law; medicine; music; art.

NEVADA STATE UNIVERSITY.

Undergraduate courses of four years.—Agriculture (B. S.); domestic arts and science (B. D. S.); liberal arts (A. B.); general science (B. S.); mining and metallurgy (B. S.); civil engineering (B. S.); mechanical engineering (B. S.).

Short courses (January and February).—Agriculture; dairying; domestic arts and science.

Other courses.—Preparatory (3 years); normal.

NEW HAMPSHIRE COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years (B. S.).—Agriculture; agriculture (biological division); agriculture (chemical division); mechanical engineering; electrical engineering; technical chemistry; general course.

Short courses.—Agriculture (2 years); agriculture (10 weeks, winter); dairying (10 weeks, winter).

[a] Not including Missouri School of Mines and Metallurgy.

Digitized by Google

RUTGERS SCIENTIFIC SCHOOL (NEW JERSEY).

Undergraduate courses of four years (*B. S.*).—Agriculture; civil engineering and mechanics; chemistry; electricity; biology; clay working and ceramics.
Short course.—Clay working and ceramics (2 years).

NEW MEXICO COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years (*B. S.*).—General course; agriculture; mechanical engineering; domestic science.
Short courses.—Agriculture (2 years); agriculture and horticulture (12 weeks given in each term of the college year); practical mechanics (2 years).
Other courses.—Graduate; preparatory (5 years); stenography and typewriting (1 year).

CORNELL UNIVERSITY (NEW YORK).

Undergraduate courses of four years.—General culture courses (A. B.); agriculture (B. S. A.); architecture (B. Arch.); civil engineering (C. E.); mechanical engineering (M. E.); electrical engineering (M. E.); marine engineering (M. E.); naval architecture (M. E.); railway mechanical engineering (M. E.).
Short courses.—Agriculture (2 years); agriculture (11 weeks, winter); dairying (11 weeks, winter); nature study (2 years); architecture (2 years).
Other courses.—Graduate; law; medicine; veterinary.

NORTH CAROLINA COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years.—Agriculture (B. Agr.); civil engineering (B. E.); mechanical engineering (B. E.); electrical engineering (B. E.); mining engineering (B. E.); industrial chemistry (B. S.); textile industry (B. E.).
Short courses.—Agriculture (2 years); agriculture and dairying (10 weeks, winter); building and contracting (2 years); road building (January to May); mechanic arts (2 years); textile industry (2 years); courses for rural teachers (2 years; 1 year; summer); courses for city teachers (2 years; 1 year; summer).
Other course.—Graduate.

AGRICULTURAL AND MECHANICAL COLLEGE FOR THE COLORED RACE (NORTH CAROLINA).

Industrial course of 4 years for men.
Short course.—Dairying (6 weeks, winter).

NORTH DAKOTA AGRICULTURAL COLLEGE.

Undergraduate courses of four years (*B. S.*).—General science; agriculture; mechanical; pharmaceutical chemistry.
Short courses.—Agriculture (3 years of 5 months each); agriculture (two courses of 12 weeks each); steam engineering (2 years); pharmacy (2 years); domestic science (2 years); domestic science (12 weeks); teachers' nature study (2 years).
Other course.—Preparatory.

OHIO STATE UNIVERSITY.

Undergraduate courses of four years.—Agriculture (B. S.); horticulture and forestry (B. S.); domestic science (B. S.); general culture (A. B.); civil engineering (C. E.); mining engineering (E. M.); mechanical engineering (M. E.); electrical engineering (M. E.); ceramics (E. M.); manual training (B. S.); industrial arts (B. S.); chemical engineering (B. S.); architecture (C. E.); pharmacy (B. S.).
Short courses.—Agriculture (2 years); dairying (12 weeks, winter); domestic science (2 years); mining (2 years); clay working and ceramics (2 years); industrial arts (2 years); pharmacy (2 years).
Other courses.—Graduate; law; veterinary.

OKLAHOMA AGRICULTURAL AND MECHANICAL COLLEGE.

Undergraduate courses of five years (*B. S.*).—General science; agriculture; mechanical engineering.
Short courses.—Agriculture or domestic economy (2 years of 20 weeks each); agriculture, horticulture, and mechanic arts (8 weeks, winter); printing.
Other course.—Business (1 year).

Digitized by Google

COLORED AGRICULTURAL AND NORMAL UNIVERSITY (OKLAHOMA).

Undergraduate courses of four years.—Classical (A. B.); scientific (B. S.); normal (B. S. D.); civil architecture (M. E.); electrical and mechanical engineering (M. E.); agriculture (B. S. A.).

Other courses.—Elementary (4 years); preparatory (3 years).

OREGON STATE AGRICULTURAL COLLEGE.

Undergraduate courses of four years (*B. S.*).—Agriculture; household science; mechanical engineering; electrical engineering; pharmacy; mining engineering; literary commerce.

Short courses.—Mining (2 years); agriculture (10 days, winter); dairying (8 weeks, winter).

Other courses.—Preparatory (1 year); business (2 years); music; commerce (2 years).

PENNSYLVANIA STATE COLLEGE.

Undergraduate courses of four years.—General science (B. S.); classical (A. B.); Latin-scientific (B. S.); philosophy (B. S.); modern languages and literature (B. L.); agriculture (B. S.); biology (B. S.); chemistry (B. S.); industrial chemistry (B. S.); civil engineering (B. S.); electrical engineering (B. S.); mathematics (B. S.); mechanical engineering (B. S.); mining engineering (B. S.); physics (B. S.).

Short courses.—Agriculture (12 weeks, winter); creamery (8 weeks, winter); chemistry (2 years); mechanic arts (2 years); mining (2 years).

Other courses.—Preparatory (1 year); graduate; correspondence courses in agriculture.

RHODE ISLAND COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years (*B. S.*).—General science; agriculture; mechanical engineering; electrical engineering; highway engineering; chemistry; biology.

Short courses.—Agricultural high school (2 years); farm mechanics (12 weeks, winter); farm practice (6 weeks); poultry (6 weeks). Industrial courses of 2 years: Carpentry; drafting; machine shop; steam engineering.

Other course.—Preparatory (2 years).

CLEMSON AGRICULTURAL COLLEGE (SOUTH CAROLINA).

Undergraduate courses of four years (*B. S.*).—Agriculture; agriculture and animal industry; mechanical and electrical engineering; civil engineering; metallurgy and geology; textile industry.

Short course.—Textile (2 years).

Other course.—Preparatory (1 year).

COLORED NORMAL, INDUSTRIAL, AGRICULTURAL, AND MECHANICAL COLLEGE (SOUTH CAROLINA).

Undergraduate courses of four years.—General college course (A. B.); agriculture (B. Agr.); mechanical (B. S.).

Industrial courses.—Sewing; cooking; carpentry and woodwork; bricklaying and plastering; architecture; mechanical drawing and painting; ironworking and machinery; housekeeping; farming; upholstering and cabinetmaking; saddlery; harness making and shoemaking; sawmilling and manufacture of hard and soft lumber; typewriting; tailoring.

Other courses.—Preparatory and normal (5 years); model school (5 grades); art; music.

SOUTH DAKOTA AGRICULTURAL COLLEGE.

Undergraduate courses of four years.—Scientific agriculture (B. Agr.); horticulture (B. S.); domestic science (B. S.); general science (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); agricultural engineering (B. S.); pharmacy (B. S.).

Short courses.—Agriculture (2 years); agriculture (6 weeks, winter); butter making (12 weeks, winter); domestic dairying (12 weeks, fall); cheese making (12 weeks, spring); horticulture (12 weeks, winter); steam engineering (24 weeks); domestic science (12 weeks, winter); pharmacy (2 years, Ph. G.).

Other courses.—Preparatory; music; art; business (1 year); amanuensis (1 year).

Digitized by Google

UNIVERSITY OF TENNESSEE.

Undergraduate courses of four years.—Agriculture (B. S.); civil engineering (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); chemistry and metallurgy (B. S.); pharmacy (B. S.); literary (A. B.).

Short courses.—Agriculture, animal husbandry, dairying, and horticulture (10 weeks, winter); pharmacy (2 years, Ph. C.).

Industrial department for colored students.—Agriculture; carpentry; printing; sewing; cooking; electricity; brickmaking; baking; mechanical.

Other courses.—Graduate; law; medicine; dentistry.

AGRICULTURAL AND MECHANICAL COLLEGE OF TEXAS.

Undergraduate courses of four years (B. S.).—Agriculture (farm husbandry); agriculture (plant husbandry); agriculture (animal husbandry and dairy husbandry); mechanical engineering; civil engineering; textile engineering; electrical engineering.

Short courses.—Agriculture (10 weeks, winter); textile (2 years); manual training (8 weeks).

Other course.—Graduate.

PRAIRIE VIEW STATE NORMAL AND INDUSTRIAL COLLEGE (TEXAS).

College course (6 years, A. B.) with instruction in practical industries: Agriculture; dairy husbandry; horticulture; broom making; mattress making; butchering; woodworking; ironwork; shoemaking; tailoring; sewing; millinery; cooking; laundry; music.

AGRICULTURAL COLLEGE OF UTAH.

Undergraduate courses of four years (B. S.).—Agriculture; mechanical engineering; civil engineering; domestic science; commerce; general science.

Short courses.—Agriculture (3 years); domestic science (3 years); commerce (3 years); agriculture (4 weeks, winter); domestic arts (12 weeks, winter); mechanic arts (12 weeks).

Other courses.—Preparatory (2 years); manual training in domestic arts (4 years); manual training in mechanic arts (4 years); engineering preparatory (2 years).

UNIVERSITY OF VERMONT AND STATE AGRICULTURAL COLLEGE.

Undergraduate courses of four years.—Classical (A. B.); literary-scientific (Ph. B.); civil engineering (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); chemistry (B. S.); agriculture (B. S.); commerce and economics (B. S.).

Short courses.—Agriculture (1 or 2 years).

Other course.—Medicine.

VIRGINIA AGRICULTURAL AND MECHANICAL COLLEGE AND POLYTECHNIC INSTITUTE.

Undergraduate courses of four years (B. S.).—Agriculture; horticulture; applied chemistry; course preparatory for medicine or veterinary science; general science; civil engineering; mechanical engineering; electrical engineering.

Short courses.—Practical agriculture (2 years); practical mechanics (2 years).

Other courses.—Graduate.

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE (VIRGINIA).

Academic course (3 years); normal (2 years); physics (3 years); agriculture (3 years); agriculture (1 year); horticulture (1 year); dairying (1 year); business (1 year).

Trade courses (three years).—Carpentry; painting; bricklaying and plastering; house building; wheelwrighting; blacksmithing; machinist; steam engineering; harness making and carriage trimming; shoemaking; tailoring; cabinetmaking; tinsmithing; printing; upholstering.

WASHINGTON AGRICULTURAL COLLEGE AND SCHOOL OF SCIENCE.

Undergraduate courses of four years.—Mathematics and civil engineering; chemistry; botany; zoology; agriculture; horticulture; English language and literature; economic science and history; mechanical engineering; electrical engineering; modern languages; mining engineering; geology.

Digitized by Google

Short courses.—Agriculture (3 years, secondary); dairying (8 weeks); horticulture (4 weeks, winter); artisans (1 year).

Other courses.—Pharmacy (2 years, Ph. G.); veterinary (3 years, D. V. S.); business (2 years); stenography and typewriting (2 years); telegraphy (1 year); preparatory (3 years); music; art.

WEST VIRGINIA UNIVERSITY.

Undergraduate courses of four years.—General culture (A. B.); pharmacy (B. S.); civil and mining engineering (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); agriculture (B. S.).

Short courses.—Agriculture (2 years); agriculture (1 year); agriculture (12 weeks, winter); animal industry (12 weeks, winter); horticulture (12 weeks, winter); poultry industry (12 weeks); dairying (12 weeks); farmers' course (4 weeks, winter); manual training; mechanic arts.

Other courses.—Graduate; law; medicine; fine arts; music; business (2 years); preparatory (4 years).

WEST VIRGINIA COLORED INSTITUTE.

Preparatory (1 year); normal (4 years); agriculture (4 years).

Industrial courses.—Carpentry (4 years); machinery woodworking (4 years); blacksmithing (4 years); brickmasonry and plastering (3 years); wheelwrighting (4 years); steamfitting and plumbing; sewing (3 years); dressmaking (2 years); millinery (2 years); cooking (3 years); printing (4 years); music.

UNIVERSITY OF WISCONSIN.

Undergraduate courses of four years.—General culture courses (A. B.); pre-medical (B. S.); pre-engineering (B. S.); commerce (A. B.); pharmacy (B. S.); civil engineering (B. S.); sanitary engineering (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); applied electro-chemistry (B. S.); general engineering (B. S.); pre-mining engineering (B. S.); agriculture (B. S.).

Short courses.—Agriculture (2 years of 14 weeks each, winter); dairying (12 weeks, winter); dairying (summer); pharmacy (2 or 3 years, Ph. G.); philosophical course for normal school graduates (2 years, Ph. B.).

Other courses.—Graduate; law; music.

UNIVERSITY OF WYOMING.

Undergraduate courses of four years.—Classical (A. B.); literary (A. B.); scientific (A. B. or B. S.); agriculture (B. S.); mechanical engineering (B. S.); mining engineering (B. S.); irrigation engineering (B. S.); normal (B. Ped.).

Short courses.—Agriculture (2 years); agriculture (1 year); mining (6 weeks, winter).

Other courses.—Preparatory (3 years); graduate; business (2 years); stenography (2 years); music.

CHAPTER XXVII.

PROFESSIONAL EDUCATION.

INCLUDING EXTRACTS FROM THE REPORTS OF THE MOSELY COMMISSION, AND LEGAL REQUIREMENTS FOR THE PRACTICE OF MEDICINE AND DENTISTRY.

CONTENTS: General statistical survey—Benefactions and other items from the reports—The law course at Yale University—Five years for A. B. and LL. B. degrees—National conference of law examiners—Recent laws for the establishment of boards of examiners in law—Extracts from the reports of the Mosely Educational Commission—Requirements for the practice of medicine—Requirements for the practice of dentistry—Statistical tables.

The number of theological schools in 1903–4 was 153, the same as in the previous year; the number of students was 7,392, just 20 more than in the previous year. The number of students completing the course was 1,620, or 22 per cent.

In the 95 law schools were enrolled 14,306 students, 249 more than in the previous year. Ten years ago there were more students in theology than in law; now there are nearly twice as many in law as in theology. The increase in the number of admissions to the bar, however, is probably not so great as these figures would seem to indicate. Many States in the last few years have established regulations requiring formal, written examinations for admission to the bar. It has been found, as shown by full records in New York State, that graduates of law schools can much more easily pass the examinations than students who have studied only in the offices of attorneys.

In the 152 medical schools there were 26,949 students, a decrease of 113 since the year preceding. The number graduated was 5,702.

In the 54 dental schools there were 7,325 students, a decrease of 973 since the preceding year. The year 1903–4 was the first one in which the requirement of a four-years' course in dentistry came into effect, and as the result was unsatisfactory the schools voted in July, 1904, to return to a course of three years. The large decrease in the number of students can not be satisfactorily explained in any other way than by the lengthened course of study, for upon a comparison of the table with that of the preceding year it will be found that more than two-thirds of the schools, situated in all sections of the country, showed a falling off in the number of students.

Many of the dental schools made their reports to this office in 1904 previous to the meeting of the National Association of Dental Faculties in July, when the resolution was adopted to return to a course of three years of thirty weeks each. Such schools reported the course of study to be four years, but the schools which did not send in their reports until after the July meeting gave the course as three years. As it was understood that all the schools would abide by the action of the July meeting, it was deemed best to omit the statements as to length of course in the statistical table.

The 63 schools of pharmacy enrolled 4,457 students, or 46 more than in the preceding year. The number graduated was 1,308.

The 11 veterinary schools enrolled 795 students, 124 more than in the year preceding.

In respect to value of grounds and buildings of professional schools and their endowment, the figures given must necessarily be regarded as very imperfect, for in

Digitized by Google

many instances professional schools are departments of universities and have no separate grounds or funds. This is the case in several of the largest schools, and in State universities generally. Several of the most important schools are not included in the summary of these items, but the value of the grounds and buildings of the theological schools reported amounts to over $14,000,000, of medical schools to about $14,000,000 also, and of law schools to about $2,500,000.

The endowment funds of the theological schools amount to over $21,000,000. While a few medical and a few law schools report some endowment funds, these schools and dental and pharmaceutical schools still have to depend mainly on the fees of students for support.

In the libraries of theological schools 1,534,486 volumes are reported, in law libraries nearly 500,000, and in medical libraries 200,000.

The ratio of graduates to students was smaller in medicine than in any of the other classes, viz, 21 per cent. In dentistry it was highest, 30 per cent; in theology it was 22 per cent, in law 23 per cent, and in pharmacy 29 per cent.

Theological schools report benefactions during the year amounting to over $1,000,000, and medical schools to nearly $400,000. The veterinary school of the University of Pennsylvania reports the donation to it of $100,000 by a person whose name is withheld. In addition to the benefactions above noticed, which were reported by the institutions themselves, information has recently been received of two notable benefactions to theological schools.

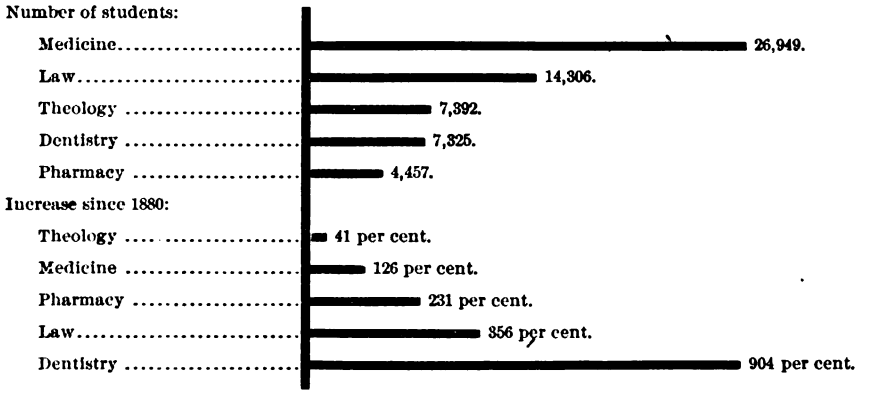

TABLE 1.—*General summary of statistics of professional schools for 1903–4.*

Class.	Schools.	Instructors.	Students.	Increase (+) or decrease (−).	Graduated in 1904.	Per cent graduated.	Students having literary degree.[a]

BENEFACTIONS AND OTHER ITEMS FROM THE REPORTS.

Talladega College, Alabama.—A library building in connection with the college and theological department is in process of erection; cost, $18,000.

McCormick Theological Seminary, Chicago, Ill.—Mrs. Nettie F. McCormick donated $22,300; Stanley McCormick, $5,000.

Concordia Seminary, Springfield, Ill.—A new heating plant erected at a cost of $14,000.

Drake University, Des Moines, Iowa.—Funds to the amount of $16,000 have been raised toward the construction of a $25,000 building for this college.

Presbyterian Theological Seminary, Louisville, Ky.—James R. Barret, esq., Henderson, Ky., gave $25,000 for new library building, to be erected in the summer of 1904. A new dormitory and refectory, costing $40,000, was completed in 1904.

Southern Baptist Theological Seminary, Louisville, Ky.—Hon. E. Nelson Blake, Arlington, Mass., gave $5,000.

Tufts College, Massachusetts.—By coordination of subjects a divinity student can secure the A. B. degree in four years, and the B. D. degree in one year more.

St. Paul Seminary, Minnesota.—A chapel was erected in 1903 at a cost of $60,000.

Auburn Theological Seminary, New York.—Received for permanent endowment, $57,200; of this amount $10,000 was contributed by Miss Caroline Willard, Auburn, N. Y., and $5,000 each by Mrs. Julia P. Osborne and Mrs. Flora Ward Fay, of Auburn, N. Y. Hon. H. B. Silliman, LL. D., of New York, gave $5,000 toward purchase of a $10,000 clubhouse for use of seminary students.

General Theological Seminary, New York, N. Y.—Legacy of $95,000 received from the late dean, Eugene A. Hoffman; $37,838 received from the alumni, and $7,500 from the late A. G. P. Dodge. The three new dormitory buildings were opened and used for the first time at the opening of the seminary in September, 1903.

Jewish Theological Seminary, New York, N. Y.—Seventy thousand dollars was received as part of an endowment fund; this is the second installment. It is to be paid in five installments, and $210,000 is still due. The institution occupies a new fireproof building, 531–535 West Twenty-third street.

Northwestern University, Law School, Chicago, Ill., reports $7,000 received from Elbert H. Gary, of New York, N. Y.

University of Kansas, Law School, Lawrence, Kans.—A new building, to cost $50,000, is being constructed, to be used by the law school exclusively.

Digitized by Google

University of Minnesota, College of Law, Minneapolis.—An addition, costing $35,000, has been made to the law school building.

University of North Carolina, Law School, Chapel Hill.—Two new buildings are in process of erection, a gymnasium and a Y. M. C. A. building.

Ohio State University, College of Law, Columbus.—A new law building (Page Hall) was erected in 1902, at a cost substantially of $100,000.

Rochester Theological Seminary, New York, reports $93,000 received. Byron J. Huntley, Batavia, N. Y., A. J. Fox (deceased), Detroit, Mich., and John D. Rockefeller, New York, are mentioned as contributors.

Wittenberg Theological Seminary, Springfield, Ohio, reports $100,000 received. The estate of Rev. Charles Stroud, Springfield, Ohio, is mentioned as benefactor.

Meadville Theological School, Meadville, Pa.—Hunnewell Hall, for refectory and gymnasium, was finished in March, 1904, at a cost of $30,000, the gift of the late Mr. H. H. Hunnewell, of Wellesley, Mass., and others.

Lutheran Theological Seminary, Philadelphia, Pa.—The Schaeffer-Ashmead Memorial Church was erected in 1902–3 by Rev. Wm. Ashmead Schaeffer, D. D., as a memorial to his parents, the late Rev. Charles Wm. Schaeffer, D. D., LL. D. (professor in the seminary, 1864–1896), and Mrs. Elizabeth Fry Ashmead Schaeffer.

Susquehanna University, School of Theology, Philadelphia, Pa., reports a bequest of $17,000 from Rev. R. Hill, D. D., of Philadelphia, Pa.

University of Southern California, College of Medicine, Los Angeles.—A clinical laboratory to cost $20,000 is in process of construction.

Cooper Medical College, San Francisco, Cal.—Mrs. L. C. Lane bequeathed to the college one-third of her estate—estimated at $150,000—to endow a Lane memorial medical library, for use of college students and practitioners in general.

Denver and Gross College of Medicine, Denver, Colo.—A new laboratory building has been constructed.

Georgetown University, School of Medicine, Washington, D. C.—An addition to the university hospital was completed, increasing the capacity to 100 beds. A spacious operating amphitheater was completed, the gift of a private benefactor.

Drake University, College of Medicine, Des Moines, Iowa.—A new building completed during the year at a cost of $20,000.

State University of Iowa, College of Medicine, Iowa City.—During the last year the university has built for the use of the college of medicine an anatomical building and a laboratory building; estimated cost of buildings and equipment, $175,000.

University of Maryland, School of Medicine, Baltimore.—A new laboratory building has been completed, ready for occupancy during the session of 1904–5; total cost, inclusive of installation of electric plant, $60,000.

Grand Rapids Medical College, Michigan.—A new building, at a cost of $20,000, opened in October, 1903.

University and Bellevue Hospital Medical College, New York, N. Y.—New 6-story addition now under construction.

Wake Forest College, Medical Department, North Carolina.—Alumni Hall, which is to be used by the school of medicine, is being erected at a cost of $21,000.

University of Texas, Medical Department, Galveston, reports $7,500 received from Hon. George W. Brackenridge, of San Antonio.

Gate City Medical College, Texarkana, Tex.—A large brick building has been recently bought for the use of the college, at a cost of $23,500.

Birmingham Dental College, Alabama.—This institution now owns its buildings, valued at $10,000.

Southern Dental College, Atlanta, Ga.—Just completing additions and equipment to amount of $8,000.

University of Maryland, Dental School, Baltimore.—New building just completed at a cost of $50,000, four stories high, containing lecture hall, infirmary, four laborato-

Digitized by Google

ries for dental work, and eight laboratories for work in bacteriology, histology, pathology, and chemistry.

Washington University, Dental Department, St. Louis, Mo.—Will move into our new buildings on the World's Fair grounds in 1905.

University of Pennsylvania, Veterinary School, Philadelphia.—This year (1904) the school has received a gift of $100,000 from an individual whose name is not to be made known.

Minimum admission requirements of the American Medical College Association.—The Association of American Medical Colleges, at its meeting in Chicago, April, 1905, adopted as the minimum requirement for admission to medical colleges a high school course of four full years.

Higher admission requirements of Rush Medical College of the University of Chicago.—President Harper says:

Medical students entering the university in 1904–5 are expected in every case to have completed at least the first two years of the regular college curriculum. Rush Medical College, including its first two years as conducted in the University of Chicago, now stands as one of four institutions in the United States which require more than a high school training for admission.

THE LAW COURSE AT YALE UNIVERSITY.

[From the report for 1903–4 of Dean Henry Wade Rogers.]

In 1900–1901 seniors in Yale College were for the first time allowed to elect studies in law to be pursued in the law school and credited toward the bachelor-of-arts degree. But the amount of credit they could thus obtain was limited to five hours. This arrangement was not at all satisfactory to the law faculty, and in 1902–3 a formal memorial on the subject was presented by this faculty to the academic faculty. The only result this accomplished was the addition of another hour of law study, which could be credited on the arts degree. It has been very generally conceded that in the United States young men who enter the professions, having first received a college training, begin the actual practice of their professions too late in life. There has been a growing conviction among thoughtful educators that it ought to be possible to obtain the degree in arts and that in law in six years. The law faculty shared in that conviction, and were anxious for such an adjustment of the work of the two faculties as would allow this to be done. They therefore permitted students who had graduated from Yale College, and who had taken while in college the five or six hours of law study, to complete the law school course in two years by carrying extra work; but it was found impossible for any one not extraordinarily gifted to crowd sixty hours a week of college work and forty-five hours a week of law school work into six years, and do the work as it should be done. The two faculties at length came to a recognition of this fact, and were at the same time ready to concede that law is intrinsically a "culture" study, and that the recognition of it as such would accord with the academic practice of the English universities and many of the most reputable of American universities. It was finally agreed that students in Yale College might elect fourteen hours of law school work and have the same credited on the bachelor-of-arts degree—three hours in the junior year and eleven hours in the senior year.

FIVE YEARS FOR A. B. AND LL. B. DEGREES.

[From the Indiana University Bulletin for 1905.]

With the beginning of the academic year 1904–5 a new course was introduced, leading to the degree of A. B. at the end of four years, with law as the major subject. The course contemplates the completion of two full years of academic work before the commencement of the law studies. During the junior and senior years the course embraces ten hours of law and five hours of academic work for each week. The

Digitized by Google

A. B. degree with law as major will admit the holder to the third-year class of the school of law, which he is thus enabled to complete in another year. A student may in this way complete both the A. B. and the LL. B. courses in a period of five years.

NATIONAL CONFERENCE OF LAW EXAMINERS.[a]

"One of the most important meetings held at St. Louis last fall in connection with the sessions of the American Bar Association was the conference of State boards of law examiners. The meeting, which was attended by a large number of bar examiners, legal educators, and lawyers, was called for the purpose of organizing a national association of State boards of law examiners. Hon. L. J. Nash, of the Wisconsin board of bar examiners, was elected chairman of the meeting, and Mr. Lucius H. Perkins, of the Kansas board, was chosen secretary."

Mr. Perkins read a paper on "The State Board—A Landmark in Lawyer-making," from which the following is taken:

"The Kansas board was created in July, 1903. It immediately organized and began serious preparation for work. We opened correspondence with all the States and Territories, addressing the secretaries of the boards or the attorneys-general. We thus got into communication with all the State boards, and where there were none we learned the methods of examination. We did not want to begin where others had begun and make anew all the mistakes which they had made, but we determined to draw from the universal experience and make a close study of the science, and, if possible, bring our State up to the highest standard thus far attained. We soon found that the States fall into three general classes:

"(1) Those that have State boards of law examiners.

"(2) Those that have no board, but have some special methods of examination.

"(3) Those that still adhere to the obsolete and ridiculous methods that have tended to take the law out of the category of the learned professions, and justify the adage that he is an honest lawyer who has hair on his teeth.

"The following States and Territories have boards of examiners: Connecticut, Colorado, Georgia, Illinois, Iowa, Kansas, Louisiana, Maine, Minnesota, Massachusetts, Michigan, Maryland, [Missouri], New Jersey, Nebraska, New Hampshire, New York, Ohio, Oklahoma, Pennsylvania, Rhode Island, Tennessee, Texas, Vermont, [Washington], Wisconsin, and Wyoming.

"In all save Texas the whole matter is delegated to one State board, varying from three to fifteen members, with an average of about five. In Texas there are five separate boards, in different districts, all acting independently, but under stringent rules of the supreme court.

"The second division includes at least nine: Alabama, Delaware, Montana, Nevada, North Dakota, North Carolina, South Dakota, Virginia, and West Virginia. They have no State boards, but are trying to accomplish the same results. In some of them the supreme court sits as a board of examiners, and has regular rules and practically does the same work as is done by the boards. In West Virginia all applicants are examined by the law faculty of the university.

"Thus, the movement to bring the bar up to a standard of respectability in morals and scholarship may now be said to include 34 [36] States and Territories, and the leaven is in the whole lump.

"The methods adopted by the Kansas board are in accord with the most advanced thought and the most successful experience in this work." "Our requirements of preliminary education are equal to a four years' course in a standard high school. No diploma, ipso facto, admits the applicant to the examination. We reserve the

[a] American Law School Review, May, 1905.

Digitized by Google

right to determine what schools shall be accredited, and a diploma from a law school does not excuse the applicant from the preliminary examination unless its standard of admission is up to the standard of the board. All applicants are examined. Graduates from our own or any other university or law school are not exempt; but at the last session of the board a rule was passed providing that all applicants who have been admitted to the highest courts of another jurisdiction, and actually practiced for more than three years immediately preceding their application, may be separated into a class by themselves and examined, in the discretion of the board. There were seven such in our last examination.

"All other examinations are in writing. We propound eighty problems, divided into four sessions of three hours each. We require a few definitions and ask a few categorical questions, but by far the greater number are hypothetical and are intended to raise the ordinary questions that might be put to a lawyer any day. We ask no catch questions or any of extraordinary difficulty. Our aim is to test the applicant's mental caliber as well as his knowledge of the law, and we give good credit for a brainy answer, even though the solution be wrong."

RECENT LAWS FOR ESTABLISHMENT OF BOARDS OF EXAMINERS IN LAW.

Maine.—A board of examiners composed of five attorneys shall be appointed by the governor, on the recommendation of the chief justice of the supreme judicial court, for the examination of applicants for admission to the bar. Applicants must submit evidence of "having pursued the study of the law in the office of some attorney, or in some recognized law school or university for at least three years prior to such examination; and a fee to be fixed by said board of not more than $20 shall accompany the application. The applicant shall be required to submit to a written examination which shall be prepared by said board, also to an oral examination by the board, if deemed necessary, and shall be required to answer correctly a minimum of 70 per cent of the questions given him to entitle him to the certificate of the board. The board shall, however, have power to establish such higher grades of standing as to them may seem proper." (Sec. 3, chap. 133, Public Laws of 1899, as amended March 26, 1903.)

Missouri.—A State board of law examiners, consisting of five persons learned in the law and not connected with any law school, shall be appointed by the supreme court to examine applicants for admission to the bar. Every applicant shall have completed "a common or grammar school course of study and shall possess a fair knowledge of the subjects of history, literature, and civil Government."

"SEC. 6. The examinations as to learning and skill in the law shall be upon the following subjects: Contracts, criminal law and procedure, torts, domestic relations, agency, private corporations, partnership, real property, personal property, sales, bailments, carriers, common law pleading, code pleading, equity, evidence, wills and probate, constitutional law, negotiable instruments, extraordinary legal remedies, conflict of laws, insurance, pleading and practice under the Missouri statutes, and legal ethics."

Examination fee, $10. If the examination is satisfactory, the examiners so report to the supreme court, which grants an order of admission. (Act approved February 27, 1905.)

Oklahoma.—The supreme court "shall fix the examination and admission fees and prescribe and publish rules to govern such examinations." "When a person applies to said court for admission to the bar, he shall be examined by the court, touching his fitness and qualifications," and if the examination is satisfactory he shall be admitted: "*Provided*, That said court may appoint, to serve for one or more years, a commission composed of not less than five persons learned in the law to assist in such examination." The applicant must have studied law for one year prior to his

Digitized by Google

application. In any county in which there is a law school or law department of a university, the supreme court shall, on the application of the president of such law school, appoint a committee of five attorneys to attend the commencement exercises and examine the graduates in law in reference to their qualifications to practice law. (Act approved March 4, 1903.)

Tennessee.—Chapter 247, approved March 30, 1903:

"SECTION 1. *Be it enacted by the general assembly of the State of Tennessee*, That any person applying to be admitted as an attorney or counselor in the courts of this State may be licensed to practice law only as herein prescribed.

"SEC. 2. A State board of law examiners is hereby created, to consist of three members of the State bar, who shall be appointed from time to time by the supreme court and shall hold their office as members of such board for the term of three years, except that under the first appointment they shall hold for the term of one, two, and three years, respectively, and each until the appointment of his successor.

"SEC. 3. There shall be an examination of persons applying for license to practice as attorneys and counselors at law at Knoxville, Chattanooga, Nashville, Jackson, and Lebanon, and at such other places and times as the supreme court may direct. The supreme court shall prescribe rules providing for a uniform system of examinations which shall govern such board of law examiners in the performance of their duties, and shall fix the compensation of its members at $250 each per annum and expenses.

"SEC. 4. Every person at the time of applying for examination shall pay a fee of $5 for each examination" * * *.

"SEC. 5. Such board shall certify to the supreme court the names of all applicants who shall have passed the required examination, provided such person shall in other respects comply with the rules regulating the admission to practice as attorneys and counselors, which compliance shall be determined by said board before examination. Upon such certificate, if the supreme court shall find that such person is of full age and good moral character, and otherwise qualified, it shall enter an order licensing and admitting him to practice as attorney and counselor in all the courts of the State, which license, if procured by fraud, may be revoked at any time within two years. Where any graduate of a law school of this State has been licensed by the supreme court under the provisions of this act, his license to practice law may, on request of the faculty of said law school, be sent by the supreme court to said faculty for delivery.

"SEC. 6. The supreme court may make such provisions, rules, and regulations as it may deem proper for the admission of persons who have been licensed to practice law in other States or counties."

Texas.—A board of legal examiners, consisting of three members to serve for a term of two years, shall be appointed by each of the courts of civil appeals. "It shall be the duty of the supreme court to prescribe a course of study to be pursued and the subjects in which applicants shall be examined and such general rules governing such examinations as said court may find necessary, and the same shall be uniform throughout the State."

"SEC. 5. All applicants shall be examined in writing on all of the subjects prescribed by the supreme court, and their answers shall be graded, and no applicant shall be granted a license unless he makes a grade of not less than fifty in all branches and a general average of not less than seventy-five."

"All persons shall be subject to this act, whether or not they hold a diploma from the law department of the State University."

Attorneys from other States removing to Texas shall be examined in the same manner as resident applicants, but visiting nonresident attorneys may practice in special cases without examination. Examination fee, $10. (Act of March 19, 1903.)

Digitized by Google

Washington.—The supreme court "shall fix the times when examinations shall take place, which may be either in term or vacation, and shall prescribe and publish rules to govern such examinations; and the court may appoint three attorneys at law, members of the bar of said court of not less than five years' standing, as a board of examiners to conduct written examinations of applicants for admission to the bar, under the direction of said court, the members of which said board shall hold office for one year from and after their appointment, unless sooner removed by the court. The members of said board of examiners shall be allowed and paid a per diem not to exceed ten dollars per day during their attendance upon said court in the conduct of said examinations, and mileage at the rate of five cents per mile for every mile actually traveled going to and returning from attendance upon the court at such examinations; but this section shall not be applied to persons admitted under pre-existing laws: *Provided*, That graduates of the law department of the University of Washington, after a full course of two years' study, shall be admitted without examination upon the production of their diplomas of graduation and evidence to the satisfaction of the court that they are citizens of the United States, are of full legal age, and are of good moral character."

Examination fee, $20; but no fee shall be required of graduates of the law department of the University of Washington. (Act of March 20, 1903.)

West Virginia.—"The supreme court of appeals shall prescribe and publish rules and regulations for the examination of all applicants for admission to practice law, which shall include the period of study and degree of preparation required of applicants previous to being admitted, as well as to the method of examination, whether by the court or otherwise." Upon compliance with these rules the applicant for admission to the bar is granted a license by the supreme court of appeals. The law faculty of West Virginia University has been intrusted with the examination of applicants. The examination fee is $5. Graduates of the law department of West Virginia University are by law exempt from examination. (Act approved February 20, 1901.)

Wisconsin.—A board of examiners consisting of five competent attorneys, each member to serve five years and three members to constitute a quorum, shall be appointed by the supreme court to examine applicants for admission to the bar.

"The supreme court shall, from time to time, make and adopt such rules and regulations relating to the qualifications of applicants for examination, the course of study to be pursued by such applicants, and the standard of acquirements of such applicants to entitle them to admission to practice in the courts of this State and such other rules and regulations relating to the examination of applicants for admission to the bar as such court may deem necessary or desirable. The period of study necessary to enable the applicant to take the examination shall be at least three years. The board of examiners may adopt such rules, regulations, and forms relating to holding and conducting its meetings and its procedure as it may deem necessary. The board shall examine each question presented to each applicant on his written examination and his answer thereto and mark thereon the percentage to which such applicant is entitled by his answer."

Each examiner shall receive a compensation of not more than $10 per day and his necessary and actual expenses. Attorneys of other States having practiced two years are admitted upon proof of same. (Act approved March 21, 1903.)

PROFESSIONAL INSTRUCTION AS TREATED IN THE REPORTS OF THE MOSELY EDUCATIONAL COMMISSION TO THE UNITED STATES OF AMERICA, OCTOBER-DECEMBER, 1903.

Extracts are given here from the reports of the following commissioners:

1. Henry E. Armstrong, esq., Ph. D., LL. D., F. R. S., V. P. C. S., professor of chemistry in the City and Guilds of London Central Institute.

2. J. Rose Bradford, esq., M. D. (London), D. Sc., F. R. C. P., F. R. S., professor of medicine, University College, London.

3. W. H. Gaskell, esq., M. D., LL. D., F. R. S., fellow of Trinity Hall, Cambridge; university lecturer in physiology.

4. W. P. Groser, esq., of the Inner Temple (representing the Parliamentary Industry Committee, and to inquire into legal education).

SUMMARY OF THE MAIN POINTS TREATED BY THE FOREGOING COMMISSIONERS IN THEIR REPORTS.[a]

Prof. H. E. ARMSTRONG deals briefly with the various grades of educational activity, contrasting American work with that of corresponding English institutions. In connection with the common and high schools he refers particularly to the maintenance of discipline and to the lack of the power of concentrating attention manifest in the scholars. The value of manual training is insisted on. Coeducation and the predominance of female teachers are discussed. The undue length of the college course and of the subsequent professional course is commented on; its unfortunate consequences are pointed out, as well as the need, both in America and here, of reforming and improving the system of education so as to shorten the period of training. The remarkable manner in which science is organized in the service of the state in America is illustrated more particularly by reference to the work done in Washington by the Department of Agriculture, and our need of effective organizations similar to those which exist in the United States is insisted on.

Dr. J. ROSE BRADFORD deals only with advanced subjects of medical education, considering these under heads such as "Relation of hospitals to medical schools," "Chemical laboratories," and the "Teaching of medicine and pathology." He was much impressed by the enthusiasm shown both by students and by teachers and by the fact that all the leading universities had fine laboratories, the equipment being of a high order of excellence. In all the medical schools there is a tendency to bring clinical medicine more closely into relation with recent scientific developments than is the case here, blood counts and other investigations being made, not from a mere diagnostic point of view, but in a more or less routine fashion. Such a practice must tend to put medicine on a more scientific basis. Instruction is far more systematized. There is a marked tendency to abolish didactic lectures and to pay increased attention to laboratory instruction, but the opportunities afforded to students of obtaining practical acquaintance with disease are fewer than are given here. In the examination for the degree the record of the work done by a student plays an all-important part.

Dr. W. H. GASKELL deals with the teaching of anatomy and physiology. He first calls attention to the fact that there are no outside examiners in the medical schools and that whether a student passes or not is decided by his teachers alone. The Harvard method of concentrating attention upon at most two subjects at a time is then fully described and discussed, its thoroughness in comparison with our English system being pointed out, and the possibility of introducing it here considered. The length of the course of instruction is incidentally referred to. Doctor Gaskell insists on the advantage of bringing cognate subjects together and of teaching all the preliminary subjects in a scientific school apart from the hospital. Finally, teaching appliances are considered, the wealth of provision being dwelt upon. Doctor Gaskell particularly directs attention to the large numbers of students—future teachers—attending the classes in experimental psychology and to the absence of provision for this subject here.

Mr. W. P. GROSER deals separately with legal education. He speaks of the American system as recognized as the most adequate invented for teaching law as a profession. A course for a central school of law in London is suggested.

FROM REPORT OF PROF. H. E. ARMSTRONG.

In most American colleges the arts course occupies four years; in a few only is it possible to graduate in three years. At Harvard College, where the subject of the length of the course has long been under discussion, it has recently been determined

[a] This summary is taken from the Report of the Commission, pp. xvi, xviii, xix.

Digitized by Google

to allow students to attain the bachelor of arts degree in three or three and a half years instead of four years; but owing to the improvement in the courses of instruction it will be possible to require from candidates who obtain the degree in the shorter period evidence of higher scholarship than has been expected of their predecessors at the end of four years. The arts course at the Johns Hopkins University extends over three years; but the standard of matriculation is said to be considerably higher than that maintained by institutions which require a residence of four years. The question whether the professional schools of the universities shall require a degree in arts or science from all candidates for admission is now being much debated. There is clearly a strong desire to raise the standard. This is well expressed in the following passage from the report made by President Eliot, of Harvard, at the close of 1902:

Since the wise and efficient conduct of American affairs, commercial, industrial, and public, depends more and more upon the learned and scientific professions, the universities owe it to the country to provide the best possible preparation for all the professions. This best possible preparation can only be given to young men who up to their twenty-first year have had the advantages of continuous and progressive school and college training.

President Eliot gives the following table, showing the proportion in nine universities in which law and medical students holding a preliminary degree stand to all students:

University.	Holders of a preliminary degree.	Whole number of law and medical students.	Per cent of holders of a preliminary degree.
Harvard	886	1,134	78.1
Columbia	562	1,260	44.6
Pennsylvania	331	928	35.6
Northwestern	220	691	31.8
Michigan	216	1,367	15.8
Yale	119	398	29.9
California	118	269	44.6
Chicago (medical)	100	325	30.7
Cornell	75	607	12.3

Harvard University "has definitely determined to pursue the policy of requiring for admission to its professional schools a preliminary degree, and has already applied this policy in all its professional schools except the dental school. The result has been an improvement in its professional schools striking in proportion to the strength of the contrast between the former students and the present in regard to their previous training."

At the Johns Hopkins University candidates for the degree of doctor of medicine must be college graduates or must give evidence by examination that they possess attainments indicated by a baccalaureate degree in arts or science. Entering college at 18, the student is 21 or 22 years old on commencing this course of professional study; he is, therefore, at least 25 or 26 at the conclusion of the medical course. A period of postgraduate instruction at home or abroad is then often entered upon. It is not unlikely that the example set by law and medicine will ere long extend to other professions. The undue length of the course of study thus arranged has naturally attracted attention. Recently President Murray Butler, in particular, has commented on it and has proposed a further curtailment of the course. There are instances of such curtailment already. Thus at Cleveland, Ohio, where the Adelbert College and the Case School of Applied Science exist side by side, each having a complete four years' course, it has been arranged to give a double degree at the end of five years to those who have spent three years in the college and then two years in the school of applied science. President Butler proposes that the B. A. degree given at the end of a two years' prescribed college course shall be made the condi-

Digitized by Google

tion of entry to a professional course. He would give the M. A. degree to those who have followed an arts course during four years.

It is remarkable that a people supposed to be practical, like the Americans, should be prepared to devote so long a period to study. I had many conversations on the subject, in which I expressed my surprise, but I must confess that, as a rule, my friends seemed surprised I should take up such an attitude. I am almost led to doubt whether, in matters of education, our American cousins may justly be regarded as a practical people. A course of study prolonged to an age bordering on 30 rather than 20 implies a most serious limitation on the period during which the individual exercises independence; it casts an improper burden on parents, and it postpones the age of marriage unduly. This last point especially deserves some consideration. The following table, given by President Eliot in his report, records the number of surviving children of members of six classes graduated from Harvard, from twenty-five to thirty years after graduation:

Class of—	Number of A. B.'s.	Number married.	Number of children surviving, 1902.
1872	114	82	165
1873	131	96	181
1874	165	124	247
1875	141	90	171
1876	142	106	212
1877	188	136	286
Total	881	634	1,262

He points out that—

If it be assumed that the surviving children are about one-half males, it follows that the six classes have by no means reproduced themselves; that they have, indeed, fallen 28 per cent short of it. Twenty-eight per cent of the members of these classes are unmarried, and those who are married have, on the average, only two surviving children, so that the married pairs just reproduce themselves on the average.

It is impossible to overlook the significance of such facts. Again to quote President Eliot:

The table suggests that the highly educated part of the American people does not increase the population at all, but, on the contrary, fails to reproduce itself. If many other colleges and universities publish class reports analagous to the Harvard reports, a competent statistician might establish from the assembled reports some interesting and important conclusions. It is probable that the regrettable result indicated in the table is due in part to the late postponement of marriage on the part of educated young men, a postponement which the protracted education now prescribed for men who enter the learned and scientific professions makes almost unavoidable. The young physician, lawyer, engineer, or architect is now fortunate if he marries at 28 or 29, whereas he should have married at 25 or 26. To make earlier marriage possible is one of the strong inducements for bringing to an end the school course at 17 or 18, the college course at 20 or 21, and the professional training at 24 or 25.

Our blind belief in academic methods of training has perhaps led us to overlook yet other all-important reasons for shortening the courses. While at college or technical school the student is not only withdrawn from the world of experience—and that, too, during the most susceptible period of youthful freshness—but is always dominated by teachers; the time is so entirely spent in learning from others that there is no possibility of properly developing either imaginative power or individuality. Therefore not only is physical power sacrificed but mental procreative power also, this latter surviving only in the genius; whereas, in reality, if education were of true avail, its one great and chief office should be to call forth and develop whatever spirit of originality, whatever element of genius, may lurk in the mind. (Pp. 17-19.)

FROM REPORT OF DR. J. ROSE BRADFORD.

The medical schools visited were those in connection with the universities in the cities of New York, Philadelphia, Baltimore, Chicago, Ann Arbor, Boston, Ithaca, Montreal, Toronto, and Quebec. In New York City the medical schools of Columbia and Cornell universities and of Bellevue were seen; in Philadelphia the medical school of the University of Pennsylvania and that of the Jefferson Medical College. At Baltimore the Johns Hopkins University was visited, and at Boston the Harvard Medical School and the Massachusetts General Hospital, and at Ithaca Cornell University was seen. The Medical School of Cornell is situated in New York City, but the general university buildings are situated at Ithaca, and the veterinary department, a well-known institution in the United States, is also situated there. At Montreal the McGill University was visited, at Quebec Laval, and at Toronto the University of Toronto. In all these cities several of the hospitals in connection with the medical schools were also visited, and it is my pleasant duty to record the extreme courtesy and kindness which everywhere was shown and the very great facilities that were offered in all the institutions for obtaining all information required.

In most of the cities the hospitals were only indirectly associated with the medical departments of the universities, and their clinical facilities were not exclusively employed for the instruction of the students of a single university or medical school. (P. 64.)

The relation of hospitals to medical schools is often quite different in America from what obtains in this country. It might be said that here a medical school has, as a rule, grown up in association with and as a development of a hospital, and, in fact, with few exceptions the leading medical schools in London have begun as hospitals, and the medical school has, so to say, grown up secondarily. In America, on the other hand, the medical school is an integral part of the university and controlled by it, and the hospital is usually an independent institution managed by trustees, the clinical opportunities afforded by it being often shared by several medical schools. (P. 65.)

The system in vogue in England of clerks and dressers is one which scarcely exists in the United States, although in the Canadian medical schools it is in full operation. At the Johns Hopkins Medical School ward work is done by clerks and dressers, as is the universal custom in this country; but at Baltimore the period of service is three months, and the men filling the posts are in their fourth or last year. * * *

These two points—on the one hand the limited period of service of the visiting and teaching staff, and on the other the absence of the clerk and dresser system—were those which most impressed an English teacher as indicating the main points of difference in the relations of the hospitals to the teaching medical schools.

Many of the American teachers are alive to the advantages of the clerk and dresser system, but they point out that under their system the students get the practical acquaintance with disease subsequently, during their period of office as "internes," at a time, moreover, when they are more fully capable of making use of the opportunities afforded them. In the English system the student becomes a clerk or dresser at a period in his career when he knows little or nothing of medicine or surgery, and thus they argue that the great opportunities afforded him are to a considerable extent wasted. With their system the "interne" has already graduated and has acquired a knowledge of medicine and surgery which should enable him to make full use of his opportunities. The great and obvious disadvantage of the American system is clearly the fact that not all students can possibly become "internes," and thus a number of men must start in practice without the advantages that the daily life in the ward in contact with disease imparts. I was informed on numerous occasions that about half the students in the leading medical schools become "internes" sub-

Digitized by Google

sequently to graduation, either in the hospitals attached to their own schools or in some other city or provincial hospitals, so that at least 50 per cent of the students not only graduate but pass out into practice without this invaluable experience. This is a very striking, if not the most striking, difference between the system of medical education in vogue in the United States and that followed in this country and also in Canada.

Clinical laboratories.

In most of the medical schools visited well-equipped clinical laboratories were a conspicuous feature, and this was more especially the case in the University of Pennsylvania, Johns Hopkins University, the Massachusetts General Hospital, and in the University of Michigan at Ann Arbor. The laboratories contained accommodations for chemical, bacteriological, and histological investigations, and were in intimate association with the hospitals in relation to the particular medical school. (Pp. 65–67.)

A great deal of the instruction of the students in clinical medicine is carried out in the out-patient or dispensary clinic, and in many of the universities visited the equipment for teaching purposes in the out-patient department was of a very high order of excellence. In some, as at the Massachusetts General Hospital and at the Cornell Medical School in New York City, these out-patient or dispensary departments had only recently been built, and their equipment left nothing to be desired. In some instances, as at Cornell, for example, they are built in the college or medical building and not in the hospital; in others, as at Boston, they are in direct relation with the hospital. * * *

The close interrelationship between the clinical laboratory and clinical medicine, both in out-patient and in-patient practice, and the very thorough and complete manner of preserving and recording the results gained, were among the most striking impressions of my visit. In some of the medical schools visited the record of such clinical examinations, as blood counts, urine, and gastric analyses, were kept on printed forms, which were of a very elaborate character. (P. 69.)

The teaching of medicine.

In all the universities visited a four years' curriculum was in vogue, and inasmuch as a year was not devoted, as is the custom in this country, to the preliminary subjects of chemistry, physics, and biology, the four years of medical study common in the States and in Canada are more or less comparable to the four years in this country subsequent to the first. It is very difficult, however, to carry the parallel between the systems of education in the two countries any farther, because we are at once met with very fundamental differences, both in the methods of teaching and in the curriculum. The most important differences in the methods of education may be summarized by stating that in the States the whole course of instruction is in the first place far more systematized than is the case in this country, and there is probably far more supervision of the individual student throughout the course of his studies. An Englishman is, perhaps, most struck with what I have called the systematizing of the instruction. Almost every hour of the student's time is allocated to definite and specific studies, and very commonly these are carried out in very small classes under the direct supervision of an instructor or demonstrator. * * *

In the next place great use seems to be made of drawings, lantern slides, models, and, in fact, all measures directed to bringing the objective side of the subject before the student.

Perhaps the most striking point of difference apart from the extreme systematizing of the work was the diminishing importance attached to lectures formal and didactic in character. In many of the leading medical schools of the country, but by no means in all, didactic lectures on such a subject as medicine are no longer given, the

Digitized by Google

prevalent view being that the lecturer can not very well bring before the student the subject-matter in a better form than that in which it is presented in the best available text-books; and thus general medicine is in many of these schools no longer taught by lectures. The abolition of lectures is very general in all the subjects of medical education; thus, for instance, professors of anatomy may be met who assert that they have never delivered a lecture. In many schools, although the systematic courses of lectures on such a subject as medicine have been abolished, the professor gives an occasional series of lectures on some special subject of general or perhaps of special interest. The abolition of lectures, however, is not universal, and in some medical schools lectures on medicine, for instance—two a week or more—are still given. Speaking broadly, the general trend of opinion seems to be at any rate in favor of the curtailing of lectures rather than of their complete abolition, at least in such a subject as medicine. In some subjects the abolition of lectures has been followed by the far greater development of laboratory work. In the case of medicine the place of the lecture is taken by what is called the recitation. This varies enormously in educational value in different schools. In some in the recitation the teacher meets a section of the class and a given subject is discussed between them, the teacher questioning the class, and the individual members of the class frequently questioning the teacher. In fact, in many of the recitations it was very striking to see that the ordinary distinction between the teacher and the taught was very largely broken down, and that the teacher was, so to say, almost a member of the class. In such instances the recitation was based on a given subject which the class had previously read up in one or more text-books. It is obvious that such a method of instruction has a very distinct educational value, particularly if the subject is selected judiciously. In other instances the recitation was based on a given text-book, and the class was informed at a previous meeting that at the next meeting pages so-and-so to so-and-so would be considered, and in the course of the academic year the text-book was gone through almost page by page by the class. The attendance at recitations was remarkably good, and the students were earnest and eagerly took notes. Where the recitation was based on a text-book, the recitation was really a means of insuring that the student had made himself acquainted with the text, although, doubtless in many instances the experience of the teacher enabled him to add to the information imparted by the book. The recitation in one form or another may be said to be universal as a system of instruction, and has to a great extent, and, in some instances, entirely, supplanted the lecture.

Another difference between the American system and the English lies in the greater subdivision of the subjects and the well-known large number of specialties. Thus the student will follow courses on medicine, on laryngology, on surgery, on orthopædic surgery, nervous diseases, electro-therapeutics, diseases of children, skin diseases, genito-urinary diseases, etiology, opthalmology, mental diseases, history of medicine, and dietetics.

Another fundamental difference, already alluded to in this report, is the absence of the clerk and dresser system in the States, except at the Johns Hopkins Hospital. The student, however, is taught physical signs and the method of taking histories, and has cases of disease demonstrated to him in small classes under the charge of an instructor. The classes for instruction in case taking, as also those for instruction in physical signs, were quite small in number and usually may be said to have consisted of some half dozen or dozen students in charge of an instructor. (Pp. 70–71.)

The attendance at the ward visits, or, as they are frequently termed in the States, "ward walks," was more restricted, as it was customary to divide up the students into sections of 12 or 20 or 25 men, and these sections had the right to attend the visit of the visiting physician or surgeon. * * *

The out-patient practice or dispensary is very largely used for teaching purposes, and it is a common practice for the professor of medicine to attend on certain days

Digitized by Google

and to hold an amphitheater clinic in the presence of a large class. The patients are out-patients. They come to the dispensary and frequently are examined in small, well-equipped rooms by two students, one of whom takes the history and the other the present state. The notes recorded by the student are written by the student on suitable cards and are then handed to the professor, who examines the patient, demonstrates the signs, cross-examines the student, and points out features of interest and discusses the case generally. This, no doubt, is a valuable method of instruction and one greatly relied upon for instructing the students in clinical medicine. (P. 72.)

To sum up, it may be said that the instruction in the advanced subjects in medical education, such as medicine and surgery and their special branches, is much more systematized than with us; that lectures play a comparatively unimportant part; that clinical lectures and demonstrations on patients in clinical theaters before a large audience are a leading feature, and that the opportunities of the students to obtain practical acquaintance with the phenomena of disease in the wards of the hospitals are not as great in the States as they are with us. This, no doubt, is in part dependent on the large number of students in proportion to the number of hospital beds available, but it depends also on the system of teaching adopted and on the mode of hospital administration in vogue.

A still greater difference, however, between the American and the English system remains to be mentioned. In this country it is very unusual for the student to begin hospital work and to come actually in contact with the facts of clinical medicine and surgery until his third year, or, if the preliminary year spent in the study of chemistry, physics, and biology be counted, until his fourth year. He does not study the final subjects until he has completed the subjects of anatomy and physiology. It is true there are still a few schools, e. g., the University of Edinburgh, where this does not obtain, but, speaking generally, it is almost the universal custom, and there can be little doubt that it will very shortly become quite universal. In many of the leading universities of the States this is by no means the case, and classes for the study of physical diagnosis are not uncommonly held, not only in the second year, but even at the commencement of the second year, at a time when physiology and anatomy are being studied, so that the student is assumed to begin his third year with a knowledge not only of physical signs but even of such a subject as bandaging.

Pathology.

The pathological departments in all the universities mentioned were visited. The laboratories were generally fine buildings with very complete equipment, and, especially in those that had been more recently erected, ample space was provided. They were well lighted and fitted with all modern requirements. Thus in many cases incubation was done in a "hot room" of the modern type rather than in separate incubators, and there were very commonly also installations for cold storage. There were great individual variations as regards the facilities for obtaining post-mortem material. In some of the universities the supply of material was ample; in others difficulties were experienced, and the total number of post-mortems obtained in the course of the year was not large, and had to be amplified by material obtained from the private practice of various teachers connected with the school. Owing to the relationship existing between the hospitals and the medical schools, post-mortem material in any one university was not, as a rule, obtained from a single hospital, but from a number. (Pp. 73–74.)

In all the universities visited the equipment for the practical instruction of bacteriology, morbid histology, etc., was extremely good. Thus, at Harvard, I was informed that 175 oil immersion microscopes were available for teaching purposes, and that it was customary for the students to pay a rent for these rather than to purchase their own. Where the classes were large it was the custom to divide them

Digitized by Google

into sections, and hence it was necessary for the course to be repeated in order to fit in with other courses; but in all instances the proportion of instructors and demonstrators to students was approximately one in ten.

A most important feature of the system of instruction everywhere was that a very complete record of the students' work was kept by the demonstrators and instructors and a report made to the professor by these gentlemen.

In many, if not in all, instances attendance at these practical classes was compulsory, and I was informed at some of the universities that if a student missed three attendances in such a practical class without a legitimate excuse he was liable to lose the entire year. Certainly the attendance was remarkably good and the enthusiasm and diligence of the students quite remarkable.

Another striking feature of the practical instruction, both in bacteriology and in pathology, was the fact that unknown cultures and unknown sections were given out frequently, sometimes once a week, and the students required to diagnose the organism present or the nature of the morbid lesion in the section. (P. 75.)

In addition to the compulsory courses in most universities there are a number of optional courses, and in these instruction of a more advanced type is given. Not only is this the case, but very frequently students, and even junior students, are deputed to do pieces of research work under the direct supervision of the professor of the department, and I gather that this work would count toward the taking of the degree. In some instances—as, for example, at Harvard—a student can elect in his fourth year to take a special subject for research work, as physiology, pathology, or bacteriology, and devote a great part of his time to this. If this research work is of a satisfactory character he may receive his M. D. for it. These students are necessarily unable to devote their time as fully to the compulsory subjects, and especially to the clinical subjects, as is the case with the ordinary students; but it must be remembered that in the States the M. D. does not give the right to practice, and such men are usually intending to devote themselves to the study of these subjects as their life work and have no intention of practicing.

In the University of Chicago, which is undergoing very rapid and extensive development, and has received very large donations, there are some differences to be observed as to the regulations affecting the curriculum. The year is divided into quarters of three months' duration, and the academic year occupies three quarters. In other words, there is a nominal vacation of one quarter, and each professor is entitled to one quarter's holiday. (P. 77.)

No very useful purpose can at present be served by comparing the examination systems in vogue in the States with those obtaining in this country, as the conditions are so entirely different, in that the degree granted by the universities confers no right to practice. The latter is obtained by passing a State examination under the supervision of a special board. In all the universities the manner in which the student has followed his courses of instruction is a determining factor in deciding whether he shall or shall not receive a degree. Further, it is very usual for the examination in each subject to take place at the end of the course of instruction in that subject, and hence the examination—particularly in what are called in this country the preliminary and early subjects—is to a large extent a piecemeal one. As regards the final subjects—medicine, surgery, and obstetrics—in some instances the student is examined in all at one time.

The fundamental and far-reaching difference between the American and the English systems lies in the fact that the record of a student's work, recitations, laboratory classes, ward work, is kept, and very largely, and in some cases almost entirely, determines the result. A very prevalent custom is not to admit him to the written or practical examination often held at the end of a course, unless the report of his class work is satisfactory. Such written or practical examination when held is conducted by the professor himself, but the report of the class work is made by the

Digitized by Google

instructor or demonstrator in charge. All the student's drawings, laboratory notes, clinical records of cases, seem to be marked and pigeonholed.

In many universities if the student is rejected in three branches he loses a whole year and the courses have to be repeated. It is difficult to form an estimate as to the number of students who fail, but in the leading universities the proportion would seem to be small compared with what obtains in England.

To sum up the general impressions, it may be said, first, that the enthusiasm of the teachers and of the students was one of the most striking features of my visit. Secondly, all the leading universities had exceedingly fine and in some cases magnificent laboratories, and the equipment was of a high order of excellence. Thirdly, in the teaching of the nonclinical subjects the laboratory and practical side was especially developed. Fourthly, systematic instruction by lectures seemed not to be in general favor. Fifthly, even in the final subjects, medicine, surgery, etc., the teaching was extraordinarily systematized, but speaking generally, the students did not have the clinical facilities they obtain in this country. Sixthly, the scientific investigation of disease in clinical laboratories had reached a very high order of development. Seventhly, the teachers in this country in such subjects as pathology might well consider whether some of the methods in vogue, such as the early study of bacteriology, and the custom of giving the class unknown organisms and sections to identify, and the careful record of the student's work, are not features thoroughly deserving of imitation. (P. 78.)

FROM REPORT OF DR. W. H. GASKELL.

In many respects the methods of education in the scientific medical studies in vogue in the United States and Canada differ from those current in England. There is at present a feeling of unrest and uncertainty about the best method of instruction. Everywhere I was told that the present time is a period of transition; that a new scheme of instruction was being tried, but it was difficult to say at present what its results would be. American ideas and methods of instruction have largely been taken from the German universities, largely from the Scotch; now the desire has arisen to work out their own salvation, to start, if possible, some method of instruction that shall be neither German, Scotch, nor English, but American. Each school, therefore, is working on its own lines, so that the relative importance attached to lectures, recitations, and practical work differs markedly in different places; while, on the other hand, in certain broad aspects all the schools are alike. * * *

However great may be the difference in teaching methods in different places, in one respect they are all alike both in the States and in Canada, and in that respect they form a marked contrast to our English method. In no case are there outside examiners. The question whether or no a student can pass in any subject is decided by his teachers alone, and is decided not only by a separate examination but also by the nature of the work done by the student throughout the term. For this reason, then, every inducement is given to the student to attend regularly and carefully to his practical and lecture work.

Every student belongs to a certain year and moves with the rest of his class from freshman to sophomore, sophomore to junior, and junior to senior. It is considered a disgrace to be obliged to take the work of the year below your proper standing. The work for each year is settled by the teachers of the faculty and the university authorities, and in most cases is extremely rigid; each year there is an examination in the subjects for that year, which takes place immediately upon the termination of each course of instruction; the results of this examination, together with the marks obtained during the course, determine whether the student has passed or failed in that subject; if he has failed in only one or two subjects he has a chance of

Digitized by Google

making good those failures by working in the summer and passing a supplementary examination in September. If he fails in many subjects he loses his year and has to take all the year's work over again; or he may be advised to try somewhere else, where it is easier to get a degree. Each course is got rid of entirely as soon as it is finished, and the student can dismiss it from his mind as far as examination is concerned. I think, speaking generally, it may be said that the knowledge of each subject is tested during and immediately at the close of the instruction in that subject without regard to any other subject. (Pp. 147–148.)

Method of teaching.

In all the medical schools of the United States the teaching in any subject is carried on by means of lectures, conferences, recitations (catechetical classes), and laboratory work; to which must be added in some cases seminars. Among these methods the greatest stress appeared to me to be laid on the recitations and on the laboratory work. In many cases didactic lectures were looked upon as nearly valueless, on the ground that they were only a repetition of what was already in the textbook, and were not, therefore, needed. In other cases, as at Harvard, the standpoint was taken that all learning comes best by observation and direct experimentation, and that the principles of the subject are best brought out by the Socratic method of question and answer between the teacher and the student, the foundation of the teaching being based upon the repetition by the student of all the possible fundamental experiments upon which modern physiology is based. Each day's work is followed by a discussion between a teacher and a section of the class of the principles elucidated by the experiment—what further knowledge it has led to, what are its limitations, etc.—a method of catechetical instruction which has for its object, not to cram the men for examination purposes, but to make them think out for themselves the principles which each piece of practical work elucidates, and its bearing on the science of physiology. Didactic lectures are given on those parts of the subject which can not be treated by the student in the laboratory, and, as far as possible, are illustrated by demonstration given during the lecture. (P. 148.)

Another very important feature of the Harvard system, upon which great stress is laid, consists in the preparation by the students of theses, which are read at fixed times and discussed in the class by the students and teachers. A number of subjects are chosen beforehand for such theses, and the literature on these subjects is tabulated by the professor and his assistants. To every member of the class (as many as 120) one of these subjects is alloted for his thesis, and he is supposed to read the scheduled literature in the original languages and write a critical essay on those papers. Of the whole 120 theses thus prepared, 50 are selected for public discussion, and the rest are read but not discussed. In addition, each student is expected to prepare himself in two of the theses selected for discussion, so as to be qualified to take part in such discussion. He also has to prepare a bibliographical list of the literature on some other subject. The selection of the 50 students whose theses are to be read and discussed mainly depends on the reports of the teachers in the previous half year, i. e., the teachers in anatomy and histology; those who have done best in those subjects being selected. It was unfortunate that the time of the year when the Commission was in America was too early for us to be present at the reading and discussion of any of these theses, as they do not begin until March. I am, however, assured that they have been a great success. (P. 149.)

To my mind, two of the most striking points about the laboratory instruction of all kinds in the States are the energy and activity displayed by the teachers, their earnest endeavor to do their utmost without sparing themselves, and the determination of the students to be taught. I do not think it is only because the practical work counts in their final examination that the men attend and work steadily, but because they want to get their money's worth; they have come to the university to be educated

Digitized by Google

for the medical profession, and the stimulus of want of means spurs on a large number, with the net result that the class as a whole attends well, works well, and in consequence soon becomes thoroughly interested in what must interest everyone—the discoveries of science. This system of concentration can only be carried out efficiently when the whole of the instruction has been planned out carefully beforehand and every detail of the daily working thought out and provided for in advance; this is done at Harvard by providing for every pair of students a complete set of all the apparatus that can possibly be needed for the carrying out of the course of experiments. The whole of this apparatus is made in the workshop of the laboratory by a skilled mechanician, and has been devised by Professor Porter with an especial desire to combine efficiency with cheapness.

In all American laboratories, laboratory servants are very scarce, so that in every possible way labor-saving appliances are used; at the end of each experiment the students have to put away their apparatus, clean up their places, and leave everything ready for the next day, so that it is absolutely necessary that each man should be provided at the beginning of the course with all that he can possibly require.

This deficiency of laboratory servants is not altogether an unmixed evil, for it has contributed to force the teachers so to arrange their laboratory work that each student should have his own place and his own set of material during the whole of the time of his attendance at that particular course. (P. 153.)

If it were possible to differentiate the students at the outset it would largely do away with what to my mind is the weakness of the American system, viz, that the democratic idea assumes an equality in the students, and therefore the same instruction is given to all—the same lectures, the same recitations, the same laboratory work. All are supposed to go the same pace, which can not, therefore, be the pace of the quickest, so that, although the system may mean, and I believe does result in a leveling up of the lowest class, it must at the same time mean a leveling down of the highest class. * * *

At the Harvard Medical School a new experiment has just been instituted with respect to the medical curriculum in the fourth year. The object of this experiment is to enable those students who are desirous of becoming specialists or teachers in any department of medicine, and do not intend to practice medicine, to spend their last year in elective courses, and still to obtain the degree of M. D. The new course of study is so arranged that the first three years are devoted to prescribed work and the fourth year entirely to elective courses. These elective courses consist of advanced teaching in the various departments of medical study, and as far as anatomy and physiology are concerned are divided under the headings, anatomy, histology, histology of the nervous system, embryology, physiology, physiological chemistry. Of the whole group of electives the student must take at least two of the subjects and must obtain credit for at least one thousand hours of work during the year. The student is intended in these elective courses to carry out if possible some original research.

Such an experiment is possible in the States, because the degree of M. D. does not in itself give the right to practice medicine; that is given only by the passing of the State examination. It is an attempt to enable a man who desires to become a teacher in some special scientific subject connected with medicine to obtain some knowledge of medicine and the nature of the medical curriculum and at the same time to make himself more efficient in the subject he intends to teach. In the States, even more than in Great Britain, it would be impossible to obtain a professorship in such subjects as anatomy and physiology without a medical degree, while at the same time this very experiment indicates a desire to shorten the time spent in the hospitals for students who intend to take up such a teaching career. How the experiment will turn out it is impossible at present to say, as the new elective curriculum of the fourth year only begins in the autumn of 1905.

Digitized by Google

The courses of instruction in most of the universities last from the beginning of October to the end of May. * * * Chicago University has started an innovation which is at present in the experimental stage, but is considered so far to be a great success. The instruction given is on the quarter system, the whole year being divided into autumn, winter, spring, and summer quarters. Each is about twelve weeks in length, and there is a recess of one week between the end of each quarter and the beginning of the next following, except that there is no interval between the end of the spring and the beginning of the summer quarter, and there is a recess of one month at the close of the summer quarter. All of these quarters are available to the student for obtaining credit, but in each year he can only obtain credit during three quarters. (Pp. 154–155.)

With the academic course requiring four or three years and the medical course a further four years, it is probably eight years before the student obtains his M. D. degree, which means if he enters college at 18 years of age that he is 26 years old before he gets his degree. The length of time required to obtain both degrees is recognized as a drawback, while at the same time the great advantage of a collegiate course is universally acknowledged, so that the tendency, to my mind, in the States will be more and more to institute a combined course of six years in length, which will enable the student to obtain his academical degree at the end of four years and his medical at the end of six—to imitate, in fact, the system in vogue in England and in Canada. This system is already in working order in the more western universities—Chicago, Minneapolis, and Ann Arbor. The teaching of human anatomy and physiology is included in the scientific subjects for the scientific degree. (P. 156.)

Teaching appliances.

Naturally the greater number of subdivisions of the preliminary medical scientific subjects universally found in America than is the case in Great Britain necessitates a greater number of well-equipped laboratories and a greater staff of teachers. With respect to the first item—the building of laboratories—the activity going on in the States makes one ashamed of one's own country. Everywhere one has the feeling that the whole country is so impressed with the desire for the best educational methods that whenever new buildings are required the money is forthcoming for their erection. Either it is given by a munificent donor, or is left by will, or is obtained from the past alumni and the general public by the exertions of the president. In the State universities matters may move a bit more slowly; but here, too, new buildings arise with considerable rapidity at the demand of the faculty. It is impossible to enumerate all the rooms for students and research in the different departments of all the universities visited; it is sufficient to say that at Harvard and at Philadelphia University it was felt that the laboratories for the preliminary scientific medical subjects were not quite up-to-date, and in consequence in both places palatial buildings are arising for the teaching of physiology, pathology, etc. The building at Philadelphia, which is nearly completed, will be, I should think, the finest in the world, unless the Harvard building beats it. At Chicago, also, there is practically unlimited space for buildings and also an unlimited purse.

All the laboratories are fitted with electric light and with electric power and complete telephone arrangements, so that every department can communicate with every other, as well as with the world at large. (Pp. 158–159.)

Conclusions.

As the result of my investigation into the teaching of anatomy and physiology in America, I would like to make the following suggestions:

1. In our medical and scientific schools separate laboratories with a separate staff of teachers ought to be provided for anatomy, histology, physiology, physiological chemistry, experimental psychology, and perhaps neurology. Such laboratories

Digitized by Google

should be arranged on the laboratory unit plan and fitted up throughout with electric light, electric power, and telephones.

2. In cases where there is not sufficient accommodation for the whole class at once, the class should be divided into sections and the teaching so arranged that every student has his place to himself during the whole of that course.

3. I would not advocate the extreme concentration method of learning a subject, but would rather spread such a subject as physiology (in the English sense) over two years. In the first year I would give a general course in which the subject should be treated as a whole in an elementary way, taking, therefore, together the histological, chemical, and physiological aspects of the subject, so as to give the student a good general view of the subject and leaving the more detailed study to separate courses in the second year in the separate laboratories of histology, physiological chemistry, and physiology.

4. I am inclined to think that histology should not be connected with embryology and put into the department of anatomy, but the laboratories of histology and physiological chemistry should be under the control of the professor of physiology, the head of each department being an assistant professor.

5. I am not convinced that didactic lectures are in large measure a mistake and that recitations should largely take their place. I think, however, that the system of seminars should be encouraged as much as possible.

6. A six or seven years' conjoint course for the academic and medical degree should be encouraged as much as possible, and in all universities the preliminary medical scientific subjects should be included among the subjects for the degree in arts or sciences.

7. There is much to be said in favor of taking into account the work done by the student during the term in his examination. There are, however, so many difficulties in the way, owing to our system of examination, that it does not seem advisable to lay much stress on this point. (P. 161.)

REPORT OF MR. W. P. GROSER ON LEGAL EDUCATION.

"The law," Burke wrote, "is a science which does more to quicken and invigorate the understanding than all other kinds of learning put together." The great number of persons in the United States who take a degree in law with no direct intention of practicing testifies to an agreement. The difficulty of teaching law, which differs substantially in different States, necessitates that its study should be scientific, that principles should be exalted, applications treated as illustrations and not as substantive rules. Consequently all the principal schools aim to induce rather a wide knowledge of abiding principles than a minute proficiency in ephemeral practice. In many schools courses in allied subjects, e. g., economics, ethics, politics, are popular, and though more emphasis is laid at Oxford on jurisprudence and speculative topics as substantive subjects, yet American instruction is applied so systematically to fundamentals as to produce little loss in the educational value of the training.

Even more obtrusively American law schools are professional schools. Graduation in some States entitles to admission to practice de cursu, in others the statutory examination is unimportant. The branches are undivided, a circumstance of great assistance to the young lawyer, though not, I think, an advantage to the law or to the client. Everywhere admission in itself is cheap, and huge numbers qualify—e. g., the State University of Michigan has 900 law students, Harvard 650, Yale 350. The growth of demand is evidenced in the University of Chicago, whose law school has existed only some three years (and contains now 96 students) but which has erected a new law building to accommodate 500, with space reserved to double the size and a

Digitized by Google

library of some 20,000 volumes. Graduation implies fitness for practice everywhere, and a notable instance of the public respect for systematic education is shown by the phenomenon, strange to us, that a distinguished law-school career is of direct professional advantage. The benefit of reading in chambers or service as articled clerk in a solicitor's office is perhaps undervalued, but in modern conditions it is impossible to doubt that, except under exceptional circumstances, the systematic three-years' instruction in such schools is infinitely more valuable than any combination of reading and office work practicable within that time. Three years is little enough to gain a scientific knowledge of law adequate for professional purposes, even with no distraction, and when the training is practical fulfills all the requirements of the student. In almost all States the articled clerk disappeared some years ago.

The atmosphere of legal thought among the students is notable. Their moot courts and law clubs are conducted with perfect seriousness, and almost invariably the law school is spoken of as an example of keenness to the university. Professional proficiency and success is the inducement, for little emphasis is laid on examinations, which are applied rather as periodic tests of progress than as intrinsically important. The schools are graduate (as Harvard) or undergraduate (as Michigan). Previous graduation in arts is very usual even when not required. It is because there is a public opinion for and professional advantage in high education that so many take two courses, to the great advantage of all concerned.

The effects of the system will not be apparent for years; but they may be looked to with confidence to counteract the tendency to prolixity and inaccuracy often apparent in American advocacy, and the neglect of etiquette and consequent loss in dignity sometimes noticeable. The court, e. g., of his honor, Judge Elliott, of Minnesota, is an example of admirable legal decorum and of the possibilities of personal influence by judges imbued with legal reverence by these methods.

The methods of instruction are two: The English system of text-books and lectures and the "case" system, pure or modified. The latter was inaugurated by Harvard, and was regarded as an innovation so dangerous that the Boston Law School was started by the practicing lawyers of the city, and at first drew off more than half the Harvard men. Since that date the new method has consistently gained ground, and was finally vindicated recently, when the Boston school, in self-preservation, adopted the system it was formed to oppose.

Yale and a few other schools cling to English methods, but for practical purposes it may be said that the "case" system is that of the United States.

The word is used only for convenience, but as the method is distinctive it is difficult to appreciate the American objection to its employment. The student, absolutely ignorant of law, is set down to a collection of cases, e. g., on contract, made by the professor and arranged in topics chronologically. There is no headnote or excursus. In every subject the same method is employed, the cases being selected, not for intrinsic authority but to illustrate the growth of principles. In this way admirable collections have been made, such as Professor Ames's (of Harvard) on trusts and Professor Kirchway's (of Columbia) on mortgages.

The student prepares a certain number of cases, endeavoring to discover their meaning, and assisting his preparation by reference to text-books. In class the professor calls on some one to give a verbal synopsis of the case. Discussion follows, the professor calling on various students, and endeavoring to elicit all the law which the case can suggest. Classes are large, few can take active part in any one, but the constant question and answer and the necessity for personal thought keep interest keen. A wonderful amount of law is evolved from an apparently unfertile example, and principles so dug out leave an almost ineffaceable impression. It is in this system that the American student finds his substitute for work in chambers.

The personal qualities demanded from the teacher are very high. "Some one's bound to be tired after a class," said Professor Ames; "if it isn't the teacher, it's

Digitized by Google

the students." Applied to some branches this catechetical method is exceedingly difficult. It is, of course, impossible to hurry on. The full course must be taken to pursue the method over all the essential subjects. In exceptional cases brilliance may be retarded, but for the mass nothing can be conceived more stimulating or a more valuable professional training.

These two points must be emphasized when any question arises of application to England: That the catechetical system is only practicable when three years are devoted exclusively to law, and when professional success is substituted for examination success as the goal in the mind of teacher and taught.

It is believed that a drawback to the "case" system pure is the possibility of legal disgust in the mind of the novice set down to the study of apparently insignificant illustrations, and the loss of time consequent on an insufficient grasp of elementary facts of legal procedure and coherency. In most law schools Harvard methods have been modified after adoption by a preliminary course of lectures and reading in legal principles and practice. Time is saved and a true conception results more easily, I think, in this way.

The "elective system," though practically universal, is not in law of much practical importance. The time is so short and the necessary courses so many that the student's choice is confined within small limits. Specialization is, however, assisted materially thereby.

Practice courts at many schools receive much prominence. The system has been most fully developed at Michigan by Professor Hutchins and Professor Bogle, where, in one course, transactions previously arranged by the professor are conducted by students in such a manner as to leave doubtful both facts and law. There is advice on evidence, delivery of pleadings, and trial in due form. It is certainly the fact that throughout exist gravity and seriousness. Personally I should be inclined to call the elaboration a disproportionate expenditure of time, but students certainly acquire thereby a minute knowledge of procedure. Similar practical methods are in use for conveyancing.

Moot clubs, study clubs, and law clubs exist in connection with almost every school. Their value is great. The student breathes an atmosphere of law which induces all the keenness that tradition and opinion arrogate to it.

The arrangement of subjects calls for no special remark. To grade them to some extent is usual, e. g., contracts come early and trusts late. But these matters are of relative unimportance, though considerable ingenuity is shown in the combinations of courses. * * *

In the United States there are very many universities, almost all with a law school. In addition, there are public or private law schools of size in all the large towns. The revival of law in England is only recent, and now a very little is being done. Our provincial law students' societies are often admirable, but it is not well that students should have to work out their salvation quite alone and be unable, usually, to obtain any systematic legal instruction. The law society's scheme, just started, is a forward step, but shows little sign, and, indeed, is constitutionally unable to go far in the direction of providing thorough and scientific legal education. That is not within its scope under present conditions.

It is to the £120,000 in the hands of the attorney-general and to the schemes of the University of London that I wish to direct the results of American experience. The lectures of the inns of court are no doubt intrinsically valuable and capably conducted. But as legal education they are not merely useless but damaging, for they create the impression that by them bar students are fitted for their profession. Their effect is to lull the legal conscience of those responsible for providing legal education and of those desirous of receiving it. They suggest incompletely trains of thought which followed lead to success at bar examinations. To these examinations they are directed, and a thoughtful mind may discern in them "a collateral relation-

Digitized by Google

ship" to legal education. But for the average student they are neither systematic nor adequate, and in effect misleading. From the English bar and the council of legal education some better thing is expected.

To my mind, the American system, recognized as the most adequate invented for teaching law as a profession, suggests the following course, which I respectfully submit for their consideration:

A central school of law should be established in London, with a minimum three years' course, conducted by professors who have been successful practicing lawyers and possess, in addition, suitable scholarly qualifications. Daily attendance should be demanded similar to that at Oxford and Cambridge, examinations held frequently (say three times a year), and a degree granted on the results of all previous examinations. The instruction should be in scientific law, but adapted to professional standards. The standard of admission should be that of an entrance scholarship examination at Oxford, with a liberal choice of subjects, and the aim to combine education with professional efficiency—an efficiency which should include scientific as well as practical knowledge of law.

Graduates could suitably but not necessarily be excused all bar or law society's examinations precedent to the final. Other conditions for a call to the bar need in no particular be changed, nor would the inns of court forfeit any control over their members. Students attending the school and intending to become solicitors should count their three years of attendance against that period of their articles. The entrance examination should have the effect of matriculation at London University in reducing the articles by a year. Consequently a graduate would have but one year's articles to serve subsequently. To a certain extent, the later courses should be elective, so as to provide for imperial as well as English needs.

Fees should be as low as possible, and no residential qualification be demanded. Adequate reference and lending libraries for the use of both teachers and students should be provided. The lending portion is the more important, as the inns of court and the law society's libraries are available for their members.

The constitution of the school would be regulated by the financial considerations of its inauguration. But that the inns of court, the law society, London University, and the Clifford's Inn Trustees could not provide or procure adequate funds for the purpose of a beginning is incredible; that these bodies, proud as they may be of their traditions and responsibilities, would not be too proud to deny satisfaction to the great need that exists is, to my mind, certain. A joint board of trustees, a joint council supervising the operations of the faculty, is an idea not too subtle to assume practical form from a display of legal ingenuity far less profound than is required to prove its impossibility.

Considering the example of America in systematic instruction, the conjunction of opportunities now awaiting seizure, the concourse arrived or available of eager students from every part of the Empire, some step must surely be taken. The importance, national and international, of scientific legal education can hardly be exaggerated. It fortifies the Empire by the spread of political knowledge. It induces international amity by the advancement of fundamental aims. It will do more to promote these ends than a hundred treaties. By substantial unity of ideal, not by irrelevant divergences of practice, we may best measure the possibilities of intelligent national cooperation. (Pp. 194–197.)

REQUIREMENTS FOR THE PRACTICE OF MEDICINE.

The laws of the various States mention certain requirements in order to practice medicine, and in some States the medical examining boards are allowed to make additional regulations, particularly as to what medical schools shall be regarded as reputable and under what conditions the licenses of other States shall be recognized.

Digitized by Google

The regulations here given have been obtained mainly from the published statutes of the various States, and are brought down to as late a date as possible (some of them for the year 1905), but frequently the statutes are not published until several months after the adjournment of the State legislatures. For this reason, and on account of the frequent changes made in the requirements, the name of the secretary of a State medical board in each State has been given, to whom application for information may be made by persons desiring medical licenses.

It has not been considered necessary to mention the usual requirements that the applicant for a license shall be 21 years of age and shall have a good moral character.

The laws of many of the States provide for the recognition of licenses of other States under certain conditions, but frequently the medical boards have not made satisfactory arrangements for such interchange of licenses.

A.—Classification.

The requirements may be arranged in six groups, as follows:

I. Examination, diploma of a recognized medical college, and a certain amount of general education, are required in Delaware, Louisiana, Maryland, Michigan, New Hampshire, New Jersey, New York, Ohio, Pennsylvania, South Carolina, and Wisconsin—11.

II. Examination and a diploma of a recognized medical school are required in California, District of Columbia, Florida, Georgia, Idaho, Illinois, Indiana, Iowa, Kentucky,[a] Maine, Montana, Nebraska, North Carolina, North Dakota, Oklahoma, the Philippines, Porto Rico, South Dakota, Utah, Vermont, Washington, and Wyoming—22.

III. Examination and medical diploma are required in Arizona,[b] Connecticut, Virginia, and Rhode Island—4.

IV. Examination only is required in Alabama,[c] Arkansas, Hawaii, Kansas,[d] Massachusetts, Minnesota,[d] Mississippi, Missouri, Oregon, Tennessee, Texas, and West Virginia—12.

V. Examination or recognized diploma is required in Colorado, Indian Territory, and Nevada—3.

VI. Diploma of a recognized medical school is required in New Mexico—1.

B.—Brief Synopsis.

Alabama.—An examination is required before the State board of medical examiners or an examination and a recognized diploma before one of the county boards (fee $10). No examination in major surgery is required if such branch is not to be practiced. (Law as amended February 26, 1903.) Chairman of State board of medical examiners, Dr. W. H. Sanders, Montgomery, Ala.

Alaska.—No requirement except the payment of a license fee by itinerant physicians.

Arizona.—The requirements are (1) a medical diploma, (2) an examination, and (3) residence in Arizona. No provision for accepting licenses of other States. Fee $10 in addition to $2 at time of making application. (Act approved March 19, 1903.) Secretary, Dr. Ancil Martin, Phoenix, Ariz.

Arkansas.—An examination only is required (fee $10). No provision for recognition of certificates of other States. (Acts of February 17 and March 24, 1903.) Secretary, Dr. J. P. Runyon, Little Rock, Ark.

California.—An examination is required and the applicant must have graduated

[a] But students of Kentucky medical colleges graduating prior to September 1, 1907, and making application for a license prior to January, 1908, shall be licensed without examination.

[b] And residence in Arizona.

[c] But if the examination is before a county board, a diploma of a recognized medical college is also required.

[d] And attendance on four courses of lectures.

Digitized by Google

from a medical college having requirements equal to those prescribed by the Association of American Medical Colleges. Fee $20. The certificates of other States with equal standards may be accepted. (Act of February 27, 1901.) Secretary, Dr. Charles L. Tisdale, Alameda, Cal.

Colorado.—All applicants for a license must pass an examination or must possess such educational qualifications as the State board of medical examiners may deem necessary: "*Provided, however*, That at no time shall said schedule for graduates after January 1, 1900, specify the attendance upon less than four full courses of instruction in four separate years in a reputable medical school." The board requires that all applicants exempted from examination shall be graduates of recognized medical colleges, and in order to be recognized by the board a medical college must require for matriculation graduation from a high school having a four years' course, or equivalent preliminary attainments, the number of hours of instruction in the four medical terms must not be less than 3,600, and there must be ample laboratory and hospital facilities. Each applicant must pay a fee of $25, two-fifths of which are returned if the license is not granted. (Act approved April 20, 1905.) Secretary, Dr. S. D. Van Meter, 1723 Tremont street, Denver, Colo.

Connecticut.—The requirements are an examination and a diploma of a legally incorporated college (fee $15). Certificates issued by other State boards may be accepted. (General Statutes, revision of 1902, and act of 1903.) Secretary, Dr. C. A. Tuttle, New Haven, Conn.

Delaware.—An applicant for a license must have a competent common school education and a diploma from a medical college, must have studied medicine four years and taken three regular courses of lectures prior to graduation, and must pass an examination (fee $10, which shall be returned in case of failure to pass the examination). The certificates of other States with equal standards may be accepted (fee in such cases being $50). (Acts of April 18, 1895, and March 16, 1899.) Secretary, Dr. P. W. Tomlinson, Wilmington, Del.

District of Columbia.—The requirements are an examination and a medical diploma after study of medicine three years if the diploma was granted prior to June 30, 1898, or four years if granted after that date (fee $10). Certificates of other States may be accepted under certain conditions. (Act of June 3, 1896.) Secretary, Dr. W. C. Woodward, Washington, D. C.

Florida.—Examination and diploma of a recognized medical college (fee $10). No provision for recognition of certificates of other States. (Acts of May 17, 1895, and May 4, 1899.) Secretary, Dr. J. D. Fernandez, Jacksonville, Fla.

Georgia.—Examination and graduation from a medical school requiring not less than three courses of six months each (fee $10); but not more than two courses shall be required of anyone who graduated prior to April 1, 1895. Certificates of other States may be accepted. (Acts of December 12, 1894, and August 13, 1904.) Secretary, Dr. F. D. Patterson, Cuthbert, Ga.

Hawaii.—Licenses are granted after examination (fee $10). No provision for the acceptance of certificates of other State examining boards. (Revised Laws, 1905.) Dr. C. B. Wood, Honolulu, Hawaii.

Idaho.—The requirements are a diploma from a college of medicine in good standing and an examination (fee $25). (Act of March 3, 1899.) Secretary, Dr. J. L. Conant, jr., Genesee, Idaho.

Illinois.—An examination and a diploma of a recognized medical college (fee of $10 is charged for examination, and $5 for a certificate if issued). Certificates of other States may be accepted. (Rev. Stat., 1899.) Secretary, Dr. J. A. Egan, Springfield, Ill.

Indian Territory.—An examination is required (fee $10), or a diploma of a recognized medical college (fee $1), but no diploma issued after July 1, 1904, shall be approved unless issued by a medical college requiring for admission an examination

Digitized by Google

in all the common branches and the higher mathematics, and requiring an attendance on four courses of at least six months each in separate calendar years. No provision for reciprocity of licensure. (Act of Congress approved April 23, 1904.) Secretary for central district, Dr. B. W. Caldwell, Hugo, Ind. T.

Indiana.—Diploma of a reputable medical college and an examination (fee $25). Certificates of other States may be accepted. Secretary, Dr. W. T. Gott, Crawfordsville, Ind.

Iowa.—Examination and a diploma of a recognized medical college requiring attendance upon four courses of at least twenty-six weeks each (fee $10). Certificates of other States may be accepted (fee $50). (Annotated supplement to the Code, 1902, chapter 17; and amendment of March 15, 1904.) Secretary, Dr. J. F. Kennedy, Des Moines, Iowa.

Kansas.—Applicants who have studied medicine four periods of six months each are licensed after an examination (fee $15), or they may, in the discretion of the board, be licensed on a diploma of a reputable medical college (fee $10). Certificates of other States may be accepted. (Act of March 22, 1901.) Under date of March 20, 1903, the State board announced that, "No registration will be made on diplomas or certificates from other State boards." Secretary, Dr. G. F. Johnston, Lakin, Kans.

Kentucky.—Diploma of a reputable medical college and an examination (fee $10), but "all students who are matriculated in any medical or osteopathic college in this Commonwealth on or before February 1, 1904, and shall have graduated prior to September 1, 1907, and make application to the board prior to January, 1908, shall receive certificates without examination." (Carroll's Statutes, 1903, chap. 85, art. 1, and amendment of 1904.) Secretary, Dr. J. N. McCormack, Bowling Green, Ky.

Louisiana.—The requirements are (1) "a fair primary education," (2) a diploma of a recognized medical college, and (3) an examination. The fee for examination is $10, one-half to be returned if no certificate is granted, and there is an additional fee of $1 for a certificate. No provision for recognizing licenses of other States. (Act approved July 4, 1894.) Secretary, Dr. F. A. Larue, 624 Gravier street, New Orleans, La.

Maine.—The requirements are a diploma of a recognized medical college and an examination (fee $10). Certificates of other States may be accepted. (Rev. Stat., 1903.) Secretary, Dr. Wm. J. Maybury, Saco, Me.

Maryland.—The requirements are (1) "a competent common school education," (2) a diploma from a medical college requiring a four years' course, or a diploma or license conferring full right to practice in some foreign country, and (3) an examination (fee $20). Certificates of other States may be accepted. (Act approved April 11, 1902.) Secretary, Dr. J. M. Scott, Hagerstown, Md.

Massachusetts.—Applicants for license must pass an examination (fee $20). No provision for recognizing certificates of other States. (Revised laws, January 1, 1902.) Secretary, Dr. E. B. Harvey, State House, Boston, Mass.

Michigan.—The applicant for a certificate shall (1) have "a diploma from a recognized and reputable high school, academy, college, or university having a classical course," or shall pass a preliminary examination; and (2) he shall be a graduate of a recognized medical college having at least a four years' course of seven months each; and (3) he shall pass an examination. The fee is $25, except to graduates of an approved medical school in Michigan, who pay $10 only.[a] Certificates of other States may be accepted. (Act approved June 9, 1903.) Secretary, Dr. B. D. Harison, Sault Ste. Marie, Mich.

Minnesota.—The requirements are attendance at a recognized medical college during four full courses of twenty-six weeks each, no two courses in the same year, and an examination (fee $10). Provision for recognition of other State licenses. (Acts

[a] Students registered in approved medical colleges of Michigan on January 1, 1905, shall not be required to stand the examination.—Amendment of June, 1905.

Digitized by Google

of April 22, 1895, and April 18, 1905.) Secretary, Dr. C. J. Ringnell, Andrus Building, Minneapolis, Minn.

Mississippi.—An examination is required (fee, $10.25). (Chapter 104, Annotated Code of 1892.) Secretary, Dr. J. F. Hunter, Jackson, Miss.

Missouri.—The requirements are satisfactory preliminary qualifications and an examination (fee $15). Provision for recognizing the certificates of other States. But students matriculated prior to March 12, 1901, shall be granted a license on presentation of a diploma of any medical college of Missouri (fee $15). (Law as amended April 10, 1905.) Secretary, Dr. W. F. Morrow, Kansas City, Mo.

Montana.—The requirements are an examination (fee $15), and a diploma of a recognized medical college, and if graduated since July 1, 1898, attendance upon four courses of at least six months each. Certificates of other States may be accepted. (Act of February 23, 1903.) Secretary, Dr. Wm. C. Riddell, Helena, Mont.

Nebraska.—An examination and diploma of a medical school in good standing, and which requires a preliminary examination for admission and attendance on four courses of six months each, but the requirement of four years shall not apply to those who graduated prior to August, 1898. Fee for a license to graduates of medical colleges in Nebraska $10, to all others $25. (Cobbey's Annotated Statutes, 1903, secs. 9416–9433.) Secretary, Dr. George H. Brash, Beatrice, Nebr.

Nevada.—Certificates are granted to graduates of recognized medical colleges; also to graduates of other medical colleges who pass a satisfactory examination. Fee for certificate $25. Secretary, Dr. S. L. Lee, Carson City, Nev.

New Hampshire.—The requirements are a high school education, attendance on four courses of at least six months each in a registered medical school, graduation from a registered medical school or a license to practice in some foreign country, and an examination (fee $10). Certificates of other States having equal standards may be accepted. (Act of 1897 as amended April 2, 1903.) Holders of diplomas of Dartmouth Medical College issued between the enactment of the medical law in March, 1897, and January 1, 1903, may receive a license on presentation of the diploma. Secretary, Dr. Henry C. Morrison, Concord, N. H.

New Jersey.—The requirements are (1) graduation from a high school having a course of four years, or an equivalent academic education; (2) graduation from a medical college recognized by the board, or a license to practice in some foreign country; (3) attendance upon four courses of at least seven months each prior to receiving the medical degree, and (4) an examination (fee, $25). Applicants examined and licensed by, or who have been members of, examining boards of other States may be licensed without examination upon payment of a fee of $50. (Acts of 1894 and 1903.) Secretary, Dr. E. L. B. Godfrey, Camden, N. J.

New Mexico.—A license is granted on the diploma of a recognized medical school (fee, $25). Certificates of other States may be accepted. (Act of Mar. 12, 1903.) Secretary, Dr. D. B. Black, Las Vegas, N. Mex.

New York.—The applicant for a license must (1) have the general education required; (2) have attended four courses of at least six months each; (3) have graduated from a registered medical college or hold a license to practice in some foreign country, and (4) must pass an examination (fee, $25). Certificates of other States may be accepted. (Chap. 661, laws of 1893 as amended in 1901 and 1902.) H. J. Hamilton, education department, Albany, N. Y.

North Carolina.—An applicant for a license must (1) present a diploma of an approved medical college or a license to practice in some other State, and (2) pass an examination (fee, $10). (Act of 1899.) Secretary, Dr. G. W. Pressly, Charlotte, N. C.

North Dakota.—Attendance on four courses of eight months each, diploma of a recognized medical college, and an examination (fee, $20). Certificates of other States may be accepted. Secretary, Dr. H. M. Wheeler, Grand Forks, N. Dak.

Ohio.—High school education, graduation from a recognized medical college, or

Digitized by Google

license to practice in some foreign country, and an examination (fee, $25). Certificates of other States may be accepted. (Bates' Annotated Statutes, 1903.) Secretary, Dr. Frank Winders, Columbus, Ohio.

Oklahoma.—Graduation from a reputable medical college and an examination (fee, $5). (Act of Mar. 12, 1903.) Secretary, Dr. J. W. Baker, Enid, Okla.

Oregon.—An examination is required (fee, $10), but applicants who have been licensed in other States after examination may be excused from examination. (Act approved Feb. 17, 1903.) Secretary, Dr. Byron E. Miller, Portland, Oreg.

Pennsylvania.—The requirements are (1) a competent common school education; (2) medical diploma (if granted after July 1, 1895, holder must have studied medicine four years and attended three courses of lectures) or license to practice in some foreign country, and (3) an examination (fee, $25). Certificates of other States with equal standards may be accepted (fee, $15). (Act of May 18, 1893.) Secretary, Dr. N. C. Schaeffer, Harrisburg, Pa.

Philippines.—Diploma of a recognized medical college and an examination (fee, $15). (Act of Dec. 4, 1901.) Secretary, Dr. R. E. L. Newberne, Manila, P. I.

Porto Rico.—Diploma of a recognized medical college and an examination (fee, $25). Certificates granted by State boards after examination may be accepted. Secretary, Dr. Quevedo Baez, San Juan, P. R.

Rhode Island.—A certificate may be granted "to any reputable physician" who passes a satisfactory examination (fee for the examination, $10, "and not more than $2 shall be charged for a certificate"). (Law as amended Nov., 1901.) Secretary, Dr. G. T. Swarts, Providence, R. I.

South Carolina.—An examination is required, and to be eligible to examination the applicant must have a preliminary education equivalent to the possession of a teacher's first-grade certificate and, unless graduated prior to March 4, 1905, must have attended four courses of at least twenty-six weeks each before graduation. Certificates of other States with equal standards may be accepted. Fee for examination, $10, one-half of which shall be returned if a certificate is not granted. (Act of Mar. 4, 1905.) Secretary, Dr. W. M. Lester, Columbia, S. C.

South Dakota.—An applicant must present a diploma from a recognized medical college which requires attendance on four full courses of six months each and must pass an examination (fee, $20). Certificates of other States may be accepted. (Act approved Mar. 5, 1903.) Secretary, Dr. H. E. McNutt, Aberdeen, S. Dak.

Tennessee.—An examination is required (fee, $10, and $5 additional for the certificate, if granted). Certificates of other States not accepted. (Act approved Apr. 22, 1901.) Secretary, Dr. T. J. Happell, Trenton, Tenn.

Texas.—An examination is required (fee, $15). Certificates of other States with equal standards may be accepted. (Act approved Feb. 22, 1901.) Secretary, Dr. Thomas T. Jackson, San Antonio, Tex.

Utah.—A diploma of a recognized medical college and an examination are required (fee, $15). (Act of 1894.) Secretary, Dr. R. W. Fisher, Salt Lake City, Utah.

Vermont.—A diploma of a medical college recognized by the board and an examination are required (fee, $15), but certificates of other States with equal requirements may be accepted without examination. (Public acts of 1904.) Secretary, Dr. W. Scott Nay, Underhill, Vt.

Virginia.—An examination and a medical diploma are required (fee, $10). The board may, in its discretion, accept a medical diploma and a certificate granted, after examination, by another State board. (Pollard's Annotated Code, 1904, sec. 1747.) Secretary, Dr. R. S. Martin, Stuart, Va.

Washington.—An applicant must pass an examination (fee, $25), and must have graduated from a medical college having at least a four years' course. Certificates of other States not accepted. (Act of Feb. 18, 1901, amended in 1905.) Secretary, Dr. C. W. Sharples, Seattle, Wash.

Digitized by Google

West Virginia.—An applicant for a license must pass an examination (fee, $10). Secretary, Dr. Hugh A. Barbee, Point Pleasant, W. Va.

Wisconsin.—To secure a license the applicant must pass an examination and must be a graduate of a reputable medical college requiring at least four courses of seven months each in separate calendar years and "a preliminary education equivalent to that necessary for entrance to the junior class of an accredited high school, including a one year's course in Latin, and that shall after the year 1906 require for admission to such school a preliminary education equivalent to graduation from an accredited high school of this State." The examination fee shall not exceed $15, with $5 additional for a license issued. Any person licensed by another State board requiring an equal standard and holding a diploma from a reputable medical college may be licensed without examination on payment of a fee not exceeding $25. (Act approved May 22, 1903.) Secretary, Dr. F. A. Forsbeck, 121 Wisconsin street, Milwaukee, Wis.

Wyoming.—Every applicant for a certificate must be a graduate of a regularly chartered medical college recognized by the State board of health or the State board of medical examiners of the State in which it is located, and he shall pass an examination (fee, $25). Certificates of other States with equal standards may be accepted. (Act approved Feb. 15, 1905.) Secretary, Dr. S. B. Miller, Laramie, Wyo.

REQUIREMENTS FOR THE PRACTICE OF DENTISTRY IN THE UNITED STATES.

A.—Classification.

I. An examination, a diploma of a recognized dental school, and a high school education are required in New Jersey, New York, and Pennsylvania—3.

II. An examination and a diploma of a recognized dental school are required in Arizona, California, Colorado, Connecticut, Delaware, Florida, Georgia, Hawaii, Illinois,[a] Indiana, Iowa, Louisiana, Minnesota, Missouri, Montana,[b] Nebraska,[b] Nevada, New Mexico, Oregon, Porto Rico, Utah, Washington, Wisconsin, and Wyoming—24.

III. An examination and a dental diploma are required in Idaho,[c] Kentucky, Maryland, Ohio, South Dakota,[d] and the Philippines—6.

IV. An examination only is required in Alabama, District of Columbia, Maine, Massachusetts, Mississippi,[e] New Hampshire, North Carolina, North Dakota,[c] Oklahoma, Rhode Island, South Carolina, Texas, Vermont, Virginia, and West Virginia—15.

V. An examination or a recognized diploma is required in Arkansas, Kansas, Michigan, and Tennessee—4.

B.—Brief Synopsis.

Alabama.—An examination is required (fee, $10). Certificates of other States not accepted. (Act of March 4, 1901.) Secretary, Dr. T. P. Whitby, Selma, Ala.

Alaska.—No regulation.

Arizona.—An examination is required (fee, $25).

---

[a] If applicant is not a graduate of a recognized dental school, he must have graduated from a reputable medical school, or have practiced dentistry five years.

[b] If applicant is not a dental graduate, he must have studied or practiced dentistry five years.

[c] If applicant is not a dental graduate, he must have had three years' experience in a dental office.

[d] But the law of South Dakota requires that the applicant must have studied or practiced dentistry three years.

[e] A high-school education is also required.

Digitized by Google

"SECTION 6. No person shall be eligible for examination by the Territorial board of examiners who shall not—

"First. Furnish satisfactory evidence of having graduated from a reputable dental college of the United States of America, which must be a member of the National Association of Dental College Faculties.

"Second. Or who shall have graduated from a high school or similar institution of learning in this Territory or some other State or Territory of the United States, requiring a four years' course of study, and who can furnish to the board of dental examiners an affidavit containing his or her name, the name of his or her preceptor, and the names of at least two reputable witnesses, certified to before a notary public, showing that he or she has completed an apprenticeship of three years of twelve months each with a licensed practitioner of dentistry; or

"Third. Can furnish to said board of dental examiners a certificate from the State board of dental examiners, or similar body of some other State or Territory in the United States, showing that he or she has been a licensed practitioner of dentistry in that State or Territory for at least five (5) years." (Act of March 17, 1903.) President, Dr. William G. Lentz, Phoenix, Ariz.

Arkansas.—To secure a license to practice dentistry the applicant must pass an examination (fee, $5), but if a diploma of a reputable dental college is presented to the board it may, in its discretion, excuse the applicant from an examination. No provision for recognizing licenses of other States. (Act of May 23, 1901.) Secretary, Dr. A. T. McMillen, Little Rock, Ark.

California.—The applicant for a license must pass an examination. (Fee, $25). "No person shall be eligible for examination by the State board of dental examiners who shall not furnish satisfactory evidence of having graduated from a reputable dental college, which must have been indorsed by the board of dental examiners of California; or who shall not have graduated from a high school or similar institution of learning in this or some other State of the United States, requiring a three years' course of study, and who can not furnish to the board of dental examiners an affidavit containing his or her name, the name of his or her preceptor, and the names of at least two reputable witnesses, certified to in the State of California before a notary public, showing that he or she has completed an apprenticeship of four years of twelve months each with a licensed practitioner of dentistry in the State of California, or can not furnish to said board of examiners a certificate from the State board of dental examiners, or similar body of some other State in the United States, showing that he or she has been a licensed practitioner of dentistry in that State for at least five years." (Acts approved March 23, 1901, and March 20, 1903.) Secretary, Dr. C. A. Herrick, Jackson, Amador County, Cal.

Colorado.—The requirements are a diploma from some reputable dental college and an examination. (Fee, $10.) (Act of April 17, 1897.) Secretary, Dr. M. S. Fraser, 407 Mack Building, Denver, Col.

Connecticut.—"Every applicant for a license must be examined" (fee, $25), and "no license shall issue to any person unless he shall have received a diploma or other sufficient certificate of graduation from some reputable dental college, or medical college, conferring a dental degree, having a department of dentistry, and recognized by the National Association of Dental Examiners, or unless he shall have spent five years under the instruction of a licensed or registered dentist, or unless he shall have had at least three years' continuous practice as a legally qualified dentist.

"The dental commissioners may, in their discretion, without examination, issue a license to any reputable dentist of good moral character, who shall have been in legal practice for five years or more in some other State or Territory, upon the certificate of the board of examiners, or a like board of the State or Territory in which such dentist was a practitioner, certifying to his competency, and that he is a repu-

Digitized by Google

table dentist of good moral character, and upon the payment of a fee of $25 to said commissioners." (Act approved June 15, 1905.) Recorder, G. M. Griswold, Hartford.

Delaware.—An examination is required (fee, $10; and $1 for a certificate, if granted). The by-laws of the board of examiners require the applicant to be a graduate of a recognized dental college. (Acts of March 31, 1885, and March 23, 1899.) Secretary, Dr. C. R. Jefferis, Wilmington, Del.

District of Columbia.—A certificate is granted to any one who passes a satisfactory examination. Fee for examination, $10; and for a certificate, $1. The certificate of another dental board may be accepted after the holder has been engaged in the practice of dentistry for five years. (Acts of June 6, 1892, and February 5, 1904.) Secretary, Dr. Sheldon G. Davis, 607 Thirteenth street N W., Washington, D. C.

Florida.—A diploma of a reputable dental college and an examination are required (fee, $10). Certificates of other States may be accepted. (Rev. Stat., 1892, sec. 829.) Secretary, Dr. W. G. Mason, Tampa, Fla.

Georgia.—The requirements for a license are (1) an examination and (2) a diploma from a dental school having a curriculum equal to those of the majority of dental schools in the United States, or a license from some other State board (fee $10). (Supplement to the code, 1901.) Secretary, Dr. D. D. Atkinson, Brunswick, Ga.

Hawaii.—A certificate is granted to any graduate of a reputable dental college who passes an examination (fee, $20). (Act approved April 25, 1903.) Secretary, Dr. M. E. Grossman, Honolulu, Hawaii.

Idaho.—An examination is required (fee, $25), and in addition the applicant must have a dental diploma or a certificate from some other State board, or must have three years' experience in a dental office. (Act of February 16, 1899.) Secretary, Dr. C. E. M. Loux, Pocatello, Idaho.

Illinois.—An examination is required of all applicants, and in addition the applicant must be a graduate of a recognized dental college or of a reputable medical school, or must have been engaged in the actual lawful practice of dentistry in some other State or country for five consecutive years immediately prior to the application, and must have the necessary qualifications prescribed by the board. The fee for the examination is $20, and for the license $5 additional. (Act of 1905.) Secretary, Dr. J. G. Reid, 1204 Trude Building, Chicago, Ill.

Indian Territory.—No information of any regulation in this Territory.

Indiana.—The requirements are (1) an examination (fee, $20) and (2) a diploma of a dental college recognized by the National Association of Dental Faculties, or affidavits "that the applicant has been an assistant in the dental office of a reputable licensed dentist or dentists of this State for a period of time not less than five years." Certificates of other States may be accepted. (Acts of 1899 and 1903.) Secretary, Dr. F. R. Henshaw, Middletown, Ind.

Iowa.—The requirements are a diploma from a recognized dental college and an examination (fee, $20). (Act of April 16, 1900.) Secretary, Dr. E. D. Brower, Lemars, Iowa.

Kansas.—An examination is required (fee, $10) or a diploma of a reputable dental college recognized by the board (fee, $5). "Residents of this State only shall be eligible for registration." No provision for recognizing certificates of other States. (Act approved February 24, 1903.) Secretary, Dr. M. I. Hults, Hutchinson, Kans.

Kentucky.—An examination and a dental diploma are required (fee, $20). Certificates of other States not recognized. (Act approved March 17, 1904.) Secretary, Dr. C. R. Shacklette, Louisville, Ky.

Louisiana.—The applicant for a certificate to practice dentistry, according to the board's "Rules for conducting dental examinations," must be a graduate of a recognized dental school and must pass an examination (fee, $25). (Act 88 of 1900.) Secretary, Dr. L. A. Hubert, 137 Carondelet street, New Orleans, La.

Maine.—An examination is required for a license (fee, $20). No provision for recog-

Digitized by Google

nition of certificates of other States. (Rev. Stat., 1903.) Secretary, Dr. D. W. Fellows, Portland, Me.

Maryland.—Any graduate of a dental school in the United States may be examined, and if found qualified shall be given a certificate; but any graduate of a regular dental school may be registered without examination in the discretion of the board. It is understood, however, that the board requires all applicants to be examined. A fee of $10 shall be paid by every applicant for examination and registration. (Act approved April 4, 1896.) Secretary, Dr. F. F. Drew, 701 North Howard street, Baltimore, Md.

Massachusetts.—An examination is required for a certificate (fee $20). No provision for recognizing certificates of boards of other States. (Revised laws of Massachusetts, 1902, chap. 76.) Secretary, Dr. G. E. Mitchell, Haverhill, Mass.

Michigan.—A certificate is granted after examination (fee $10), or to anyone holding a diploma from a reputable dental college having a course of instruction and practice equal to that of the college of dentistry of the University of Michigan (fee $3). Certificates of other States may be accepted. Secretary, Dr. Charles H. Oakman, 29 State street, Detroit, Mich.

Minnesota.—An examination and a diploma of an approved dental college (fee $10). No provision for recognition of certificates of other State boards. (Laws of 1889, chap. 19.) Secretary, Dr. F. S. James, Winona, Minn.

Mississippi.—A high school education and an examination are required (fee $10). (Act of March 16, 1904.) Secretary, Dr. P. P. Walker, Brandon, Miss.

Missouri.—Any person who has been licensed by the dental board of another State, or who has received a diploma from a reputable dental school recognized by the State dental board, and which has a course of instruction of not less than three terms of thirty weeks each in separate academic years, shall have the right to apply for examination (fee $10), and if successful in the examination shall be licensed. (Act approved April 12, 1905.) Secretary, Dr. S. C. A. Rubey, Clinton, Mo.

Montana.—An examination is required (fee $25). "To be eligible for such examination the applicant shall give satisfactory evidence of having practiced dentistry five years, or having been a bona fide student five years, under immediate supervision of a licensed dentist, or shall present a diploma from some reputable dental college." (Act approved February 25, 1901.) Secretary, Dr. D. J. Wait, Helena, Mont.

Nebraska.—"It shall be unlawful for any person to engage in the practice of dentistry in the State of Nebraska unless such person shall have obtained a license from the State board of health, countersigned by its dental secretaries" (five of them, appointed for five years each). The secretaries shall examine all applicants for licenses.

"SEC. 12. [Qualifications.] No person shall be eligible for examination for permanent license by said dental secretaries who shall not furnish satisfactory evidence of having graduated from a reputable dental college, the term 'reputable' to be understood as defined by section 13 of this act, which college shall have been indorsed and adjudged reputable by the State board of health, or who shall not have graduated from a high school or similar institution of learning in this or some other State of the United States requiring a four-year course of study, and furnished to the dental secretaries an affidavit containing his or her name, the name of his or her preceptor, and the names of at least two reputable witnesses, sworn to before a notary public in the State of Nebraska, showing that he or she has completed an apprenticeship of five years of twelve months each, with a licensed practitioner of dentistry in the State of Nebraska, or who shall not furnish to said dental secretaries a certificate from the State board of dental examiners, or similar body, of some other State of the United States, showing that he or she has been a licensed practitioner of dentistry in that State for at least five years just previous."

Digitized by Google

Section 13 defines a reputable dental college as one that in the opinion of the secretaries "fully meets the requirements of the National Association of Dental Examiners," and whose "standards as to entrance, course of instruction, and requirements for graduation are such that they would recommend it for recognition by the other dental colleges in the United States." Fee for a license, $25; but to graduates of Nebraska dental colleges the fee shall be $10. (Act approved February 28, 1905). Secretary, Dr. D. A. Meese, Auburn, Nebr.

Nevada.—An examination is required (fee $25, not returnable), and no one shall be eligible for examination unless he shall have graduated at a dental school recognized by the board, or shall have graduated at a high school having a three years' course of study, and have completed an apprenticeship of four years of twelve months each with a licensed dentist in the State of Nevada, or unless he has been a licensed dentist in another State for at least five years. (Act approved March 16, 1905). Secretary of board of examiners, Dr. C. A. Coffin, Reno, Nev.

New Hampshire.—An examination is required (fee $10). (Public Statutes, 1901, chap. 134.) Secretary, Dr. A. J. Sawyer, Manchester, N. H.

New Jersey.—An examination is required (fee $25). No person shall be examined by said board unless he has received a high school education and a diploma from a dental school recognized by the board, or shall present the written recommendation of at least five licensed dentists of this State of five years' standing, certifying that he is qualified for such examination, or shall hold a diploma or license to practice in some foreign country and granted by some authority recognized by the board. Certificates of other States with equal standards may be accepted. (Acts of March 17, 1898, and March 22, 1901.) Secretary, Dr. Charles A. Meeker, Newark, N. J.

New Mexico.—An examination is required of each person applying for a certificate, "and such person shall present at the time of his examination either his diploma from a reputable dental college, or the affidavit of three reputable dentists within the Territory, of three years standing, certifying that such applicant is qualified to take such examination." Examination fee $5. (Act of February 23, 1893, as amended March 9, 1905.) Secretary, Dr. C. N. Lord, Santa Fe, N. Mex.

New York.—An examination is required (fee $25), the prerequisites being (1) an education equivalent to that of a four-year high school course, and (2) a diploma from a registered dental school or a license to practice in some foreign country. Certificates of other States with equal requirements may be accepted. (Dental law of March 28, 1901, as amended March 25, 1902.) Chief of examining division, board of regents, Charles F. Wheelock, Albany, N. Y.

North Carolina.—An examination is required (fee $10). (Act of 1887, as amended March 3, 1891.) Secretary, Dr. R. H. Jones, Winston-Salem, N. C.

North Dakota.—A license is granted to any one passing a satisfactory examination who has been practicing or studying dentistry under a licensed dentist for three years immediately preceding. While the board is authorized by law to grant a license to any graduate of a reputable dental college without examination, it requires an examination of all applicants. Fee for examination $10, and a further sum of $5 for a certificate. (Revised Code of North Dakota, 1895.) Secretary, Dr. H. L. Starling, Fargo, N. Dak.

Ohio.—A dental diploma and an examination are required (fee $20). Upon unanimous vote of the board, applicants holding a license from another State requiring a diploma and an examination may be excused from examination. (Acts of April 29 and May 10, 1902.) Secretary, Dr. H. C. Brown, 185 East State street, Columbus, Ohio.

Oklahoma.—An examination is required (fee $25). Certificates of other boards of dental examiners may be accepted. (Revised Statutes, 1903.) Secretary, Dr. A. C. Hixon, Guthrie, Okla.

Digitized by Google

Oregon.—A diploma from some reputable dental college and an examination are required (fee $10). "All dental colleges which are members of the National Association of Dental Faculties shall be deemed reputable and in good standing." (Act approved February 20, 1899.) Secretary, Dr. O. D. Ireland, Dekum Building, Portland, Oreg.

Pennsylvania.—The requirements for a dental license are (1) a competent common school education, (2) a diploma of a recognized dental school or a license to practice in some foreign country, and (3) an examination (fee $15). Applicants examined and licensed by other State examining boards having substantially the same standard of requirements may be licensed without an examination on payment of $10. (Act of July 9, 1897.) Secretary of dental council, N. C. Schaeffer, Harrisburg, Pa.

Philippine Islands.—The requirements are a dental diploma and an examination (fee $10). (Law of January 10, 1903.) Secretary, Dr. W. G. Skidmore, Manila, P. I.

Porto Rico.—A fair common-school education, a diploma from a reputable dental college, and an examination (fee $25). Dr. Manuel V. de Valle, San Juan, Bayamon, P. R., member of dental examining board.

Rhode Island.—An examination is required (fee $20). (Acts of 1897 and 1901.) Secretary, Dr. W. S. Kenyon, Providence, R. I.

South Carolina.—An examination is required (fee $15). (Code of South Carolina, 1902.) Secretary, Dr. B. Rutledge, Florence, S. C.

South Dakota.—An applicant for a license must (1) have pursued the study of dentistry for three years under a regular practicing dentist or must have practiced dentistry three years and (2) must pass an examination. A graduate of a reputable dental college may be licensed without examination, in the discretion of the board, according to the law, but the board requires all to pass an examination. The fee for the examination is $10 and for the license the further sum of $5. (Acts of March 7, 1901, and March 11, 1903.) Secretary, Dr. G. W. Collins, Vermilion, S. Dak.

Tennessee.—An examination or a diploma of a recognized dental school is required. Fee for each certificate issued, $5. (Code of 1896.) Secretary, Dr. F. A. Shotwell, Rogersville, Tenn.

Texas.—A certificate is granted to anyone who passes a satisfactory examination (fee $25). (Laws of 1905, chap. 97.) Secretary, Dr. C. C. Weaver, Hillsboro, Tex.

Utah.—An examination is required. To be eligible for examination the applicant must have studied dentistry three years under a licensed dentist, or practiced dentistry two years, or have a diploma from a reputable dental college recognized by the National Association of Dental Examiners. Fee for examination, $25, of which $20 shall be returned in case of failure to pass the examination. Certificates of other States may be accepted after the holder has been in legal practice for five years or more. (Acts approved March 12, 1903, and March 9, 1905.) Secretary, Dr. H. W. Davis, 513 McCormick Block, Salt Lake City, Utah.

Vermont.—An examination is required (fee $25). "The board of dental examiners may, without examination, issue a license to practice to any dentist who shall have been in legal practice in some other State or Territory for a period of at least five years upon the certificate of the board of dental examiners or a like board of the State or Territory in which such dentist was a practitioner, certifying his competency and that he is of good moral character, and upon the payment of twenty-five dollars." (Act approved November 29, 1904.) Secretary, Dr. G. F. Cheney, St. Johnsbury, Vt.

Virginia.—Certificates are granted after examination (fee $10). No provision for recognizing certificates of other State boards. (Acts of 1894 and 1898.) Secretary, Dr. R. H. Walker, Norfolk, Va.

Washington.—An applicant must be a graduate of a recognized dental college and must pass an examination (fee $25). (Act of March 18, 1901.) Secretary, Dr. C. S. Irwin, Vancouver, Wash.

Digitized by Google

West Virginia.—An examination is required (fee $10). No provision for recognizing certificates of other States. (Act of February 20, 1897.) Secretary, Dr. H. M. Van Voorhis, Morgantown, W. Va.

Wisconsin.—Licenses are granted after examination, but an applicant for examination must have graduated from a reputable dental college, or must have served as an apprentice to a reputable dentist for five years, or must have practiced dentistry for four years immediately preceding. The State Board may, in its discretion, license without examination any graduate of a reputable dental college recognized by the board and which requires four full courses of lectures of at least seven months each, and which requires for admission thereto a preliminary education equivalent to that required for entrance to the junior class of an accredited high school. Fee for each license granted, on examination or not, $10. (Act approved May 21, 1903.) Secretary, Dr. J. J. Wright, 1218 Wells Building, Milwaukee, Wis.

Wyoming.—The requirements are an examination and "a diploma of graduation of some reputable dental college recognized by the National Association of Dental Faculties." Examination fee, $25, in no case to be refunded. Certificates of other States and Territories with equal standards may be accepted. (Act approved February 21, 1905.) No information as to who has been appointed secretary.

CHAPTER XXVIII.

STATISTICS OF NORMAL SCHOOLS.

The statistics of the 269 public and private normal schools reporting to this Bureau for the year ending June, 1904, are given in detail in this chapter. In the regular training courses for teachers in these schools there were enrolled 63,627 students as compared with 64,114 the preceding year. In 1904 there were 10,848 graduates as compared with 9,927 in 1903.

There were 178 public normal schools reporting in 1904, an increase of one since the preceding year. In these schools there were 2,846 instructors as compared with 2,597 in 1903. The number of students had increased from 49,175 in 1903 to 51,635 in 1904. The number of graduates from public normal schools in 1904 was 9,230 as compared with 8,782 the preceding year.

The number of private normal schools reporting decreased from 109 in 1903 to 91 in 1904. In the same time the number of instructors decreased from 790 to 668, the number of students from 14,939 to 11,992, while the number of graduates increased from 1,145 in 1903 to 1,618 in 1904.

The following comparison with the statistics of 1890 will indicate the progress made by public and private normal schools in the fourteen years:

	1889–90.				1903–4.			
	Schools.	Instructors.	Normal students.	Normal graduates.	Schools.	Instructors.	Normal students.	Normal graduates.
Public normal schools	135	1,182	26,917	4,413	178	2,846	51,635	9,230
Private normal schools	43	274	7,897	824	91	668	11,992	1,618
Total	178	1,456	34,814	5,237	269	3,514	63,627	10,848

The growth of public normal schools has been constant since 1890, while the progress of private normal schools in the same time has been fluctuating. The latter reached the high-water mark in 1897, when there were 198 private normal schools with 24,181 students. For the last seven years there has been a gradual decline in number of schools and enrollment of students, although the quality of the work done by the remaining schools is undoubtedly superior to the average of 1897. Many of the weaker schools closed, while many others ceased to be distinctively normal schools, becoming private secondary schools or business schools.

In addition to the 269 public and private normal schools there were 951 other institutions in 1904 in which students were pursuing training courses for teachers. These included 230 universities and colleges, 449 public high schools, and 272 private high schools and academies. The following table shows the number and classes of institutions offering professional instruction to teachers, and the number of normal students in each class for the last four years:

Digitized by Google

Normal students reported for four years.

Classes of institutions.	1900–1901.		1901–2.		1902–3.		1903–4.	
	Institutions.	Students.	Institutions.	Students.	Institutions.	Students.	Institutions.	Students.
Public normal schools	170	43,372	173	49,403	177	49,175	178	51,635
Private normal schools	118	20,030	109	15,665	109	14,939	91	11,992
Public universities and colleges	34	3,019	39	3,003	37	2,997	34	2,765
Private universities and colleges	213	7,453	195	7,687	204	8,340	196	7,396
Public high schools	528	11,298	368	10,483	458	6,665	449	7,488
Private high schools	398	8,985	357	7,892	279	5,887	272	5,963
Grand total	1,461	94,157	1,241	94,133	1,264	88,003	1,220	87,239
In all public institutions	732	57,689	580	62,889	672	58,837	661	61,888
In all private institutions	729	36,468	661	31,244	592	29,166	559	25,351

The 10,848 graduates of public and private normal schools in 1904 comprised about 17 per cent of the number of students in these institutions for the year named. If the percentage of graduates of normal courses in other institutions was about the same, there must have been at least 15,000 trained teachers added to the teaching force of the country in 1904.

The distribution of normal students by States according to the classification in the above table will be found in Tables 19 and 20 of this chapter. Table 21 gives a list of universities and colleges offering professional instruction to teachers.

PUBLIC NORMAL SCHOOLS.

All the States and Territories excepting Delaware, Nevada, and Wyoming have public normal schools supported by taxation, direct or indirect. These three States make provision for the professional training of teachers in the State colleges.

An exhibit of the aggregate of State appropriations from year to year since 1890 will illustrate the growth of public normal schools in this country. For the school year ending June, 1904, the States paid $3,927,808 for the running expenses of their public normal schools, an increase of $345,640 over the preceding year. In addition the expenditure for new buildings reached $915,443. The following table gives a synopsis of appropriations for public normal schools for each year since 1889:

Public appropriations to public normal schools for fifteen years.

Year.	For support.	For buildings.	Year.	For support.	For buildings.
1889–90	$1,812,419	$900,533	1897–98	$2,566,132	$417,866
1890–91	1,285,700	409,916	1898–99	2,510,934	560,896
1891–92	1,567,082	394,635	1899–1900	2,769,003	718,507
1892–93	1,452,914	816,826	1900–1	3,068,485	709,217
1893–94	1,996,271	1,583,399	1901–2	3,228,090	906,301
1894–95	1,917,375	1,003,933	1902–3	3,582,168	1,268,742
1895–96	2,187,875	1,124,834	1903–4	3,927,808	915,443
1896–97	2,426,185	743,333			

Tables 1 to 11 summarize the statistics of the 178 public normal schools, while Tables 22 and 23 give in detail such information concerning these schools as could be collected by this Office.

The number of teachers in the 178 public normal schools engaged in the instruction of normal students for the year 1903–4 was 2,846, the number of male instructors being 1,145 and the number of women 1,701. There were 897 teachers wholly in other departments, making the total number of professors and teachers giving instruction in these institutions 3,743, the number of men being 1,291 and women 2,452.

Table 2 shows that there were 51,635 students in the normal departments of the 178 schools, 11,381 males and 40,254 females. There were 852 students in business courses and 5,393 in other courses of secondary grade. There were 20,981 in ele-

Digitized by Google

mentary grades, making an aggregate enrollment of 78,861, as shown in Table 3. The number of colored normal students was 2,072, the number of males being 792 and females 1,280, most of them being in normal schools for the colored race in the Southern States. Table 3 also shows that the number of children in the model schools connected with public normal schools was 50,692.

For the year ending June, 1904, the public normal schools had 9,230 graduates, 1,390 men and 7,840 women, as shown in Table 4. There were 122 graduates from business courses and 410 from other courses. Courses other than those for the professional training of teachers are not generally offered in public normal schools.

Only 149 of the 178 public normal schools made financial statements to this Office. The aggregate of $3,927,808 was received from public appropriations for support by 146 schools; 120 received $672,314 from tuition and other fees; 15 received $111,131 from productive funds, and 38 received $267,404 from sources not named. Nearly all of the latter sum was from public sources presumably. The aggregate income of 149 schools was $4,978,657 for the year.

The aggregate value of property possessed by 149 public normal schools was $26,914,525, as shown in Table 6. The libraries of 163 schools had an aggregate of 885,247 volumes, of an estimated value of $1,042,110. Ten schools had received benefactions during the year amounting to $489,015. Public appropriations aggregating $915,443 had been received by 46 normal schools for buildings and improvements.

Table 7 shows the annual appropriations for the support of the public normal schools of each State for the past six years, while Table 8 exhibits the appropriations for buildings and improvements for the same period.

Number and per cent of public normal students pursuing certain studies.

	Number of normal students.	Per cent of total number of normal students.	Male normal students.	Per cent of male normal students.	Female normal students.	Per cent of female normal students.

Practical pedagogy	13,530	26.20	2,037	17.81	11,493	28.55

The above table is a synopsis showing the number and per cent of the 51,635 normal students pursuing each of the nine leading branches of professional studies in the public normal schools of the United States. Tables 9, 10, and 11 give the summaries by States, giving the number of students by sex in each of the branches reported.

PRIVATE NORMAL SCHOOLS.

Tables 12 to 17, inclusive, are summaries of the statistics of the 91 private normal schools reporting to this Office, and are similar in form to Tables 1 to 6 for public normal schools. The total number of teachers employed in the private normal schools was 1,193, only 668 being teachers of normal students, while 525 were wholly employed in other departments.

Of the total enrollment of 34,215 in all departments of private normal schools, only 11,992 were in the normal department.

The aggregate income of 61 of the 91 private normal schools was $1,004,600, and 74 of the schools had libraries aggregating 203,522 volumes. The total value of property possessed by 67 of the schools was $5,798,973.

Digitized by Google

Table 18 makes a comparison between public and private normal schools, showing the percentage of male and female students, and percentage of graduates to total number in normal course in the two classes of institutions. In public normal schools only about 22 per cent of the students are males, while they comprise nearly 45 per cent in private normal schools. Nearly 18 per cent of the normal students of the public normal schools graduated in 1904, while less than 14 per cent graduated in the private normal schools.

The statistics of the 91 private normal schools are given in detail in Table 24.

TABLE 1.—*Summary of statistics of public normal schools in 1903-4.*

CHAPTER XXIX.

STATISTICS OF SECONDARY SCHOOLS.

In most of the State school systems the public schools are divided according to a well-devised scheme of studies into twelve grades. The first eight are known as the elementary grades, and the grades from nine to twelve inclusive are the secondary or high school grades. In one or two States all above the sixth grade are known as secondary grades, but generally the secondary school is the high school. The grades in private schools correspond very closely to the grades of the same number in public schools. Public secondary, or high schools, private high schools, academies and seminaries, and college preparatory schools maintain practically the same grades. The scheme of studies recommended by the committee of ten on secondary school studies to the National Educational Association in 1893 has become the model for all secondary, or high schools, public and private. The table which follows gives in condensed form the four courses of study recommended by that committee. The figure 1 indicates that the study is to be pursued a whole year, and the one-half limits the study to half a year. The notes explain the provisions for optional studies.

Secondary school studies recommended by the Committee of Ten (1893), showing time devoted to each study.

So far as could be ascertained by this Bureau the number of secondary students enrolled in all institutions in the United States for the year ending June, 1904, was 822,235, a gain of 45,600 over the preceding year, nearly all the increase being in the public high schools.

The secondary students reported for the two years were distributed among eight classes of institutions as follows:

Digitized by Google

Institutions.	1902–3.			1903–4.		
	Male.	Female.	Total.	Male.	Female.	Total.
Public high schools	245,771	346,442	592,213	266,089	369,769	635,808
Public normal schools	1,672	4,372	6,044	2,150	3,243	5,393
Public universities and colleges	7,552	2,603	10,155	8,835	2,768	11,603
Private high schools	50,434	51,413	101,847	51,599	51,808	103,407
Private normal schools	4,683	3,268	7,951	4,198	3,618	7,816
Private universities and colleges	29,749	13,890	43,639	30,073	14,555	44,628
Private colleges for women	.....	5,809	5,809	.....	4,800	4,800
Manual training schools	4,037	4,940	8,977	5,641	3,139	8,780
Total	343,898	432,737	776,635	368,535	453,700	822,235

The aggregate enrollment in the schools and colleges of the United States for the year ending June, 1904, was 17,896,890. In the elementary schools, public and private, the enrollment was 16,821,043. Of this number the public common schools had 15,620,230, while the estimated number in the private elementary schools was 1,200,813. It will be seen that the 822,235 secondary students comprise nearly 5 per cent of the aggregate enrollment in all the schools. The enrollment of secondary students in public and private institutions is given by geographical divisions for the two years mentioned in the following table, the percentage of increase or decrease being indicated:

Students receiving secondary instruction in public and private high schools and academies and in preparatory departments of colleges and other institutions.

	1902–3.			1903–4.			Per cent of increase or decrease.		
	Public.	Private.	Total.	Public.	Private.	Total.	Public.	Private.	Total.
United States	608,412	168,223	776,635	652,804	169,431	822,235	7.30	0.72	5.87
North Atlantic Division	198,843	51,751	250,594	211,304	51,477	262,781	6.27	a0.53	4.86
South Atlantic Division	32,879	24,255	57,134	36,039	23,970	60,009	9.61	a1.18	5.08
South Central Division	48,573	30,504	79,077	52,152	29,731	81,883	7.37	a2.53	3.55
North Central Division	286,143	49,119	335,262	304,439	51,751	356,190	6.39	5.36	6.24
Western Division	41,974	12,594	54,568	48,870	12,502	61,372	16.43	a0.73	12.47

a Decrease.

The number of secondary students in both public and private institutions in 1890 was 367,003, or about 5,900 to the million of population; in 1895 the number had increased to 539,712, or 7,900 to the million; in 1900 the number was 719,241, or 9,500 to the million; while for the year 1904 the number of secondary students aggregated 776,635, or about 10,100 to the million population, or over 1 per cent. The following table makes the comparison for each year since 1890:

Secondary students and per cent of population.

Year.	In public institutions.		In private institutions.		In both classes.	
	Secondary students.	Per cent of population.	Secondary students.	Per cent of population.	Secondary students.	Per cent of population.

Digitized by Google

The remainder of this chapter will be devoted to a presentation of the statistics of the 8,836 public and private high schools reporting to this Office for the year 1903–4. While the number of secondary students in the preparatory departments of colleges and other institutions is given above, it has been found impracticable to collect complete statistics of such departments. The following table shows the progress of public and private high schools since 1890:

Public and private high schools since 1889–90.

Year reported.	Public.			Private.			Total.		
	Schools.	Teachers.	Students.	Schools.	Teachers.	Students.	Schools.	Teachers.	Students.
1889–90	2,526	9,120	202,963	1,632	7,209	94,931	4,158	16,329	297,894

1897–98	5,315	17,941	449,600	1,990	9,357	105,225	7,305	27,298	554,825
1898–99	5,495	18,718	476,227	1,957	9,410	103,838	7,452	28,128	580,065
1899–1900	6,005	20,372	519,251	1,978	10,117	110,797	7,983	30,489	630,048
1900–1901	6,318	21,778	541,730	1,892	9,775	108,221	8,210	31,553	649,951
1901–2	6,292	22,415	550,611	1,835	9,903	104,690	8,127	32,318	655,301
1902–3	6,800	24,349	582,213	1,690	9,446	101,847	8,490	33,795	694,060
1903–4	7,230	26,760	635,808	1,606	9,566	103,407	8,836	36,326	739,215

The remarkable growth of public high schools in the last fourteen years is shown in the above table. In 1890 there were 2,526 public high schools, with 202,963 students, while in 1904 the number of schools had increased to 7,230, with 635,808 students. The number of private high schools increased up to 1895. Since that date there has been a decrease, the number reporting in 1904 being 1,606, with 103,407 students. The number of these private schools is now less than in 1890, although the number of students is considerably greater. The relative progress of public and private high schools since 1890 may be learned from the following table:

Relative progress of public and private high schools in fourteen years.

Year reported.	Per cent of number of schools.		Per cent of number of teachers.		Per cent of number of students.	
	Public.	Private.	Public.	Private.	Public.	Private.
1889–90	60.75	39.25	55.85	44.15	68.13	31.87
1890–91	61.78	38.22	57.03	42.97	68.26	31.74
1891–92	66.19	33.81	57.42	42.58	70.40	29.60
1892–93	66.23	33.77	60.25	39.75	70.78	29.22
1893–94	66.67	33.33	60.21	39.79	70.91	29.09
1894–95	68.37	31.63	62.26	37.74	74.74	25.26
1895–96	70.25	29.75	64.21	35.79	78.11	21.89
1896–97	70.87	29.13	63.71	36.29	79.18	20.82
1897–98	72.76	27.24	65.72	34.28	81.03	18.97
1898–99	73.74	26.26	66.55	33.45	82.10	17.90
1899–1900	75.22	24.78	66.82	33.18	82.41	17.59
1900–1901	76.95	23.05	69.02	30.98	83.35	16.65
1901–2	77.42	22.58	69.36	30.64	84.02	15.98
1902–3	80.04	19.96	72.05	27.95	85.33	14.67
1903–4	81.82	18.18	73.67	26.33	86.01	13.99

From the above table it is seen that in 1890 about 68 per cent of the secondary students were in the public high schools and in 1904 over 86 per cent.

PUBLIC HIGH SCHOOLS.

The more important items of public high school statistics are summarized by States in Tables 1 to 15 in this chapter. Information in detail concerning the 7,230 schools is given in Table 43.

Digitized by Google

Table 1 shows that there were 26,760 teachers of secondary students in the 7,230 public high schools in 1903–4. This force included 12,825 men and 13,935 women. Of the 635,808 secondary students, 266,039 were boys and 369,769 girls. There was an increase of 20,268 in the number of boys and 23,327 in the number of girls in these schools over the preceding year. In the elementary grades connected with the high schools there were 143,422 pupils.

Table 2 shows that 34,307 students were preparing for the college classical course and 26,300 for college scientific courses. The number of graduates for the year ending June, 1904, was 75,476, an increase of 5,485 over the preceding year. Of the total number of graduates, 25,801 were college preparatory students, an increase of 2,914. The schools had 9,208 in military drill.

Tables 3 to 11, inclusive, show the number of students in each State in each of the leading high school studies. A synopsis of these tables is given below, preceded by items relating to the number of students preparing for college and the number of graduates.

Students in certain courses and studies in public high schools.

Courses, studies, etc.	Number of students.	Per cent of total number.	Male students.	Per cent of total number of male students.	Female students.	Per cent of total number of female students.
Students preparing for college:

[a] Per cent of total number of graduates.

The total number preparing for college was 60,607, an increase of 2,467 over the preceding year. The total number of graduates was 75,476, almost 12 per cent of the total number of students. Over 34 per cent of the graduates were college preparatory students.

It is shown that 323,028 students were studying Latin. This was more than half the total enrollment. Only 11,158 were studying Greek, less than 2 per cent of the total enrollment. It is somewhat misleading to make a comparison between the 323,028 students in Latin (50.81 per cent of the total enrollment) and the 11,158 students in Greek (1.75 per cent of the total enrollment). Where both languages are taught students have the opportunity of studying Latin four years and Greek the last year of the course.

It is estimated that there were 273,398 students in the first year of the public high schools, 165,310 in the second year, 114,445 in the third, and 82,655 in the fourth

Digitized by Google

year in 1904. If all the schools offered both languages, all the students would have the opportunity of studying Latin, while only 82,655, or the fourth-year students, would have the opportunity to study Greek. Moreover, it is known from Table 3 that 6,369 of the 7,230 schools had students in Latin and only 803 had students in Greek.

The per cent of students in each of the leading high school studies reported annually for the past eleven years is given in the table which follows:

Per cent of total number of secondary students in public high schools in certain courses and studies, etc.

Students and studies.	1893–94	1894–95	1895–96	1896–97	1897–98	1898–99	1899–1900	1900–1901	1901–2	1902–3	1903–4

[a] Per cent of total number of graduates.

The statistics of public high schools in cities of 8,000 population and over are compared with statistics for public high schools outside of such cities in Tables 12, 13, and 14. In the cities named there were 794 schools with 297,249 students, while the remaining 6,436 high schools outside of such cities had 338,559 students.

Table 15 is an exhibit of the equipment and income of public high schools in each State, so far as the information could be obtained. In most cases the accounts of high schools are not separated from the accounts of public-school systems, and for this reason no satisfactory aggregate can be obtained or estimated as to the income of all the public high schools.

Of the 7,230 public high schools, 6,656 reported libraries aggregating 4,107,086 volumes, and 6,654 had property aggregating $157,771,530 in value. Only 2,184 schools reported receipts from public appropriations amounting to $8,187,279.

PRIVATE HIGH SCHOOLS AND ACADEMIES.

The statistics of private high schools, academies, and seminaries are summarized in Tables 16 to 29. Tables 16 to 26, inclusive, are similar to Tables 1 to 11, relating to public high schools, and may be compared with those tables. Tables 27 and 15

Digitized by Google

may also be compared. Comparisons of certain averages computed for public and private high schools are made in Table 30.

The number of private high schools reporting to this Office for 1903–4 was 1,606. These schools had 9,566 teachers of secondary students and 103,407 secondary students—51,599 males and 51,808 females. Of the secondary students 22,204 were preparing for college, 12,683 for the classical course, and 9,521 for scientific courses. There were 12,248 graduates in 1904, of whom 5,328 had prepared for college. There were 9,750 students in military drill.

The number of students in each of the leading high-school studies in each State will be found by consulting Tables 18 to 23. The percentages of students in each course and study are given in Tables 24 to 26. The following table is a synopsis of the number and per cent of students, by sex, in college preparatory courses, the number and per cent of graduates, and the number and per cent in each of the high-school studies in private secondary schools for the scholastic year ending June, 1904:

Students in certain courses and studies in private high schools and academies.

Courses, studies, etc.	Number of students.	Per cent of total number.	Male students.	Per cent of total number of male students.	Female students.	Per cent of total number of female students.

[a] Per cent of total number of graduates.

The preceding table shows that over 21 per cent of the students in private secondary schools were preparing for college. Less than 10 per cent of public high-school students were making such preparation. The per cent of students in Latin was nearly 45, as compared with nearly 51 per cent in the public high schools. In Greek the private high schools had about 7 per cent, as compared with 1.75 per cent in the public high schools.

The increased percentages in certain courses and studies, as shown in the following synopsis, indicate the progress made by private secondary schools in the last ten years:

[a] Per cent of number of graduates.

Table 27 shows the value of equipment, income, benefactions, endowments, etc., of private high schools, academies, and seminaries. The number of volumes in the libraries of 1,305 schools was 2,955,420. The value of the property of 1,179 aggregated $69,513,391. Tuition fees amounting to $6,734,365 were received by 939 schools.

Religious denominations control 828 of the 1,606 schools. Tables 28 and 29 show the number of schools in each State controlled by each leading denomination. In Table 44, which gives in detail the statistics of private secondary schools, the name of the denomination controlling each is given in column 4. The following is a synopsis of Tables 28 and 29:

Religious denomination and nonsectarian.	Schools.	Instructors.	Students.
Nonsectarian	778	4,606	49,089
Roman Catholic	347	2,006	17,369
Baptist	69	371	6,398

COMBINED STATISTICS.

The combined statistics of public and private secondary schools are given in Tables 31 to 38. Certain comparisons are made in Table 30. The following synopsis is condensed from these tables:

Students in certain courses and studies in public and private high schools and academies.

Courses, studies, etc.	Number of students.	Per cent of total number of secondary students.	Male students.	Per cent of total number of male students.	Female students.	Per cent of total number of female students.
Students preparing for college:						
Classical course	46,990	6.36	22,837	7.19	24,158	5.78
Scientific courses	35,821	4.84	23,243	7.32	12,578	2.98
Total preparing for college	82,811	11.20	46,080	14.51	36,781	8.71
Graduating in 1904	87,724	11.87	33,865	10.66	53,859	12.78
College preparatory students in graduating class	31,129	[a] 35.49	16,463	[a] 48.61	14,666	[a] 27.23
Students in—						
Latin	369,329	49.96	149,030	46.92	220,299	52.26

[a] Per cent of total number of graduates.

The total number of public and private high schools reporting was 8,836, with 36,326 secondary instructors and 739,215 secondary students. Of the aggregate, 317,638, or 43 per cent, were males, and 421,577, or 57 per cent, were females. There were 82,811 college preparatory students, or over 11 per cent of the whole. The graduates for 1904 numbered 87,724, or nearly 12 per cent of the enrollment for the school year. The number of graduates prepared for college was 31,129, or over 35 per cent of the number graduating.

The following synopsis showing the percentage of students in certain studies from year to year will indicate the progress made by the secondary schools of the country in the past ten years:

Per cent of the total number of secondary students in public and private high schools and academies in certain courses and studies, etc.

Students and studies.	1893–94	1894–95	1895–96	1896–97	1897–98	1898–99	1899–1900	1900–1901	1901–2	1902–3	1903–4

In 1889–90 there were 100,152 students in public and private secondary schools studying Latin. This was 33.62 per cent of the total enrollment of secondary students in these schools for that year. In 1903–4 the number had increased to 369,329, or almost 50 per cent of the total number of high school students. Since 1890 the per cent of secondary students in algebra has increased from 42.77 per cent to 56.23 per cent in 1903–4. Percentages for other studies for eleven years are shown in the above table.

DISTRIBUTION OF SECONDARY STUDENTS.

From an examination of the enrollment of secondary students by grades in the high schools of a number of cities it appears that 43 per cent of the enrollment was in the first year, 26 per cent in the second, 18 per cent in the third, and 13 per cent in the fourth or graduating year. Upon this basis the following estimate may be made:

Secondary students in 1903–4	822,235
43 per cent in first year	353,561
26 per cent in second year	213,781
18 per cent in third year	148,002
13 per cent in fourth year	106,891

Tables 39 and 40 show by States and divisions the distribution of the 822,235 secondary students in the eight classes of institutions mentioned on the first page of this chapter.

Table 41 compares the number of students in secondary education with the total population. The number of secondary students to each 1,000 of population in 1904 was 10.12. The number of students in institutions of learning above the high school was 253,612, or 3.12 to the 1,000 population. This number includes all students who in 1903–4 were receiving higher instruction in universities and colleges, all professional students, including those in theology, law, medicine, dentistry, pharmacy, and veterinary medicine, and all in training courses for teachers in normal schools. Students in nurse-training schools, business schools, and in schools for the defective classes are not here included as in either secondary or higher education.

Of the public high schools of the country there were 34 for boys only and 29 for girls only, all the others being coeducational. Of the private high schools there were 318 for boys only, 497 for girls only, and 791 coeducational. These comparisons are made by States in Table 42. Tables 43 and 44 give in detail the statistics of public and private secondary schools.
